Module Handbook
Mechatronics and Information Technology Master 2015
(Master of Science (M.Sc.))
SPO 2015
Summer term 2023
Date: 06/03/2023
Table Of Contents

1. Description of the degree program ................................................................................................................................................................................................. 11
2. Goals, structure and acquisition of competences ........................................................................................................................................................................ 18
3. Field of study structure......................................................................................................................................................................................................... 22
   3.1. Master's Thesis ............................................................................................................................................................................................................... 22
   3.2. General Mechatronics ................................................................................................................................................................................................ 22
   3.3. Field of Specialization ................................................................................................................................................................................................ 23
       3.3.1. Field of Specialization: Automotive Engineering .................................................................................................................................................... 23
       3.3.2. Field of Specialization: Power Engineering ....................................................................................................................................................... 24
       3.3.3. Field of Specialization: Microsystems Technology ........................................................................................................................................... 25
       3.3.4. Field of Specialization: Medical Technology .................................................................................................................................................. 26
       3.3.5. Field of Specialization: Industrial Automation .................................................................................................................................................. 27
       3.3.6. Field of Specialization: Control Engineering in Mechatronics ................................................................................................................................. 28
       3.3.7. Field of Specialization: Robotics ................................................................................................................................................................. 29
       3.3.8. Field of Specialization: Design of Mechatronic Systems ................................................................................................................................. 30
   3.4. Interdisciplinary Subject ................................................................................................................................................................................................ 31
   3.5. Interdisciplinary Qualifications .................................................................................................................................................................................. 36
   3.6. Additional Examinations ......................................................................................................................................................................................... 37
4. Notes on modules and courses.................................................................................................................................................................................................. 40
5. Publisher ......................................................................................................................................................................................................................... 41
6. Modules................................................................................................................................................................................................................................. 42
   6.1. Actuators and Sensors in Nanotechnology - M-MACH-102698 ............................................................................................................................ 42
   6.2. Advanced Artificial Intelligence - M-INFO-106299 ................................................................................................................................................ 44
   6.3. Analog Circuit Design - M-ETIT-100466 ........................................................................................................................................................ 45
   6.4. Antennas and Multiple Antenna Systems - M-ETIT-100565 .............................................................................................................................. 46
   6.5. Appliance and Power Tool Design - M-MACH-102705 ...................................................................................................................................... 47
   6.6. Applied Information Theory - M-ETIT-100444 ................................................................................................................................................ 49
   6.7. Artificial Intelligence in Production - M-MACH-105968 ..................................................................................................................................... 50
   6.8. Automated Manufacturing Systems - M-MACH-105108 ..................................................................................................................................... 51
   6.10. Automotive Engineering I - M-MACH-100501 ................................................................................................................................................ 53
   6.11. Automotive Engineering II - M-MACH-100502 ................................................................................................................................................ 54
   6.15. Batteries and Fuel Cells - M-ETIT-100532 ......................................................................................................................................................... 59
   6.16. Batteries and Fuel Cells Laboratory - M-ETIT-100381 ........................................................................................................................................ 60
   6.17. Battery and Fuel Cells Systems - M-ETIT-100377 ........................................................................................................................................ 61
   6.18. Bioelectric Signals - M-ETIT-100549 ................................................................................................................................................................. 62
   6.20. Biomedical Measurement Techniques I - M-ETIT-100387 .................................................................................................................................. 64
   6.23. BioMEMS - Microsystems Technologies for Life Sciences and Medicine I - M-MACH-100489 ........................................................................ 68
   6.25. BioMEMS - Microsystems Technologies for Life Sciences and Medicine III - M-MACH-100491 .............................................................. 70
   6.27. BUS-Controls - M-MACH-105286 .............................................................................................................................................................. 72
   6.28. CAE-Workshop - M-MACH-102684 ............................................................................................................................................................. 73
   6.29. Channel Coding: Algebraic Methods for Communications and Storage - M-ETIT-105616 ........................................................................... 74
   6.31. Communications Engineering II - M-ETIT-105274 .......................................................................................................................................... 76
   6.32. Communications Engineering Laboratory - M-ETIT-100442 ...................................................................................................................... 77
   6.33. Computational Intelligence - M-MACH-105296 ............................................................................................................................................ 78
   6.34. Continuum Mechanics - M-MACH-105180 ..................................................................................................................................................... 79
   6.35. Control of Linear Multivariable Systems - M-ETIT-100374 ............................................................................................................................ 80
   6.36. Control of Power-Electronic Systems - M-ETIT-105915 ................................................................................................................................. 81

## Courses

7. Actuators and Sensors in Nanotechnology - T-MACH-105238 .......................................................................................................................... 310
7.1. Advanced Artificial Intelligence - T-INFO-112768 ................................................................................................................................. 311
7.3. Analog Circuit Design - T-ETIT-100973 ........................................................................................................................................ 312
7.4. Antennas and Multiple Antenna Systems - T-ETIT-106491 .................................................................................................................. 313
7.5. Antennas and Multiple Antenna Systems - T-MACH-105229 .............................................................................................................. 314

1. Description of the degree program

1.1. List of abbreviations

Departments:  
ETIT KIT Department of Electrical Engineering  
and Information Technology  
KIT-Fakultät für Elektrotechnik und Informationstechnik

MACH KIT Department of Mechanical Engineering  
KIT-Fakultät für Maschinenbau

INFO KIT Department of Informatics  
KIT-Fakultät für Informatik

CIW KIT Department of Chemical and Process Engineering  
KIT-Fakultät für Chemieingenieurwesen und Verfahrenstechnik

PHYS KIT Department of Physics  
KIT-Fakultät für Physik

WIWI Department of Economics and Management  
KIT-Fakultät für Wirtschaftswissenschaften

Semester:  
WS winter term (Wintersemester)  
SS summer term (Sommersemester)

Achievements:  
V Lecture (Vorlesung)  
Ü Exercise (Übung)  
P Laboratory (Praktikum)  
CR Credit Points (Leistungspunkte)  
Pr Examination (Prüfung)

Miscellaneous:  
B.Sc. Degree program (Studiengang) Bachelor of Science  
M.Sc. Degree program (Studiengang) Master of Science  
SPO Study and examination regulations  
(Studien- und Prüfungsordnung)  
SWS contact hours per week (Semesterwochenstunden)
1.2. Subjects

The legal basis for the degree program and the conduct of examinations are the currently valid Study and Examination Regulations (Studien- und Prüfungsordnung, SPO) (https://www.mach.kit.edu/Master-MIT.php?tab=%5B3687%5D#tabpanel-3687).

The program degree M.Sc. Mechatronics and Information Technology consists of the following subjects, which are explained in more detail in this chapter. A detailed list of the corresponding modules can be found in the chapter “Structure of degree program”.

- General Mechatronics: 32 CR
- Field of Specialization: 35 CR
- Interdisciplinary Subject: 17 CR
- Interdisciplinary Qualifications: 6 CR
- Master’s Thesis: 30 CR

In total: 120 CR

General Mechatronics

This subject consists of compulsory modules that must be completed by the students. In the modules “Technische Mechanik” and “Werkstoffe” there are elective options.

Field of Specialization

Students choose a Field of Specialization from the following list. Each field includes 35 credit points:

- Automotive Engineering (Fahrzeugtechnik)
- Power Engineering (Energietechnik)
- Microsystems Technology (Mikrosystemtechnik)
- Medical Technology (Medizintechnik)
- Industrial Automation (Industrieautomation)
- Control Engineering in Mechatronics (Regelungstechnik in der Mechatronik)
- Robotics (Robotik)
- Design of Mechatronic Systems (Konstruktion Mechatronischer Systeme)

In addition to the compulsory modules, each Field of Specialization contains supplementary modules, which can be compiled from the list of courses given. The minimum number of 35 credit points required for the Field of Specialization must be achieved (or can be exceeded once). If necessary, several modules from the list of selectable supplementary modules must be combined.

The list of supplementary modules may be subject to adjustments resulting from the departure of teaching staff, the reorganization of courses and other circumstances. Therefore, the module list in the module handbook is adjusted to current conditions before each semester. In principle, students can choose all supplementary modules for their study plan that are included in the recent module handbook. Omitted modules cannot be started any more. If they have already been taken, they will of course remain valid. Exams will be offered two additional terms after the course was given at last.

Modules that have already been taken in the program of the Bachelor’s degree in Mechatronics and Information Technology or in related programs cannot be selected as supplementary
modules in the Master’s degree program. If a compulsory module has already been taken in the Bachelor’s degree program, it will be replaced by a supplementary module of the chosen Field of Specialization.

If there is demonstrably no place available in all the selectable internships of the desired Field of Specialization, then, as an exception, an internship of a different Field of Specialization, that is suitable in terms of content, can be selected. This requires the approval of a program consultant (https://www.mach.kit.edu/1982.php?tab=%5B2693%5D#tabpanel-2693).

Students who have already chosen a Field of Specialization that is no longer offered in the current curriculum, please refer to previous module handbooks in the archive (https://www.etit.kit.edu/modulhandbuecher_archiv.php).

**Interdisciplinary Subject**

The Interdisciplinary Subject consists of modules in the amount of 17 CR. If 17 CR cannot be achieved through the choice of modules exactly, overbooking by a maximum of one module is possible. The modules can be freely chosen by the students from the modules listed below. Other courses of the Master’s degree programs in Electrical Engineering and Information Technology, Mechanical Engineering, or Informatics/Computer Science can be chosen after application at the Program Service Master. The chosen modules should fit thematically to the Field of Specialization and at most one practical course and one seminar should be chosen.

Particularly in the case of courses offered by the KIT Department of Informatics, the consent of the lecturer(s) must be obtained before a module is included in the Interdisciplinary Subject. In the process, it must also be clarified whether the students have the necessary subject-specific prerequisites for the selected module. This matching is the responsibility of the student.

In the Interdisciplinary Subject, no module can be selected, which has already been selected in the Field of Specialization or which has already been examined in the Bachelor’s degree program in Mechatronics and Information Technology or in related degree programs.

The choice of supplementary modules in the Field of Specialization and modules in the Interdisciplinary Subject is made electronically in Campus Management Portal (https://campus.studium.kit.edu/english/index.php).

**Interdisciplinary Qualifications**

Interdisciplinary Qualifications are modules with a predominantly non-technical content; these must be completed with an evaluated proof of credit points. The module “*Das Arbeitsfeld des Ingenieurs*” (2 CR) is already fixed. The other modules in the amount of 4 CR can be selected from the range of events offered by KIT.

For example, courses from the following areas are recommended: Management, Entrepreneurship, Business Administration, Law, Patents. Typically, these are courses from the HOC, ZAK, and Language Center (SPZ), as well as Interdisciplinary Qualifications offered by the KIT Department of Electrical Engineering and Information Technology and the KIT Department of Mechanical Engineering. Further Interdisciplinary Qualifications can be acquired within the subject “Additional Examinations”.
Achievements can be booked in the module “Key Competences (Schlüsselqualifikationen)” by the students themselves. Students can access the module via the menu item “Examinations – Exam Registration and Unregistration” at the Campus Management Portal, which is also used to access the study schedule. Here you will find a tab “ÜQ/SQ-Leistungen”, which displays the list of unassigned own achievements.

In the following, the taken Interdisciplinary Qualifications have to be assigned to the courses (Teilleistungen) of HoC, ZAK or SPZ with the title “Self Assignment-HOC-SPZ-ZAK...” according to the grading scale, graded or ungraded. Title and credits of the achievement are adopted automatically.

4. Term: Master’s Thesis (30 CR)

Exemplary curriculum in the Field of Specialization Industrieautomation

1. Term (WS)
- PF: M-ETIT-102652 Measurement Technology 5 CR writ.
- VF: M-INFO-100893 Robotik I - Einführung in die Robotik 6 CR writ.
- IF: M-ETIT-100399 Schaltungstechnik in der Industrieelektronik 3 CR oral
- IF: M-ETIT-105915 Regelung leistungselectronischer Systeme 6 CR oral

Number of CR: 30
Number of oral examinations: 2
Number of written examinations: 4
2. Term (SS)
PF: M-MATH-105831 Numerical Methods 5 CR writ.
PF: T-MACH-109192 Methoden und Prozesse der PGE 6 CR writ.
PF: T-MACH-100531 Systematische Werkstoffauswahl 5 CR writ.
VF: M-MACH-104983 Plug-and-Play Fördertechnik 4 CR other type
VF: M-MACH-105281 Informationssysteme in Logistik und Supply Chain Management 3 CR oral
VF: M-MACH-105286 BUS-Steuerungen 4 CR oral
ÜQ: M-MACH-102755 Das Arbeitsfeld des Ingenieurs 2 CR writ.

Number of CR: 29
Number of oral examinations: 2
Number of written examinations: 4
Number of examinations of other types: 1

3. Term (WS)
PF: T-ETIT-100666 Regelung linearer Mehrgrößensysteme 6 CR writ.
VF: M-MACH-105296 Computational Intelligence 4 CR writ.
VF: M-MACH-104984 Materialfluss in Logistiksystemen 9 CR other type
IF: M-MACH-102692 Elektrische Schienenfahrzeuge 4 CR oral
IF: M-ETIT-100417 Hochspannungsprüftechnik 4 CR oral
ÜQ: Überfachliche Qualifikationen 4 CR other type

Number of CR: 31 CR
Number of oral examinations: 2
Number of written examinations: 2
Number of examinations of other types: 2

4. Term (SS)
MT: Master’s Thesis 30 CR

Number of CR: 30
Number of oral examinations: -
Number of written examinations: -

Total number of examinations: 19

1.4. Additional Examinations

According to SPO Article 15, additional examinations can be acquired, that may result in up to 30 credit points more than required for passing the Master’s examination. When registering for an examination in a module, this must already be declared as an additional examination. The assignment of a module can be changed again later on request. Additional examinations are not included in the overall grade, but are listed in the Transcript of Records.

1.5. Recognition of external study achievements

The basic rules for the recognition of external achievements (credits and grades) can be found in the study and examination regulations:
- Bachelor SPO 2016 of 03-05-2016, Article 19 and changes of 28-09-2018, Article 19
- Master SPO 2015 of 10-07-2015, Article18 and correction of 30-06-2016

According to these regulations, the achievements required in the curriculum can also be achieved through recognition of external credits and grades.
External achievements may be acquired as follows:
1. within the higher education system (worldwide)
2. outside the higher education system (at institutions with standardized quality assurance systems; recognition may be denied if more than 50 percent of the curriculum are to be substituted)

Recognition is granted upon application by the student. With regard to the acquired competencies, it must be ensured that there is no significant difference to the achievements or degrees that are to be replaced. The application must be submitted within the first semester after enrollment at KIT.

The examination board is responsible for recognition and crediting and involves the responsible program consultant in the decision. Recognized credits and grades that were not achieved at KIT are shown as “recognized” in the transcript of records.

There are two options for recognition:
- **Recognition instead of a KIT event**
  An event taught at KIT is replaced by the recognized event. The examination whether the acquired competences are equivalent to the KIT event is carried out by the subject examiner who conducts the event to be replaced at KIT.
- **Recognition of the original event**
  The event will be recognized with the original title. The course can be taken in the Interdisciplinary Subject, in the Interdisciplinary Qualifications, or in the Additional Examinations. The examination whether the acquired competences justify a recognition is carried out by the program consultant.

Experience has shown that recognition “instead of” is difficult, because the competencies taught in courses are usually determined by the lecturer and are rarely the same at other universities. Recognition of “the original”, on the other hand, only checks whether the competencies acquired are appropriate to a university course.

If a comparable grading system is used, the grade of the performance to be recognized is taken over. If the grading system is not comparable, the grade will be converted. Examination which are to be recognized instead of a graded examination must also be graded.

The exact procedure is described at “Richtlinien zur Anerkennung von Studien- und Prüfungsleistungen im Studiengang Mechatronik und Informationstechnik” (in German: https://www.mach.kit.edu/Master-MIT.php?tab=%5B3682%5D#tabpanel-3682).

### 1.6. Semester abroad and student mobility

The KIT departments support and promote stays abroad. For this purpose, there are a number of partnerships with foreign universities. Please contact the departments for up-to-date information. However, students are also encouraged to contact foreign universities on their own.

It is advisable to complete most of the compulsory modules in General Mechatronics and in the Field of Specialization before the stay abroad. The work done at the foreign institution can then be recognized in the Interdisciplinary Subject and in the Interdisciplinary Qualifications. Therefore, the third semester is well suited for a stay abroad.

Prior to the stay abroad, the achievements to be made at the foreign university are fixed in a written Learning Agreement. The current form and detailed information can be found on the websites of the KIT Department of Electrical Engineering and Information Technology.
1.7. Calculation of grades

The module grades in General Mechatronics, the Field of Specialization, and the Interdisciplinary Subject are weighted with the corresponding credit points to form the overall grade. The calculation of grades is based on the regulations of the study and examination regulations, Article 7, paragraph 4, 7, and 9 as well as Article 2, paragraph 2.

1.8. Master’s Thesis

The Master’s Thesis should demonstrate that the student is able to work on a problem from the field of mechatronics and information technology independently and within a limited time, using scientific methods that correspond to the state of the art in research. The module Master’s Thesis is assigned to 30 credit points. It consists of the Master’s Thesis and a final presentation of the results. The presentation has to take place within the preparation of the Master’s Thesis.

The prerequisite for admission to the module Master’s Thesis is that the student is usually in the 2nd year of study and has successfully completed module examinations in the sum of 75 CR.

The recommended preparation time is four months in full-time. The maximum preparation time is six months.

The Master’s Thesis may be completed at all institutes at the KIT Department of Electrical Engineering and Information Technology and the KIT Department of Mechanical Engineering. Due to the interdisciplinary orientation, the participation of institutes of other faculties is desired. With the approval of the examination board, external Master’s Theses can also be approved, provided that supervision by a university lecturer is guaranteed. The registration of the Master’s Thesis has to be done electronically in the Campus Management by the students themselves (https://campus.studium.kit.edu/english/index.php), but only after consultation and approval by the supervising professor.
2. Goals, structure and acquisition of competences

2.1 Competence Goals

The competence goals of the Master’s degree program Mechatronics and Information Technology are divided into the following four main competence profiles:

1. **Expertise**: Students get to know the fundamentals of the discipline, as well as current research topics, processes, and results.
2. **Research and problem-solving skills**: Students learn the skills and techniques to meet challenges in research and industry.
3. **Assessment and planning skills**: Students participate in professional and research discourse and apply acquired knowledge, as well as learned techniques.
4. **Personal and social skills**: Students work on (their own) research projects, are integrated into a scientific team, are capable of independent and sustained professional and scientific development, and assess the social and societal impact of their activities.

For points 1 and 2 the focus is on lecturer activity, for points 3 and 4 correspondingly on student activity.

For the Master’s degree program, these competence requirements can be further described in the following objectives:

**A – Expert knowledge**: The graduates of the Master’s degree program Mechatronics and Information Technology

1. have an in-depth knowledge of mathematics and physics and an advanced expert knowledge of electrical and mechanical engineering as well as information technology. They are able to recognize and evaluate demanding technical and scientific tasks and problems in mechatronics and information technology and to formulate approaches to solve them.
2. master demanding scientific methods of their discipline and have learned to use them to analyze identified problems or subject-related issues according to the state of their knowledge.
3. possess in-depth knowledge in a combination of the core competences of mechatronics and information technology (e.g. automation and control technology, electrical energy systems, high-voltage technology, electrical drives, power electronics, digital technology, information technology, digital signal processing, communications engineering, high-frequency technology, measurement technology, imaging techniques, lighting technology, optoelectronics, circuitry, microelectronics, optical communication systems, materials science, construction and product development, engineering mechanics, robotics, modern software techniques).

**B – Research and problem-solving skills**: The graduates of the Master’s degree program Mechatronics and Information Technology

1. are qualified to work as engineers and scientists in one of the main application fields of mechatronics and information technology (e.g. Automotive Engineering, Power Engineering, Automation Technology, Industrial Handling, Microsystems Technology, Medical Technology).
2. are familiar with the procedures for the analysis and design of components, circuits, systems, and equipment in mechatronics.
3. are familiar with advanced methods of presenting and processing information, programming, algorithmic formulation of processes, and the use of programming tools.
4. possess an in-depth understanding of the methods of mechatronics and information technology.
5. are capable of further qualification through a doctorate program (PhD).
C – Assessment and planning skills: The graduates of the Master’s degree program Mechatronics and Information Technology
1. can evaluate mechatronic designs based on elements of electrical and mechanical engineering as well as information technology, using various solution alternatives.
2. recognize limits of the validity of theories and solutions in a wide variety of applications and new developments.
3. can critically question results and transfer solutions to other areas of application.

D – Personal and social skills: The graduates of the Master’s degree program Mechatronics and Information Technology
1. are familiar with independent project work as well as interdisciplinary teamwork, are able to grasp the results of others, and are able to communicate their own and team results in writing and orally.
2. are able to familiarize themselves independently with new and complex subject areas in technical sciences and their methods.
3. are able to work scientifically on research-related problems and develop complex assemblies or systems.
4. possess a deeper understanding of applications of mechatronics and information technology in various fields of work, know the limits and dangers involved, and apply their knowledge responsibly and for the benefit of society, taking safety and ecological requirements into account. They actively contribute to the opinion-forming process in society with regard to scientific and technical issues.
5. are able to communicate and cooperate with specialists in an interdisciplinary manner.

2.2 Conformity of module structure with competence goals

The Master’s degree program is structured according to the following concept:

- Teaching of basic engineering knowledge within the compulsory subject of General Mechatronics in the first two terms to the extent of 32 credit points. Included are basic modules that convey the basic scientific knowledge of mechatronics, e.g. numerical mathematical methods, multibody dynamics, product development, methods of product engineering, materials selection, measurement technology, control engineering.

- Intensive specialization in an area of choice. For this purpose, eight Fields of Specialization with a total of 35 credit points are offered. Each Field of Specialization consists mainly of compulsory modules (core modules), which are specified according to the chosen Field of Specialization. In addition, further courses (supplementary modules) of the areas electrical and mechanical engineering as well as information and computer technology are offered, which the students can compile themselves.

- Further specialization is possible within the framework of the Interdisciplinary Subject (17 credit points). The modules of the Interdisciplinary Subject are compiled by the students from the master’s courses of the areas electrical and mechanical engineering as well as information and computer technology.

- The range of specific elective modules – some are held by lecturers from renowned research institutions and industry – is very large. To provide a flexible offer, some modules are designated with less than 5 credit points. This is explicitly supported by the student representatives.

- The final module composition should be coherent in content and must be approved by the program consultant.
During the preparation of their Master’s thesis, students are guided to conduct independent scientific research.

The final choice of the individual Field of Specialization may be accomplished in the second or third term, as illustrated in the following table:

<table>
<thead>
<tr>
<th>Term</th>

</tr>
</tbody>
</table>

An essential fundamental component of the Master’s degree program is the great freedom that students are given in the selection of elective modules, the Interdisciplinary Qualifications, and the entire scheduling of studies. This way the students’ self and social competence can be optimally promoted.

The structure of the Master’s degree program and its modules thus support the qualification goals, formulated above:
- The fundamentally oriented courses of the compulsory subject Mechatronics are primarily completed in the first two terms. Based on this is the Field of Specialization, in which students can choose from one of eight specializations. The courses in the Field of Specialization are mainly held in the second and third term. At the same time, starting in the first term, the Interdisciplinary Qualifications are completed.
- Finally, the fourth term is reserved for the Master’s Thesis.

### 2.3 Acquisition of competences

In the Master’s degree program, the acquisition of interdisciplinary competencies is promoted through seminars, university internships, Interdisciplinary Qualifications, and the Master’s Thesis, as well as through the general organization of the studies.

Most students complete a seminar as part of the Interdisciplinary Subject (seminars are offered by many institutes and are basically structured in the same way). There they specifically learn to conduct independent literature research, have to apply oral and technical presentation skills and prepare documentation. They learn to work in a self-organized and reflexive manner and improve their communicative, organizational, and didactical skills. They have to analyze a topic independently and present it to an expert audience.

In the university’s internships and laboratories (each Field of Specialization contains an internship as a core module), the focus is on imparting expert knowledge and the practical handling of laboratory equipment or software tools. Here, students will sharpen their analytical skills through playful handling of technology and, at the same time, learn how to work together in teams and develop their own ideas and solutions.

The Interdisciplinary Qualifications with an amount of 6 CR are scheduled within the first to third term.
- In the first term, a specific ring course is offered in the Master’s degree program in Mechatronics and Information Technology. Within this course professors impart their professional
experience and practical knowledge in the areas of project management, cooperation with production and marketing, governance, processes, and organization.

In the third term, another specific course is offered in the Master’s degree program, in which students are taught theoretical knowledge as well as practical experience in leading interdisciplinary teams (under guidance). This is done in cooperation with the workshop “Mechatronische Systeme und Produkte” of the Bachelor’s degree program in Mechatronics and Information Technology.

In addition, courses from the KIT-Department of Electrical Engineering and Information Technology, Mechanical Engineering, and other departments or the House of Competence can be chosen. The selected courses must have a predominantly non-technical content and should be related to the future professional field of an engineer. The Interdisciplinary Qualifications are intended to build up competencies in interdisciplinary thinking, in conveying expert knowledge from non-electrical or non-mechanical engineering disciplines, as well as in writing and speaking a foreign language.

The Master’s Thesis, which must be completed in the fourth term, corresponds to 30 CR. Students learn how to apply scientific methods in the development of new ideas and solutions. They train their analytical thinking as well as working efficiently towards a goal under a given timeline. In addition, students learn to organize themselves and their work process effectively. Knowledge gaps are identified and closed. The Master’s Thesis ends with a final presentation of about 20 minutes followed by a discussion (defense). During the preparation of the presentation, the students are guided and supported by their supervisors. The students learn to communicate own and collaboratively developed results in written and oral form. While working on the Master’s Thesis, it is expected to attend the presentations and defenses of fellow students. This trains to communicate and collaborate with specialists in related disciplines.

The ability to work independently, to organize oneself optimally, and to clearly structure even large long-term tasks can hardly be conveyed in a course by simple explanation. In order to enable students to train themselves optimally in this respect, a large degree of freedom in the selection of courses, in the Interdisciplinary Subject, the Interdisciplinary Qualifications, and the entire scheduling of studies is an essential part of the Master’s degree program. Only in this way students can optimally attain self- and social competence.

3.3 Field of Specialization

Field of Specialization (Elect: 1 item)
Field of Specialization: Automotive Engineering 35 CR
Field of Specialization: Power Engineering 35 CR
Field of Specialization: Microsystems Technology 35 CR
Field of Specialization: Medical Technology 35 CR
Field of Specialization: Industrial Automation 35 CR
Field of Specialization: Control Engineering in Mechatronics 35 CR
Field of Specialization: Robotics 35 CR
Field of Specialization: Design of Mechatronic Systems 35 CR

3.3.1 Field of Specialization: Automotive Engineering

Part of: Field of Specialization

Elect notes
In the Field of Specialization "Automotive Engineering" 35 CR must be selected. Through the compulsory modules and according to the chosen internship, there is a remaining number of 5-10 CR for the Complementary Modules.

Please make sure that this number is exactly met or exceeded once. Excess modules will be moved to the Interdisciplinary Subject.

Starting winter term 21/22, "M-ETIT-100514 - Hybride und elektrische Fahrzeuge" will be replaced by "M-ETIT-100532 - Batterien und Brennstoffzellen". The latter is thus omitted in the Complementary Modules.

Students who have already successfully completed "Hybride und elektrische Fahrzeuge", please contact the Program Service Master (master-info@etit.kit.edu) for booking "Batterien und Brennstoffzellen" in the Complementary Modules.

3.3.2 Field of Specialization: Power Engineering

Part of: Field of Specialization

Credits

35

Election notes

In the Field of Specialization "Power Engineering" 35 CR must be selected. Through the compulsory modules and according to the chosen internship, there is a remaining number of 7-10 CR for the Complementary Modules.

Please make sure that this number is exactly met or exceeded once. Excess modules will be moved to the Interdisciplinary Subject.

3.4 Interdisciplinary Subject

<table>
<thead>
<tr>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>17</td>
</tr>
</tbody>
</table>

**Election notes**
The modules can be freely chosen by the students from the modules listed below. Other courses of the Master’s degree programs in Electrical Engineering and Information Technology, Mechanical Engineering, or Informatics/Computer Science can be chosen after application at the Program Service Master. The chosen modules should fit thematically to the Field of Specialization and at most one practical course and one seminar should be chosen. Particularly in the case of courses offered by the KIT Department of Informatics, the consent of the lecturer(s) must be obtained before a module is included in the Interdisciplinary Subject. In the process, it must also be clarified whether the students have the necessary subjectspecific prerequisites for the selected module. This matching is the responsibility of the student.

4 Notes on modules and courses

Level indication for the modules
Level 1 = 1st + 2nd semester Bachelor
Level 2 = 3rd + 4th semester Bachelor
Level 3 = 5th + 6th semester Bachelor
Level 4 = Master

Versions of modules and courses
This specification provides information about the currently valid version of the module or the course. A new version is generated, for example, if an adjustment of the CR was carried out in the module or course. You will automatically receive the valid version in your curriculum. If you have already started a module, you can complete the module in the version you have started (grandfathering).

Course type
Describes the type of competence certificate according to the ETIT study and examination regulations § 4. Competence certificates are subdivided into course works or examinations.

Examinations are graded
1. written examinations,
2. oral examinations, or
3. examinations of another type

Course works are ungraded written, oral, or practical achievements that students usually complete during the course.

Events (lectures, exercises, tutorials, seminars)
In the chapter “Courses” the corresponding events of the current and the previous semester are shown in tabular form. For modules that are not offered every semester, you will thus receive complete information on the associated courses.

Registration and admission to module examinations
In order to take module examinations, students must register for the examination online in the student portal.

In exceptional cases, registration may be made in written form at the Studierendenservice (Student Services) or at another facility authorized by the Studierendenservice. Registration deadlines for the competence certificates may be set by the examiners.

Where elective options exist, students make a binding declaration of module choice when registering for the examination. Upon application of the student to the examination board, the choice or assignment may be changed subsequently. Each module and competence certificate may be assessed only once in the same degree program.

An examination will be passed, if the grade is at least “sufficient” (4.0).

A module will be passed if all required courses are passed.

Mandatory

| T-MACH-105238 | Actuators and Sensors in Nanotechnology | 4 CR | Kohl |

Competence Certificate
oral exam: 45 min

Prerequisites
keine

Competence Goal
- Knowledge of the principles of actuation and sensing
- Knowledge of important fabrication technologies
- Explanation of typical properties (time constants, sensitivities, forces, etc.)
- Explanation of layout and function of the actuators and sensors

Content
- Physical principles of actuation and sensing
- Scaling and size effects
- Fabrication technologies
- Selected developments
- Applications

The lecture includes amongst others the following topics:
- Nano technologies
- Nano electro mechanical systems (NEMS)
- Nano magneto mechanical and multiferroic systems
- Polymer-based nano actuators
- Nano motors, molecular systems
- Adaptive nano optical systems
- Nanosensors: concepts, materials, fabrication
- Examples on different categories of materials and applications:

- C-based, MeOx-based nano sensors
- Physical, chemical, biological nano sensors
  - Multivariant data analysis / interpretation

Workload
Time of attendance: 15 * 1,5 h = 22,5 h
Preparation and follow up: 15 * 5,5 h = 82,5 h
Exam Preparation and Exam: 15 h
Total: 120 h = 4 LP
Recommendation
The lecture addresses students in the fields of mechanical engineering, mechatronics and information technology, materials science and engineering, physics, electrical engineering and economic sciences. A comprehensive introduction is given in the basics and current developments on the nanoscopic length scale.

</table>

**Mandatory**

| T-ETIT-106491 | Antennas and Multiple Antenna Systems | 5 CR | Zwick |

**Competence Certificate**
The success control takes place within the framework of an oral overall examination (20 minutes).

**Prerequisites**
The "Antenna and Multiple Antenna Systems" module must not be started or completed.

**Competence Goal**
The students have in-depth knowledge of antennas and antenna systems. This includes functionality, calculation methods but also aspects of practical implementation. You will be able to understand how any antenna works and to develop and dimension antennas with specified properties.

**Content**
The lecture teaches the basics of field theory as well as the functioning of all essential antenna structures. The functionality of antenna arrays is also visualized using Matlab exercises. Furthermore, antenna measurement methods are taught, as well as an insight into modern antenna and multi-antenna systems. In addition, a practice-oriented workshop on computer-aided design and simulation of antennas is carried out, in which the students learn to use the software tool CST and thus carry out antenna design tasks independently. Individual antennas are then set up and measured so that the students get to know the entire process.

**Module grade calculation**
The module grade is the grade of the oral exam.

**Workload**
Each credit corresponds to approximately 30 hours of work (of the student). This is based on the preferred student who achieves an average performance. The workload includes:

- Attendance study time lecture / exercise: 30 h
- Attendance study time computer exercise CST / MATLAB: 30h
- Self-study time including exam preparation: 90 h

A total of 150 h = 5 LP
6.5 Module: Appliance and Power Tool Design [M-MACH-102705]

**Responsible:** Prof. Dr.-Ing. Sven Matthiesen

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Internships)
Interdisciplinary Subject

</tbody>
</table>

**Competence Certificate**

Oral exam: Duration ca. 40 min.
Final presentation with the results of the project work. 15 min. presentation, 10 min discussion

**Prerequisites**

None

**Competence Goal**

The students are able to ...

- analyze complex and contradictory problems regarding the overall system user–machine and hence to create new solutions with focus on customer use.
- list, to identify and to explain strategies and approaches for the design of technical machines, to transfer them on new problems and to evaluate the working results concerning quality, costs and customer use.
- name the impact of specific boundary conditions, e.g. high quantities of mechatronic systems considering the customer, on the resulting design, to interpret the consequences and to evaluate the effects in unknown situations.
- name aspects of a successful product engineering in a team of worldwide acting companies regarding the field customer, company and market.
- evaluate their relevance for self-chosen examples and to transfer them on unknown problems.

**Content**

Operation system, system of objects and system of objectives of mechatronic appliances and power tool designs.

Mode of operation as enabler of design, components of mechatronic systems, application oriented design, guidelines for appliance and power tool design.

Part of the lecture is a project work, in which theory will be reprocessed and presented in a practical way. In such exercises the students also will present their results developed in project teams.

The interaction of analysis and synthesis will be acquired in student teams at the example of different appliances and power tools.

**Module grade calculation**

The module grade is composed of:

1. Grade of the oral exam (25%)
2. Grade of project work (75%)
Annotation
Participation in the course on device design requires simultaneous participation in the project work on device technology. For organisational reasons the number of participants is limited. A registration form will be provided on the IPEK homepage at the beginning of August. If the number of applicants is too large, a selection procedure will take place. This is based on the following selection criteria:

- Students within the course of studies will be decided on the basis of their progress (not only with semesters), which will be determined in a personal interview. The personal selection interviews take place in addition, in order to make the students aware of the special project-oriented format and the time required in correlation with the ECTS points of the course before the final registration for the course.
- With the same study progress after waiting period
- With same waiting time by lot.
- The same procedure is used for students from other courses.

**Mandatory**

| T-MACH-112115 | Artificial Intelligence in Production | 4 CR | Fleischer |
| T-MACH-112121 | Seminar Application of Artificial Intelligence in Production | 4 CR | Fleischer |

**Competence Certificate**

- T-MACH-112115 - Written Exam (90 min)
- T-MACH-112121 - Alternative test achievement (graded)

**Competence Goal**

The Students understand

- the relevance for the application of artificial intelligence in production and know the main drivers and challenges.
- the CRISP-DM process for implementing AI projects in production.
- the most important methods within the CRISP-DM phases and can theoretically select and practically apply them holistically based on practical issues.

**Content**

The module AI in Production is designed to teach students the practical, holistic integration of machine learning methods in production. The course is oriented towards the phases of the CRISP-DM process with the aim of developing a deep understanding of the necessary steps and content-related aspects (methods) within the individual phases. In addition to teaching the practical aspects of integrating the most important machine learning methods, the focus is primarily on the necessary steps for data generation and data preparation as well as the implementation and validation of the methods in an industrial environment. The focus of the module is on the practical teaching of the contents, based on production engineering issues. The necessary theoretical basics are taught in the course "Lecture AI in Production". In the course "Project internship Application of AI in Production", practice-relevant architectures of machine learning are used to solve current practical problems in the production environment. The implementation here is also oriented to the phases of the CRISP-DM.

**Workload**

</tr>
</tbody>
</table>

**Mandatory**

| T-MACH-108844 | Automated Manufacturing Systems | 8 CR | Fleischer |

**Competence Certificate**

oral exam (40 min)

**Competence Goal**

The students

- are able to analyze implemented automated manufacturing systems and describe their components.
- are capable to assess the implemented examples of implemented automated manufacturing systems and apply them to new problems.
- are able to name automation tasks in manufacturing plants and name the components which are necessary for the implementation of each automation task.
- are capable with respect to a given task to plan the configuration of an automated manufacturing system and to determine the necessary components to its realization.
- are able to design and select components for a given use case of the categories: "Handling Technology", "Industrial Robotics", "Sensory" and "Controls".
- are capable to compare different concepts for multi-machine systems and select a suitable concept for a given use case.

**Content**

The module gives an overview of the structure and functioning of automated production plants. In a basic chapter, fundamental elements for the realisation of automated production systems are taught. These include:

- Drive and control technology
- Handling technology for handling workpieces and tools
- Industrial robot technology
- Quality assurance in automated production plants
- Automated machines, cells, centres and systems for production and assembly
- Structures of multi-machine systems
- Project planning of automated production plants

An interdisciplinary view of these sub-areas results in interfaces to Industry 4.0 approaches. The basic chapters are supplemented by practical application examples and live demonstrations in the Karlsruhe Forschungsfabrik.

In the second part of the module, the fundamentals taught will be clarified using practically executed production processes for manufacturing and disassembling components, and the automated production facilities for manufacturing these components will be analyzed. In the field of automotive powertrain technology, the automated production process for both the manufacture and disassembly of batteries is considered. In the powertrain area, automated production facilities for the disassembly of electric motors are considered. Furthermore, automated production systems for the field of additive manufacturing are considered.

Within tutorials, the contents from the module are deepened and applied to concrete problems and tasks.

**Workload**

1. Presence time lecture/exercise: 15 * 6 h = 90 h
2. Pre- and post-processing time lecture/exercise: 15 * 9 h = 135 h
3. Exam preparation and presence in the same: 15 h
In total: 240 h = 8 LP

**Mandatory**

| T-MACH-100092 | Automotive Engineering I | 8 CR | Gauterin, Unrau |

**Competence Certificate**
written exam; duration approximately 2 hours

**Prerequisites**
Only one out of the two modules "M-MACH-100501 - Grundlagen der Fahrzeugtechnik I" and "M-MACH-102686 - Automotive Engineering I" is allowed.

**Competence Goal**
The students know the movements and the forces at the vehicle and are familiar with active and passive security. They have proper knowledge about operation of engines and alternative drives, the necessary transmission between engine and drive wheels and the power distribution, so that they can apply their knowledge effectively in actual practice. They have an overview of the components necessary for the drive and have the basic knowledge, to analyze, to judge and to develop the complex system "vehicle".

**Content**
The module provides an overview of:
1. History and future of the automobile
2. Driving mechanics: driving resistances and driving performances, mechanics of the longitudinal and transverse forces, passive safety
3. Engines: combustion engine, alternative drives (e.g. electric motor, fuel cell)
4. Transmission: clutches (e.g. friction clutch, visco clutch), transmission (e.g. mechanical transmission, hydraulic fluid transmission)
5. Power transmission and distribution: drive shafts, cardan joints, differentials

**Workload**
1. regular attendance lecture: 15 * 2 * 2 h = 60 h
2. pre and post processing lecture: 15 * 2 * 3 h = 90 h
3. examination preparation and presence in examination: 90 h
In total: 240 h = 8 LP

**Mandatory**

| T-MACH-102117 | Automotive Engineering II | 4 CR | Gauterin, Unrau |

**Competence Certificate**  
Written exam; duration approximately 1.5 h

**Prerequisites**  
none

**Competence Goal**  
The students have an overview of the modules, which are necessary for the road holding of a motor vehicle and the power transmission between vehicle bodywork and roadway. They have knowledge of different wheel suspensions, the tyres, the steering elements and the brakes. They know different execution forms, the function and the influence on the driving or brake behavior. They can apply their knowledge effectively in actual practise. They are able to develop the appropriate components correctly. They are ready to analyze, to judge and to optimize the complex relationship of the different components under consideration of boundary conditions.

**Content**  
The module provides an overview of:

1. Chassis: Wheel suspensions (rear axles, front axles, kinematics of axles), tyres, springs, damping devices
2. Steering elements: Manual steering, servo steering, steer by wire
3. Brakes: Disc brake, drum brake, comparison of the designs

**Workload**  
1. regular attendance lecture: 15 * 2 h = 30 h  
2. pre and postprocessing lecture: 15 * 3 h = 45 h  
3. examination preparation and presence in examination: 45 h  
In total: 120 h = 4 LP

T-MACH-105218 Automotive Vision 6 CR Lauer, Stiller

Competence Certificate

Type of Examination: written exam
Duration of Examination: 60 minutes

Prerequisites

none

Competence Goal

After having participated in the lecture, the participants have gained knowledge on modern techniques of signal processing and artificial intelligence which can be used to evaluate video sequences, to relate the image content to a spatial context and to interpret the content semantically. This comprises, binocular reconstruction, recognition of movements in video sequences, state space modeling and Bayesian filters, and the recognition of road surfaces and object behavior. The participants have learned to analyze the algorithms mathematically, to implement them in software, and to apply them to tasks in autonomous driving and mobile robots. The participants are able to analyze problems in the areas mentioned before and to develop appropriate solutions.

Content

Machine perception and interpretation of the environment forms the basis for the generation of intelligent behavior. Especially visual perception opens the door to novel automotive applications. Driver assistance systems already improve safety, comfort and efficiency in vehicles. Yet, several decades of research will be required to achieve an automated behavior with a performance equivalent to a human operator. The lecture addresses students in mechanical engineering and related subjects who intend to get an interdisciplinary knowledge in a state-of-the-art technical domain. Machine vision and advanced information processing techniques are presented to provide a broad overview on seeing vehicles. Application examples from cutting-edge and future driver assistance systems illustrate the discussed subjects. The lecture consists out of 2 hours/week of lecture and 1 hour/week of computer exercises. In the computer exercises, methods introduced in the lecture will be implemented in MATLAB and tested experimentally.

Workload

180 hours composed out of
hours of lecture: 15*3 h = 45 h
preparation time prior to and after lecture: 15*5 h = 75 h
exam preparation and exam: 60 h

**Competence Certificate**

The assessment consists of an oral or a written exam according to Section 4 (2), 1 or 2 of the examination regulation.

**Prerequisites**

none

**Competence Goal**

Students are able to:

- Describe processes and machines of technical logistics,
- Model the fundamental structures and the impacts of material handling machines with mathematical models,
- Refer to industrially used machines
- Model real machines applying knowledge from lessons and calculate their dimensions.

**Content**

- effect model of conveyor machines
- elements for the change of position and orientation
- conveyor processes
- identification systems
- drives
- mechanical behaviour of conveyors
- structure and function of conveyor machines
- elements of intralogistics
- sample applications and calculations in addition to the lectures inside practical lectures

**Workload**

presence: 48h
rework: 72h

| T-MACH-109920 | Basics of Technical Logistics II | 6 CR | Hochstein |

**Competence Certificate**

The assessment consists of an oral or a written exam according to Section 4 (2), 1 or 2 of the examination regulation.

**Prerequisites**

none

**Competence Goal**

The student is able to

- describe and design processes and process networks in intralogistics,
- model and analyse the material flow between processes,
- describe material flow elements and apply them in a systematic way,
- check material flow elements for their safety.

**Content**

The aim of this lecture is to give an overview of the three major topics of technical logistics:

- Processes in intralogistic systems
- Technology of technical logistics
- Organization and control of intralogistic processes

Using the example of an intralogistics system, the various topics are presented over the course of the lecture period, so that students are in the end able to understand and describe such an overall system in detail.

**Workload**

Attendance: 36 hours
Rework: 114 hours

**Recommendation**

Basics knowledge of technical logistics I is preconditioned

**Learning type**

Lectures
### 6.15 Module: Batteries and Fuel Cells [M-ETIT-100532]

**Responsible:** Prof. Dr.-Ing. Ulrike Krewer

T-ETIT-101956  Bioelectric Signals  3 CR  Loewe

**Competence Certificate**

The success control is carried out as part of a written test of 90 minutes.

**Prerequisites**

none

**Module grade calculation**

The module grade is the grade of the written exam. The submission of the workshop tasks is a prerequisite for taking the written exam. If there is a very good oral discussion of the workshop tasks, 5 points can be earned for each of the two workshop parts (from 100). The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for examinations that may be taken at a later date. The final assessment of the bonus performance is carried out by the examiner and is documented.

**Workload**

Attendance time lecture: 8 * 1.5h = 12h
Preparation / follow-up lecture: 8 * 1h = 8h
Workshop tasks: 20h + 15h = 35h
Exam preparation and attendance in the same: 35h
Total: 90h

**Recommendation**

Knowledge of the basics of signal processing and physiology is helpful.
Fundamentals of linear electrical networks, Fourier transformation as well as differential equations and systems of linear equations and numerical solution methods
6.19 Module: Biologically Inspired Robots [M-INFO-100814]

Responsible: Prof. Dr.-Ing. Rüdiger Dillmann

Organisation: KIT Department of Informatics

Competence Certificate
The assessment takes place in the form of a written examination lasting 60 min. The module grade is the grade of the written exam.
Bonus points can also be awarded. Information on this can be found under "Module grade calculation".

Prerequisites
none

Module grade calculation
The module grade is the grade of the written exam. Bonus points can also be awarded. The achievement of bonus points works as follows:

- Bonus tasks are solved voluntarily.
- In ILIAS the students wear groups of max. 3 participants for a bonus task.
- The solution to the bonus task must be set in ILIAS at the specified time.
- The solutions are read by the lecture assistants and corrected and approved if necessary.
- The groups present their solutions in the lecture (20 min).
- Lecturers award the bonus points individually for each student based on the written solution and the presentation.
- Each participant can acquire a maximum of 6 bonus points.
- Bonus points can only be earned once.

The bonus points are credited as follows:

- Success control is carried out in a written test (written exam) of 60 min (max. 60 points).
- The exam consists of 6 tasks with 5 points each and 5 tasks with 6 points = 11 tasks.
- For the passed bonus task, a maximum of 6 points can be credited to the exam result.
- The grade can thus be improved by a maximum one step.

The total number of points remains limited to 60 points. The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for any examination achievements taken at a later date.

Mandatory
T-ETIT-106973 Biomedical Measurement Techniques II 3 CR Nahm

Competence Certificate
Success is checked in the form of a written test of 60 minutes. The module grade is the grade of the written exam. Bonus points can also be awarded. You can find information on this under "Module grade".

Prerequisites
The successful participation in the module Biomedical Measurement Techniques I is a prerequisite.

Competence Goal
The students analyzed medical issues and identified measurement tasks. They have proposed a suitable combination of analog circuit technology and digital signal processing and used it to solve the measurement task. They have identified the sources of biosignals and explained the underlying physiological mechanisms. You have analyzed the signal properties and derived the resulting requirements for the measuring system. The students have broken down the measurement chain from the acquisition of the physical measurement variable to the presentation of the medically relevant information and compared alternative concepts.

Content
- physiology
- Sensor technology, physical / chemical measurement technology
- Analog amplification and filtering
- disturbance variables, measurement errors
- Analog-digital conversion, digital signal processing, user interface
- Patient safety, standards, norms
Module grade calculation
The module grade is the grade of the written exam.

Bonus points can also be awarded:
The achievement of bonus points works as follows:
- Bonus tasks are solved voluntarily.
- in ILIAS the students wear groups of max. 3 participants for a bonus task.
- The solution to the bonus task must be set in ILIAS at the specified time.
- The solutions are read by the lecture assistants and corrected and approved if necessary
- the groups present their solutions in the lecture (20 min)
- Lecturers award the bonus points individually for each student based on the written solution and the presentation.
- Each participant can acquire a maximum of 6 bonus points.
- Bonus points can only be earned once.
The bonus points are credited as follows:
- Success control is carried out in a written test (written exam) of 60 min (max. 60 points)
- The exam consists of 6 tasks with 5 points each and 5 tasks with 6 points = 11 tasks
- For the passed bonus task, a maximum of 6 points can be credited to the exam result.
The total number of points remains limited to 60 points.

Annotation
The event is based on an interactive combination of lecture parts and seminar parts. In the seminar part, the participants are asked to independently prepare and present individual topics of the course in small groups. These contributions are evaluated and the students receive bonus points for this. The bonus points are added to the points achieved in the written exam. The sum of the points gives the module grade.

Workload
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

Attendance time in lectures: 2 hours per 15 appointments = 30 hours
Preparation / post-processing of the substance: 4 h each 15 appointments = 60 h
Total effort approx. 90 hours = 3 LP

Recommendation
Basics in physiology. Basics in physical measurement technology, good previous knowledge of analog circuit technology and in digital signal processing.
6.22 Module: BioMEMS - Microfluidic Chipsystems V [M-MACH-105484]

**Responsible:** Prof. Dr. Andreas Guber

**Organisation:** KIT Department of Mechanical Engineering

Written exam (75 min)

**Prerequisites**

none

**Competence Goal**

The lecture will first address relevant microtechnical manufacturing methods. Then, selected biomedical applications will be presented, as the increasing use of microstructures and microsystems in Life-Sciences und in medicine leads to improved medico-technical products, instruments, and operation and analysis systems.

**Content**

Introduction into various microtechnical manufacturing methods: LIGA, Micro milling, Silicon Micromachining, Laser Microstructuring, μEDM, Metal-Etching  
Biomaterials, Sterilisation.  
Examples of use in the life science sector: basic micro fluidic structures: micro channels, micro filters, micromixers, micropumps, microvalves, Micro and nanotiter plates, Microanalysis systems (μTAS), Lab-on-chip applications.

Competence Certificate
The assessment consists of an oral exam (20 min) taking place in the recess period. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites
Required for the participation in the examination is the preparation of a report during the semester. The partial service with the code T-MACH-108889 must have been passed.

Competence Goal
The students will get an overview of the theoretic and practical functioning of different bus systems.
After the practical oriented lessons the students will be able to visualize the communication structure of different applications, design basic systems and evaluate the complexity of programming of the complete system.
Hereunto the students program in the practical orientated lessons IFM-controllers using the programming environment CoDeSys.

Content
- Knowledge of the basics of data communication in networks
- Overview of the operating mode of current field buses
- Explicit observation of the operating mode and application areas of CAN buses
- Practical programming of an example application (hardware is provided)

Workload
1. Regular attendance: 21 hours
2. Self-study: 9 hours
3. Programming: 50 hours
4. Exam and preparation: 40 hours

Recommendation
Basic knowledge of electrical engineering is recommended. Programming skills are also helpful.
The number of participants is limited. A registration in mandatory, the details will be announced on the webpages of the Institute of Vehicle System Technology / Institute of Mobile Machines. In case of too many applications, attendance will be granted based on pre-qualification.

**Prerequisites**

None

**Competence Goal**

The students are able to ...

- name the purposes and limits of numerical simulation and optimization of the virtual product development.
- solve simple realistic tasks in the field of finite element analysis and structure optimization with industrial common software.
- evaluate and to question the results of a simulation.
- identify and improve the mistakes of a simulation or optimization.

**Content**

- introduction to the finite element analysis (FEA)
- stress and modal analysis of finite element models using Abaqus/CAE as a preprocessor and Abaqus solver
- introduction to topology and shape optimization
- creation and calculation of various optimization models with the optimization package of Abaqus

**Workload**

regular attendance: 31.5 h
self-study: 88.5 h
independent work with different software tools (supported by tutors and assistants)
discussing and presenting results in small groups

Module: Channel Coding: Algebraic Methods for Communications and Storage [M-ETIT-105616]

Responsible: Prof. Dr.-Ing. Laurent Schmalen
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: Interdisciplinary Subject

Credits: 3
Grading scale: Grade to a tenth
Recurrence: Each summer term
Duration: 1 term
Language: English
Level: 4
Version: 1

Competition Certificate
The exam is held as an oral exam of approx. 20 min.

Competition Goal
The students are able to analyse and assess problems of algebraic channel coding. They can apply methods of algebraic coding theory in the context of communication systems for data transmission and data storage and are able to assess their implementation. Additionally, they will get knowledge to current research topics and research results.

Content
This course focuses on the formal and mathematical basics for the design of coding schemes in digital communication systems. These include schemes for data transmission, data storage and networking. The course starts by introducing the necessary fundamentals of algebra which are then used to derive codes for different applications. Besides codes that are important for data transmission applications, e.g., BCH and Reed-Solomon-Codes, we also investigate codes for the efficient storage and reconstruction of data in distributed systems (locally repairable codes) and codes that increase the throughput in computer networks (network codes). Real applications are always given to discuss practical aspects and implementations of these coding schemes. Many of these applications are illustrated by example code in software (python/MATLAB).

Module grade calculation
Grade of the module corresponds to the grade of the oral exam.

Workload
1. Attendance to the lecture: 15 * 2 h = 30 h
2. Preparation and review: 15 * 4 h = 60 h
3. Preparation for the exam: included in preparation and review
4. In total: 90 h = 3 LP

Recommendation
Knowledge of basic engineering as well as basic knowledge of communications engineering.
Previous attendance of the lectures "Communication Engineering I" and "Probability Theory" is recommended.
6.30 Module: Communication Systems and Protocols [M-ETIT-100539]

**Mandatory**

| T-ETIT-101938 | Communication Systems and Protocols | 5 CR | Becker, Becker |

**Competence Certificate**
The examination consists of a written examination of 120 min.

**Prerequisites**
none

**Competence Goal**
Participants know basic procedures and methods for developing and operating electronic communication systems. Participants know about current communication systems and know about their applications. Boundary conditions of such systems are known and their relevance for a given problem can be assessed. Given the boundary conditions and specifications, the students are able to design communication system by choosing suitable processes, methods, components and subsystems.

**Content**
The lecture will present the physical and technical basics for the design and construction of communication systems. Procedures and technical implementations for communication between electronic devices are presented. This includes, among other things, modulation methods, line model, arbitration, synchronization mechanisms, error correction mechanisms, multiplexing, communication systems, bus systems and on-chip communication. On the basis of selected practical examples, the application of the lecture contents in real systems is demonstrated.

**Module grade calculation**
The module grade is the grade of the written exam.

**Workload**
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:
1. attendance in 15 lectures an 7 exercises: 33 h
2. preparation / follow-up: 66 h (2 h per unit)
3. preparation of and attendance in examination: 24 h + 2 h
   A total of 125 h = 5 LP

**Recommendation**
Knowledge of the basics from the lecture „Digitaltechnik” (Lehrveranstaltung Nr. 23615) is helpful.
M 6.31 Module: Communications Engineering II [M-ETIT-105274]

**Responsible:** Dr.-Ing. Holger Jäkel  
Prof. Dr.-Ing. Laurent Schmalen

**Organisation:** KIT Department of Electrical Engineering and Information Technology

**Part of:** Interdisciplinary Subject

<td>1</td>
</tr>
</tbody>
</table>

**Mandatory**

| T-ETIT-110697 | Communications Engineering II | 4 CR | Jäkel, Schmalen |

**Competence Certificate**
The assessment will be carried out in the form of a written exam of 120 minutes.

**Prerequisites**
none

**Competence Goal**
The students are able to analyze even more complex problems in communications engineering. You can independently develop and validate solutions and use problem-solving software. The transfer of the learned methods enables the students to quickly grasp other topics and to work on them with the appropriate methodological knowledge.

**Content**
The course broadens the questions dealt with in the lecture Communication Engineering I. The focus here is on the detailed analysis of known algorithms and the introduction of new methods that were not discussed in the lecture Communications Engineering I, especially in the areas of system and channel modeling, equalization and synchronization.

**Module grade calculation**
The module grade is the grade of the written exam.

**Annotation**
The module can be started for the first time in summer term 2020. Please note: The German course "Nachrichtentechnik II" takes place every summer term (starting summer term 2020) and the English version "Communications Engineering II" takes place every winter term (starting winter term 2020/2021).

**Workload**
1. Attendance Lecture: 15 * 2 h = 30 h
2. Preparation / Postprocessing Lecture: 15 * 4 h = 60 h
3. Presence Exercise: 15 * 1 h = 15 h
4. Preparation / follow-up Exercise: 15 * 2 h = 30 h
5. Exam preparation and presence in the same: charged in preparation / follow-up
Total: 135 h = 4 LP

**Recommendation**
Knowledge of basic engineering mathematics including integral transformations and probability theory as well as basic knowledge of communications engineering. Previous visit to the lecture "Communications Engineering I", "Probability Theory" and "Signals and Systems" is recommended.
Module: Communications Engineering Laboratory [M-ETIT-100442]

Organisation: KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Industrial Automation (mandatory)
Field of Specialization / Field of Specialization: Robotics (Complementary Modules)
Interdisciplinary Subject

Additional Examinations

Credits 4  Grading scale Grade to a tenth  Recurrence Each winter term  Duration 1 term  Language German  Level 4  Version 1

Mandatory
T-MACH-105314 Computational Intelligence 4 CR Mikut, Reischl

Competence Certificate
A performance assessment is obligatory and can be oral, a written exam, or of another kind.

Prerequisites
None

Competence Goal
The students are able to apply the fundamental methods of computational intelligence (fuzzy logic, artificial neural networks, evolutionary algorithms) efficiently. They know the basic mathematical foundations and are able to transfer these methods to practical applications.

Content
- Terms and definitions Computational Intelligence, application fields and examples
- Fuzzy logic: fuzzy sets; fuzzification and membership functions; inference: T-norms and -conorms, operators, aggregation, activation, accumulation; defuzzification methods, structures for fuzzy control
- Artificial Neural Nets: biology of neurons, Multi-Layer-Perceptrons, Radial-Basis-Function nets, Kohonen maps, training strategies (Backpropagation, Levenberg-Marquardt)
- Evolutionary Algorithms: Basic algorithm, Genetic Algorithms and Evolution Strategies, Evolutionary Algorithm GLEAM, integration of local search strategies, memetic algorithms, application examples

Workload
The work load is about 120 hours, corresponding to 4 credit points.

Learning type
Lecture

**Competence Certificate**
written exam, 90 min. The tutorials T-MACH-110333 are prerequisites to the exam.

**Prerequisites**
none

**Competence Goal**
After having finished this module the students can list principles of continuum mechanics of solids and fluids. They can apply methods of tensor calculus and analysis in the framework of Continuum Mechanics for concrete examples and name numerical concepts for solving problems in modelling solids and/or fluids. Moreover, the students are able to solve problems in modelling solids and/or fluids using commercial software codes.

**Content**
This module aims to teach students the theoretical and practical aspects of continuum mechanics of solids and liquids. At the beginning there is an introduction to tensor calculus and kinematics. Then the balance equations of mechanics and thermodynamics are treated. The module gives an overview of the material theory of solids and fluids. This also includes the field equations for solids and fluids. Beyond thermomechanical couplings, the module imparts knowledge in dimensional analysis.

**Annotation**
none

**Workload**
1. Attendance lecture and tutorials: 15 * 2 h + 15 * 2 h = 60 h
2. Preparation and recap of lecture and tutorials: 15 * 3 h = 45 h

<td>German</td>
<td>4</td>
<td>1</td>
</tr>
</tbody>
</table>

### Mandatory

| T-ETIT-100666 | Control of Linear Multivariable Systems | 6 CR | Kluwe |

### Competence Certificate

Success is checked as part of a written overall test (120 minutes) of the course.

### Prerequisites

none

### Competence Goal

- The students first acquired basic knowledge of the various forms of description of linear multivariable systems in the frequency and time domain with both time-continuous and time-discrete models.
- In particular, they are able to transform multi-size systems in the state space to different normal forms depending on the requirements.
- The students have an understanding of fundamental properties such as Stability, trajectory profiles, controllability and observability as well as pole / zero configuration are achieved and the systems can analyze them accordingly.
- You master the basic principles for controlling linear multi-variable systems both in the frequency domain (series decoupling) and in the time domain (pole specification with pre-filter)
- In concrete terms, the students are familiar with the design procedures modal control, decoupling control in the time domain and the complete modal synthesis.
- You are familiar with the problem of state quantity determination by state observers and the design of complete and reduced observers.
- Students are able to use advanced concepts such as output feedback and dynamic controllers if necessary.
- You can continue to counter the problems of high model orders in the state space by reducing the order based on the dominance analysis.

### Content

The aim is to impart basic and advanced methods for the treatment of linear multi-size systems, the focus being on the state space. In this way, the students are introduced to a model that allows more modern and, in particular, non-linear processes. On the one hand, the module provides a comprehensive overview of the most important aspects in the variable description of the systems and the analysis of their characteristic properties. On the other hand, all facets of the synthesis of regulations for initial and permanent disorders and the observers often required for this are conveyed.

### Module grade calculation

The module grade is the grade of the written exam.

### Workload

Each credit point corresponds to 30 hours of work (of the student). Fall under the workload

- Attendance time in lecture / exercise (3 + 1 SWS: 60h = 2 CP)
- Preparation / follow-up lecture / exercise (90h = 3 CP)
- Preparation / attendance time written exam (30h = 1 CP)

### Recommendation

For a deeper understanding, basic knowledge of system dynamics and control technology is absolutely necessary, as taught in the ETIT Bachelor module "System Dynamics and Control Technology" M-ETIT-102181.

**Mandatory**

| T-MACH-105185 | Control Technology | 4 CR | Gönnheimer |

**Competence Certificate**

Written Exam (60 min)

**Prerequisites**

None

**Competence Goal**

The students ...  
- are able to name the electrical controls which occur in the industrial environment and explain their function.  
- can explain fundamental methods of signal processing. This involves in particular several coding methods, error protection methods and analog to digital conversion.  
- are able to choose and to dimension control components, including sensors and actors, for an industrial application, particularly in the field of plant engineering and machine tools. Thereby, they can consider both, technical and economical issues.  
- can describe the approach for projecting and writing software programs for a programmable logic control named Simatic S7 from Siemens. Thereby they can name several programming languages of the IEC 1131.

**Content**

The module control technology gives an integral overview of available control components within the field of industrial production systems.  
The first part of the module deals with the fundamentals of signal processing and with control peripherals in the form of sensors and actors which are used in production systems for the detection and manipulation of process states.  
The second part handles with the function of electric control systems in the production environment. The main focus in this chapter is laid on programmable logic controls, computerized numerical controls and robot controls. Finally the module ends with the topic of cross-linking and decentralization with the help of bus systems.  
The module is very practice-oriented and illustrated with numerous examples from different branches.

The following topics will be covered:

- Signal processing  
- Control peripherals  
- Programmable logic controls  
- Numerical controls  
- Controls for industrial robots  
- Distributed control systems  
- Field bus  
- Trends in the area of control technology

**Workload**

regular attendance: 21 hours  
self-study: 99 hours

### Competence Certificate

The examination takes place within the framework of an oral overall examination (20 minutes).

### Prerequisites

none

### Competence Goal

- The students are familiar with the aspects of Industrie 4.0 and the associated cyber-physical production systems.  
- Students will be able to network machines and industrial control systems with each other.  
- Students understand the need for advanced methods and services in the field of industrial automation.  
- Students are able to model mechatronic production systems and form digital assets.  
- Students are able to validate different information models and ontologies for their applicability.  
- Students will be able to model data, information and knowledge or extract them from existing systems.  
- Students are able to apply artificial intelligence methods in the domain of systems engineering.  
- Students are able to conceptualize the networking of machines.  
- The students know suitable modeling tools and their application.

### Content

- This module is designed to teach students the theoretical and practical aspects of Industrie 4.0.  
- This module further provides a definition of the asset administration shell as well as other information models in industrial application.  
  - AutomationML  
  - Petri nets  
  - PLCOpenXML  
- Aspects of Cyber Physical Production Systems will be covered as well as their networking in the Industrial Internet of Things.  
- Students will learn common IoT protocols such as OPC UA and MQTT.  
- The module aims to provide students with an understanding of the basic principles and limitations of artificial intelligence in industrial automation technology.  
- The module shows the relevance of the digital twin and the information modeling behind it.  
- The module teaches the aspects of the Semantic Web including ontologies and RDF.  
- The students learn formal description languages of automation technology.  
- The students learn the aspects of the reliability of networked automation systems regarding functional and IT security.  
- The module teaches advanced methods of software engineering and architectures for automation technology.

### Module grade calculation

The module grade is the grade of the oral exam.
Workload
The workload includes:

1. attendance in lectures and exercises: 15*2 h = 30 h
2. preparation / follow-up: 15*4 h = 60 h
3. Preparation of the CPS-Demos: 30 h
4. preparation of and attendance in the final presentation: included in preparation and follow-up.

A total of 120 h = 4 CR

Recommendation
Enjoyment and interest in industrial production and automation. Fun with digitalization and virtual engineering in particular. No inhibitions about software and data models.
6.41 Module: Decentrally Controlled Intralogistic Systems [M-MACH-102687]

**Responsible:** Prof. Dr.-Ing. Kai Furmans

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Field of Specialization / Field of Specialization: Industrial Automation (Internships)

<tbody>
<tr>
<td>4 CR</td>
<td>Decentrally Controlled Intralogistic Systems</td>
</tr>
</tbody>
</table>

**Competence Certificate**
The success control takes place as a study achievement in the form of the presentation of the work results (Lego robot and code) as well as a presentation of five to ten minutes and following discussion.

**Prerequisites**
None

**Competence Goal**
Students are able to:

- Name and explain the basics of intralogistic conveyor systems
- Describe and explain communication types between decentralized systems
- Apply the basics of project management in subsequent projects
- Developing constructive solutions for mechanical problems
- Implementing designed behavior patterns in a graphical programming language
- Applying the theory learned to a practical problem
- Evaluate solutions developed through group discussions and presentations

**Content**
This module is designed to teach students theoretical and practical aspects of automated, decentralized intralogistics. Theoretical basics of mechanical engineering and automation technology will be experienced in practice by implementing a model with Lego Mindstorms. In addition, the basics of control engineering are taught and joint development work in small groups as well as thinking with system boundaries are practised. The students plan self-contained parts of an intralogistic circuit that must interact with other systems in order to master a given transport task. This requires a well thought-out design as well as suitable programming and the coordination of common interfaces.

**Competence Goal**
Students should be able to grasp the underlying concepts in the field of deep learning and its various applications.

- Understand the theoretical basis of deep learning
- Understand the Convolutional Neural Networks (CNN)
- Develop basis for the concepts and algorithms used in building and training the CNNs.
- Able to apply deep learning in different computer vision applications.

**Content**
In recent years tremendous progress has been made in analysing and understanding image and video content. The dominant approach in Computer Vision today are deep learning approaches, in particular the usage of Convolutional Neural Networks.

The lecture introduces the basics, as well as advanced aspects of deep learning methods and their application for a number of computer vision tasks. The following topics will be addressed in the lecture:

- Introduction to Deep Learning
- Convolutional Neural Networks (CNN): Background
- CNNs: basic architectures and learning algorithms
- Object Recognition with CNN
- Image Segmentation with CNN
- Recurrent Neural Networks
- Generating image descriptions (Image Captioning)
- Automatic question answering (Visual Question Answering)
- Generative Adversarial Networks (GAN) and their applications
- Deep Learning platforms and tools

**Annotation**
The course is partially given in German and English.

**Mandatory**  
T-MACH-105330 Design with Plastics 4 CR Liedel

**Competence Certificate**  
Oral exam, about 20 minutes

**Prerequisites**  
none

**Competence Goal**  
Students will be able to  
• distinguish polymer compounds from other construction materials regarding chemical differences, thermal behaviour and solid conditions.  
• discuss main plastics processes regarding advantages and disadvantages of materials selection and part geometry design and to make appropriate selections.  
• analyze complex application requirements concerning material impacts on strength and to use the classic dimensioning method specific to the application to evaluate the lifetime part strength limit.  
• evaluate part tolerances and geometry by appropriate methods considering molding shrinkage, production tolerances, post shrinkage, heat expansion, swelling, elastic and creep deformation.  
• design plastic specific joining geometries like snap fits, screw bosses, weld seams and film hinges.  
• detect classic molding failures and understand potential causes as well as to reduce the probability of molding failures by defining an optimized design.  
• understand benefits and limits of selected simulation tools in the plastic technology discipline (strength, deformation, filling, warpage).  
• assess polymer classes and plastic part designs with respect to suitable recycling concepts and ecological consequences.

**Content**  
In module Design with Plastics, students learn the structure and properties of plastics, their processing process and their behaviour under environmental conditions. In addition, they deal with aspects of dimensioning in regard to strength and geometry, discuss design guidelines which are suitable for plastics and see several examples. Furthermore, basics regarding the joining of plastic components, structural foams, supporting simulation tools and trends in plastic technology are shown.

**Module grade calculation**  
The module grade is the grade of the oral exam.

**Workload**  
The workload for the lecture "Design with Plastics" is 120 h per semester and consists of the presence during the lectures (21 h), preparation and rework time at home (50 h) and preparation time for the oral exam (49 h).

**Recommendation**  
Polymerengineering I

**Learning type**  
Lectures (Obligatory)
6.48 Module: Digital Beam-Forming for Imaging Radar [M-ETIT-105415]

**Responsible:** Prof. Dr.-Ing. Thomas Zwick

**Organisation:** KIT Department of Electrical Engineering and Information Technology

**Part of:** Interdisciplinary Subject

---

**Mandatory**

**T-ETIT-110940** Digital Beam-Forming for Imaging Radar

**4 CR** Zwick

---

**Competence Certificate**

The examination consists of a written exam (approx. 120 min.) and weekly exercises. The overall impression is rated.

**Prerequisites**

The basic principles will be repeated in the lecture. The following lectures are helpful for a comprehensive understanding: Radar System Engineering (engl.), Antennen und Mehrantennensysteme, Spaceborne Radar Remote Sensing (engl.), Modern Radio System Engineering (engl.).

**Competence Goal**

Students have a basic knowledge of antenna arrays, radar, multipath propagation and noise. They understand the principle and functionality of beam shaping and the differences between digital, analog and hybrid beam-forming. They know the theory, methods, and algorithms of beam-forming. They can understand how beam-forming is applied to radar. You can explain basic radar system concepts and summarize the various applications.

**Content**

The lecture is (inherently) interdisciplinary and ideally suited to teach students how to combine news and radar technology using digital beam shaping. The basic knowledge required for antennas and antenna groups, wave propagation, radar ambiguities and noise are explained in the lecture. This is followed by a detailed presentation of the various radiation shaping algorithms, each with reference to communication and radar systems and with application examples from satellite-based radar systems. Aspects such as digital and hybrid beam shaping, as well as MIMO and equivalent virtual antenna configuration are explained. Accompanying the lecture, exercises on the lecture material are given. These are discussed in a room exercise and the associated solutions are presented in detail. The voluntary computer internship (not relevant to grades) is closely linked to the lecture and the accompanying tutorial. It is based on the theory developed in the lecture and supplements this with practical experience. The tasks calculated in the tutorial as well as the further explanations are reproduced in the computer internship using simulations.

**Module grade calculation**

The module grade results of the assessment of the written exam and the weekly exercises. Details will be given during the lecture.

**Workload**

- Attendance time in lectures (1.5 h per 15 dates) and exercises (1.5 h per 7 dates) = 33 h
- Preparation / revision: 15 weeks each 3 h = 45 h
- Exam preparation and presence in the exam: 1 week à 40 h = 40 h
- Total effort approx. 120 hours = 4 LP

**Recommendation**

Basics of signal processing and radar techniques are useful.

**Mandatory**

T-ETIT-104571  
Digital Hardware Design Laboratory  
6 CR  
Becker

**Competence Certificate**  
Control of success is carried out in an oral examination as well as during the laboratory exercises in form of laboratory reports and/or oral interrogations.

**Prerequisites**  
none

**Modeled Conditions**  
The following conditions have to be fulfilled:

1. The module M-ETIT-102264 - Digital Hardware Design Laboratory must not have been started.

**Competence Goal**  
The students

- know the practical usage of FPGAs  
- are able to efficiently use modern hardware development tools  
- know how to describe hardware in VHDL  
- can self dependently draft and implement VHDL-Components based on given specifications  
- are able to practically apply common concepts and principles in hardware development (e.g. pipelining)

**Content**  
Grouped in teams of two, the students are introduced to the design of complex hardware/software systems. The laboratory takes place in weekly 4 hour laboratory sessions. During the first few sessions, the students are introduced to the implementation of VHDL-components, the usage of modern synthesis and simulation tools as well as basic knowledge on FPGAs.

Based on those fundamentals, students develop the different components of an image processing system in the second part of the laboratory. This includes implementation and testing steps for the individual components as well as the integration to an overall system. Finally, the hardware system can be realized on FPGA-Hardware and tested with live camera images.

**Module grade calculation**  
The module grade is composed of the result of the oral examination and the effected performance during the laboratory sessions (e.g. reports, oral interrogations, etc.).

**Annotation**  
The module ETIT-102264 („Praktikum Entwurf digitaler Systeme”) must not have been started or completed.

**Workload**  
The amount of work is distributed as follows:

- time of presence during the laboratory sessions: 11 sessions with 4h = 44h  
- Preparation and wrap-up: 6h per laboratory session = 66h  
- Preparation for the examination: 40h

In total 150h (25h per credit point).

**Recommendation**  
Previous knowledge in design and design automation for electronic systems (e.g. from the lectures HSO, No. 2311619 or HMS, No. 2311608) is recommended.
6.52 Module: Digital Twin Engineering [M-ETIT-106040]

**Responsible:** Prof. Dr.-Ing. Mike Barth

**Organisation:** KIT Department of Electrical Engineering and Information Technology

**Part of:** Interdisciplinary Subject

<table>
<thead>
<tr>
<th>Credits</th>
<th>Grading scale</th>

</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Grade to a tenth</td>
<td>Each winter term</td>
<td>1 term</td>
<td>English</td>
<td>4</td>
<td>1</td>
</tr>
</tbody>
</table>

**Mandatory**

| T-ETIT-112224 | Digital Twin Engineering | 4 CR |

**Competence Certificate**
The examination takes place in form of other types of examination. It consists of a model library developed in the course of a semester-long project in the modeling language Modelica and a presentation of the library lasting 25 minutes. The quality of the model library is evaluated within the framework of the criteria: documentation, formal correctness, functionality, usability, HMI and modeling level of detail. The presentation is evaluated as an additional aspects. The overall impression is evaluated.

**Prerequisites**
none

**Competence Goal**
- The students will be able to analyze, structure and formally describe problems in the area of object-oriented physical system modeling.
- The students will be able to understand, apply and further develop the Modelica modeling language.
- The students are able to transfer bidirectionally acting systems into a model.
- The students are able to transfer physical equations into the modeling environment.
- The students are able to critically evaluate the different numerical integration methods for their applicability and to use them sensibly.
- The students are able to create system models and co-simulations using functional mockup units.
- The students will be able to implement a real system at the appropriate modeling depth for the task.
- The students will be able to abstract real system properties and, if necessary, decide whether they need to be modeled.
- The students know suitable simulation tools and their application.

**Content**
- This module is designed to provide students with the theoretical and practical aspects of object-theoretic equation-based modeling.
- This module also provides a definition of the digital twin and its aspects of the management shell.
  - In this context, a classification of simulation models in the I4.0 VWS takes place.
- Both system simulation in the Open Modelica Editor (OME) and co-simulation with Functional Mockup Units (FMU) will be covered.
- Students create a new model library of a mechatronic system in a semester-long project (teams of 3-4 students).
- The module provides an overview of modern system simulation methods based on bidirectional flow and potential modeling.
- Beyond theoretical and practical modeling, the module imparts the knowledge about practice-relevant modeling levels or depths.
- Furthermore, quality standards for simulation models with focus on the engineering of plants/systems are discussed.

**Module grade calculation**
The assessment of the developed model library and the presentation of the library will be included in the module grade. More details will be given at the beginning of the course.
Workload
The workload includes:

1. attendance in lectures an exercises: 10×1.5 h = 15 h
2. preparation / follow-up: 15×2 h = 30 h
3. Implementation of the model library: 60 h
4. preparation of and attendance in the final presentation: 15 h

A total of 120 h = 4 CR
Module: Digitalization of Products, Services & Production [M-MACH-105476]

**Responsibility:** Dr.-Ing. Bernd Pätzold

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Field of Specialization / Field of Specialization: Industrial Automation (Complementary Modules) Interdisciplinary Subject

**Mandatory**

| T-MACH-108491 | Digitalization of Products, Services & Production | 4 CR | Pätzold |

**Competence Certificate**

Alternative exam assessment.
Two presentations in team work and two written compositions.

**Prerequisites**

None

**Competence Goal**

Students are able to

- describe the fundamental challenges and objectives of the progressive digitalization of products, service and production. In context of these challenges, students can name and explain the essential terms.
- illustrate the key drivers and fundamental technologies behind the digitalization of products, services and processes.
- describe the challenges of the ongoing digitalization and the corresponding changes in business processes and distinguish between them in regards to time and place. Furthermore, students are able to assign the IT-Architecture and systems to the corresponding process steps.
- highlight the requirement for future information management in networks of product development and production institutions and can clarify how to validated and safeguard the corresponding IT processes.
- to analyze the challenges of digitalization and present potential solution approaches via self-created scenarios for future developments.

**Content**

- Digitalization of products, services and production in the context of Industry 4.0.
- Key drivers for ongoing digitalization and their impact on future product development and manufacturing.
- Methods and procedures to design the according transformation process.
- Intensive group discussions of use-case scenarios using practical examples from the industry.

**Competence Certificate**

The final assessment will be an oral examination (appr. 20 min) taking place during the recess period. The examination will be offered in every semester and can be repeated at any regular examination date.

**Prerequisites**

None

**Competence Goal**

At the end of the lecture, participants can explain the structure and function of all discussed drive trains of mobile machines. They can analyze complex gearbox schematics and synthesize simple transmission functions using rough calculations.

**Content**

In this course the different drive trains of mobile machinery will be discussed.

The focus of this course is:

- mechanical gears
- torque converter
- hydrostatic drives
- power split drives
- electrical drives
- hybrid drives
- axles
- terra mechanics

**Workload**

120 h

**Learning type**

</tr>
</tbody>
</table>

**Competence Certificate**
Written examination, 120 minutes

**Prerequisites**
None

**Competence Goal**
The students are able to describe the dynamical behaviour of electro-mechanical systems using uniform mathematical approach. They are able to analyse interactions between mechanical and electro-mechanical subsystems. They are familiar with the essential retroactive effects, are able to identify them and calculate their impact. The students become acquainted with the basic non-linear effects in the coupled electro-mechanical systems and are able to analyse them by means of appropriate simulation tools.

**Content**
The lecture conveys two kinds of describing electro-mechanical systems. The first one (described shortly) is based on state and flow variables, the second one (which is in focus of the course) is based on an energetic description and the Lagrange-Maxwell-Formalism. These methods are then applied in order to analyse the most important electro-mechanical systems. These include:

- Dynamics of electro-mechanical converter and vibration exciters taking into account the load in resonance operation
- Dynamics of electrical machines taking into account the rotordynamic effects (imbalance, loss of stability, passage through resonance)
- Dynamics of piezo-electrical converters in sensor and actor operation

**Learning type**
Lecture and Tutorial

</table>

**Mandatory**

| T-MACH-105226 | Dynamics of the Automotive Drive Train | 5 CR | Fidlin |

**Competence Certificate**

A performance assessment is an oral exam (approx. 30 minutes).

**Prerequisites**

none

**Competence Goal**

After having attended this lecture students will be able to understand typical vibration phenomena in a vehicle powertrain and to simulate the essential components of the vehicle powertrain including components of the engine steering. The method of the simulation-based concept choice and the necessary interaction between OEMs and the delivering industry is part of the taught knowledge. The students will also gain experience in the application of numerical simulation methods for solving practical problems of torsion vibrations in highly non-linear systems.

**Content**

Lectures: The concept of a simulation-based optimization of the vehicle powertrain and its components. Modelling of the components of the power system including internal-combustion engine, torsional vibration damper (two mass flywheel, centrifugal force pendulum, internal damper/torsion damped clutch disc), hydrodynamical transformer, gear, Kardan wave, differential, wheels, driving manoeuvre and its appraisal incl. start, neutral gear, approach, acceleration drive, load alteration, gear alteration, shearing force, stop, and different special manoeuvres like change of intentions or misuse.

Exercise: Elementary numerical, proceedings to simulate nonlinear dynamic systems. Modelling of the powertrain in a simulation environment SimulationX or MapleSim.

**Workload**

Each credit point is equivalent to 25-30 hours of workload (per student). This refers to an average student who shows an average performance. The workload is as follows:

time of attendance lectures: 30 h
time of attendance exercise: 30h
self-study including exam preparation: 90 h
total 150 h - 5 credit points

**Recommendation**

Basic knowledge of the powertrain technology and elementary vibration knowledge are advantageous. The lectures refer to the book

Especially chapter 6 and 7 are recommended.

**Prerequisites**

none

**Competence Goal**

Students are able to:

- Describe elements and systems of technical logistics,
- Model and calculate structures and functions of special conveying machines,
- Describe interdependence of material flow systems and technique quantitatively and qualitatively and
- Equip material flow systems with appropriate machines.

**Content**

material flow systems and their (conveying) technical components
mechanical behaviour of conveyors;
structure and function of conveyor machines; elements of intralogistics (belt conveyor, racks, automatic guided vehicles, fan-in, bifurcation, and etc.)
sample applications and calculations in addition to the lectures inside practical lectures

**Workload**

Lecture and exercise: 4 LP = 120 h

1. Attendance time lecture: 28 h
2. Preparation/follow-up lecture: 56 h
3. Attendance time exercise: 12 h
4. Preparation/follow-up exercise: 24 h

**Mandatory**

| T-WIWI-102830 | Energy Systems Analysis | 3 CR | Ardone, Fichtner |

**Competence Certificate**
The assessment consists of a written exam according to Section 4(2), 1 of the examination regulation.

**Prerequisites**
None.

**Competence Goal**
The student

- has the ability to understand and critically reflect the methods of energy system analysis, the possibilities of its application in the energy industry and the limits and weaknesses of this approach
- can use select methods of the energy system analysis by her-/himself

**Content**
1. Overview and classification of energy systems modelling approaches
2. Usage of scenario techniques for energy systems analysis
3. Unit commitment of power plants
4. Interdependencies in energy economics
5. Scenario-based decision making in the energy sector
6. Visualisation and GIS techniques for decision support in the energy sector

**Workload**
The total workload for this course is approximately 90 hours. For further information see German version.

**Competence Certificate**
A performance assessment in the bricks to be chosen is obligatory and can be an oral or a written exam. For details see eligible bricks.

**Prerequisites**
Application and exam is allowed only in one lecture of this module (M-MACH-103205 - Technische Mechanik), "T-MACH-105209 - Einführung in die Mehrkörperrynamik", "T-MACH-105274 - Technische Mechanik IV" or "T-MACH-110375 - Mathematische Methoden der Kontinuumsmechanik".

**Competence Goal**
Introduction to multi-body dynamics: After completing this module, graduates will be able to describe the kinematics of a rigid body using rotational matrices, angular velocities and corresponding derivatives in various reference systems. They can specify holonomic and non-holonomic constraints for closed kinematic chains. In addition, the graduates can derive Newton-Euler's and Lie Lagrangian equations and apply the principle of d'Alembert and the principle of virtual power. Finally, they can analyze the structure of the equations of motion.

Engineering Mechanics IV: The graduates can study the kinematics for movements of points and systems. Based on Newton-Euler's axioms they can derive the equations of motion. In addition to classical synthetic methods, graduates can efficiently apply analytical methods with energy expressions as a starting point.

Mathematical methods of continuum mechanics: After completing the module, graduates can perform the essential operations of tensor algebra and tensor analysis for both second and higher-level tensors, in oblique and curvilinear coordinate systems. They can then apply these operations in the description of infinitesimal and finite deformations of continuum mechanical systems. In addition, graduates can specify the transport theorem and balance equations for continuum mechanical systems and use material equations.

**Content**
Contents of "Introduction to Multi-Body Dynamics": The role of multibody systems in engineering, kinematics of a single rigid body, Kinematics of multibody systems, rotation matrix, angular velocity, derivatives in different reference systems, holonomic and non-holonomic constraints, Newton-Euler's equations, principle of d'Alembert, principle of virtual power, Lagrange's equations, Kane's equations, structure of the equations of motion

Contents of "Engineering Mechanics IV": Spatial kinematics of a rigid body, Euler angles, angular velocity using Euler angles, Euler's equations, inertia tensor, kinetic energy of a rigid body, free gyroscopes, forced gyroscopes, systems of rigid bodies, principle of d'Alembert, Lagrange's equations of the first and second kind, generalized coordinates, free and forced vibration of one degree of freedom systems, frequency response, vibration of multi degree of freedom systems, vibration absorption

Contents of "Mathematical Methods of Continuum Mechanics": Tensor algebra: vectors; Basis transformation; dyadic product; Tensors of second order and their properties, eigenvalue problems, Theorem of Cayley-Hamilton, invariants; Tensors of higher order, tensor analysis; tensor algebra and analysis in oblique coordinate systems, differentiation of tensor-valued functions. Application of tensor calculus in Continuum Mechanics: kinematics of infinitesimal and finite deformations, transport theorem, balance equations, stress tensor, constitutive equations, initial boundary value problems.
Workload
Introduction to Multi-Body Dynamics: presence lecture: 15 * 2 h = 30 h, preparation and recap: 15 * 2 h = 30 h, exam preparation and presence during exam: 90 h
Engineering Mechanics IV: presence lecture and tutorial: 15 * 2 h + 15 * 2 h = 60 h, preparation and recap lecture and tutorial: 15 * 2 h + 15 * 2 h = 60 h, exam preparation and presence during exam: 30 h
Mathematical methods of continuum mechanics: presence lecture and tutorial: 15 * 2 h + 8 * 2 h = 46 h, preparation and recap lecture and tutorial: 15 * 2 h + 8 * 2 h = 46 h, exam preparation and presence during exam: 58 h

2 CR Doppelbauer, Geimer

**Competence Certificate**  
written test  
Duration 60 minutes  
result: passed / not passed  
No tools or reference materials may be used during the exam.

**Prerequisites**  
none

**Competence Goal**

- The students know the characteristics of an industriell working environment.  
- They understand the effectiveness of typical structures in companies and the intention of the most relevant business processes.  
- They can judge the impact of regulatory framework on their daily work.

**Content**

1. **Organization of Companies**  
   organizational structure, organizational units, managerial structure, organization charts, project organization, relation between superior and staff, board of managing directors, management of the company, supervisory board, advisory board
2. **Project Management**  
   definition of project, project manager, project team, primary processes, supporting processes
3. **Personnel Development**  
   applications, trainee programs, management career, professional career, career paths in companies, individual career planning, tasks of HR, manpower requirements planning, training, training-on-the-job, tools for human resource management, annual personnel talk, objective agreement
4. **Scheduling**  
   Methods for detailed scheduling, network plans, critical path, Gantt-diagram, milestones
5. **Development Processes**  
   research, advance development, series development, product marketing, V-model, SPALTEN-model, technical specifications, requirement specifications, clarification, concept, draft, elaboration, validation, verification, documentation, FMEA
6. **Standards and Laws**  
   importance of standards, German and international standardization systems, committees, certification
7. **Commercial Law**  
   health protection, safety at work, environment protection, product liability, patents
8. **Calculation, Financial Statement**  
   contract award estimate, project costing, unit cost, target costs, cost center accounting, cost recording, hourly rates, asset accounting, profit and loss statement
9. **Governance**  
   principles of governance (accountability, responsibility, transparency, fairness), leadership (technical, commercial), reviews, boards, audits, codetermination, compliance

**Competence Certificate**

Oral exam

**Prerequisites**

none

**Competence Goal**

Students of the course can
- outline and discuss a self-selected microtechnical process chain for a submitted microtechnical product or tool
- explain process steps in detail
- recognize connections between individual process steps
- reflect relevant interdisciplinary knowledge from chemistry, engineering and physics
- describe typical tools (masks, mould inserts) and their production

**Content**

The lecture offers a specialization in manufacturing technology for structure generation in microtechnology, preferably with large height or high aspect ratio. For this purpose, the lithographic process chain (UV-, X-ray, electron beam, 2-photon lithography) is presented intensively in the first half of the lecture. Starting with typical substrates and resists, resist processing, exposure and development are treated. Micro electroplating is discussed to build metallic microstructures. In the second half of the lecture, production methods for typical tools such as masks and mold inserts are a main focus. Furthermore, newer concepts for micro- and nanostructuring based on self-organisation are presented.

Throughout the lecture the description of the process steps by simple and deeper reaching models at the interface between engineering, chemistry and physics is used for a deeper understanding. The role of recurring ideas, such as the role of mass transfer or kinetic control in the individual process steps, will be taught and simple rules for process control and plant design will be derived. Attention is drawn to similarities and differences with microelectronic manufacturing processes. Special attention is paid to the interactions between different manufacturing steps in the complex process chain with regard to cause-and-effect. The technically important guarantee of homogeneity in the surface and freedom from defects of the process result is discussed by means of some manufacturing steps.

Module: Field Propagation and Coherence [M-ETIT-100566]

Responsible: Prof. Dr. Wolfgang Freude
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: Interdisciplinary Subject

Credits: 4
Grading scale: Grade to a tenth
Recurrence: Each winter term
Duration: 1 term
Language: English
Level: 4
Version: 1

Mandatory
T-ETIT-100976 Field Propagation and Coherence 4 CR Freude

Competence Certificate
Type of Examination: oral exam
Duration of Examination: approx. 30 minutes
Modality of Exam: Oral examination, usually one examination day per month during the summer and winter terms. An extra questions-and-answers session will be held for preparation if students wish so.

Prerequisites
none

Competence Goal
Presenting in a unified approach the common background of various problems and questions arising in general optics and optical communications
The students

• know the common properties of counting of modes, density of states and the sampling theorem
• comprehend the relationship between propagation in multimode waveguides, mode coupling, MMI and speckles
• can analyze propagation in homogeneous media with respect to system theory, antennas, and the resolution limit of optical instruments
• understand that coherence as a general concept comprises coherence in time, in space and in polarization
• comprehend the implication of complete spatial incoherence, and what is the radiation efficiency of a source with a diameter smaller than a wavelength (the mathematical Hertzian dipole, for instance)
• can assess when can two incandescent bulbs form an interference pattern in time
• know under which conditions a heterodyne radio receiver, which is based on a non-stationary interference, actually works

Content
The following selection of topics will be presented:

• Light waves, modes and rays: Longitudinal and transverse modes, sampling theorem, counting and density of modes ("states")
• Propagation in homogeneous media: Resolution limit. Non-paricial and paricial optics. Gaussian beam. ABCD matrix

Module grade calculation
The module grade is the grade of the oral exam.

Workload
total 120 h, hereof 45 h contact hours (30 h lecture, 15 h problem class), and 75 h homework and self-studies

Recommendation
Minimal background required: Calculus, differential equations and Fourier transform theory. Electrodynamics and field calculations or a similar course on electrodynamics or optics is recommended.
Literature
Detailed lecture notes as well as the presentation slides can be downloaded from the IPQ lecture pages. Additional reading:
Hecht, E.: Optics, 2. Ed. Reading: Addison-Wesley 1974
Further textbooks in German (also in electronic form) can be named on request

**Competence Certificate**

Oral exam; duration approximately 30 minutes

**Prerequisites**

None

**Competence Goal**

The students have proper knowledge about the process of commercial vehicle development starting from the concept and the underlying original idea to the real design. They are able to plan, to steer, and to handle this process. They can apply their knowledge effectively in actual practice. They know that the customer requirements, the technical realisability, the functionality and the economy are important drivers.

They are able to develop parts and components. Furthermore they have knowledge about different cab concepts, the interior and the interior design process. Consequently they are ready to analyze and to judge concepts of commercial vehicles as well as to participate competently in the commercial vehicle development.

They know the advantages and disadvantages of different drives. Furthermore they are familiar with components, such as transfer box, propeller shaft, powered and non-powered frontaxle etc. Beside other mechanical components, such as chassis, axle suspension and braking system, also electric and electronic systems are known. Consequently the student are able to analyze and to judge the general concepts as well as to adjust them precisely with the area of application. They can apply their knowledge effectively in actual practice.

**Content**

The module provides an overview of:

1.1. Introduction, definitions, history

1.2. Development tools

1.3. Complete vehicle

1.4. Cab, bodyshell work

1.5. Cab, interior fitting

1.6. Alternative drive systems

1.7. Drive train

1.8. Drive system diesel engine

1.9. Intercooled diesel engines

2.1. Gear boxes of commercial vehicles

2.2. Intermediate elements of the drive train

2.3. Axle systems

2.4. Front axles and driving dynamics

2.5. Chassis and axle suspension

2.6. Braking System

2.7. Systems

2.8. Excursion
Workload
1. regular attendance lecture: \(8 \times 4 \text{ h} = 32 \text{ h}\)
2. pre and postprocessing lecture: \(8 \times 6 \text{ h} = 48 \text{ h}\)
3. examination preparation and presence in examination: 40 h
In total: 120 h = 4 LP (2 semester)

**Competence Certificate**
Written exam, graded, approx. 3 h

**Prerequisites**
none

**Competence Goal**
After completing the course, the students are able to analyze the functionality of technical combustion systems (e.g. piston engines, gas turbines, furnaces). With regard to environmental pollution, students can name the mechanisms of combustion and pollutant formation and assess concepts for reducing pollutants. They can explain the fundamental chemical and physical processes of combustion and name experimental methods for investigating flames. Furthermore, the students can also describe the differences between laminar and turbulent flames and explain the principles of ignition processes.

**Content**
The lecture gives an overview of the basic terms and phenomena of technical combustion. In a basic chapter, experimental methods for investigating flames are taught. Conservation equations for laminar flames are derived based on scientific phenomena. In addition, the laminar premixed flame and the laminar non-premixed flame are treated as examples. Knowledge of chemical reactions and their description with reaction mechanisms is conveyed. Furthermore, ignition processes are taught. The content of the lecture is deepened in exercises and applied to specific problems and tasks.

T-MACH-105220 Fundamentals of Energy Technology 8 CR Badea, Cheng

Competence Certificate
A performance assessment will consist of a written examination of 90 minutes.

Prerequisites
none

Competence Goal
The objective of the module is to train the students on state of the art knowledge about the challenging fields of energy industry and the permanent competition between the economical profitability and the long-term sustainability. The students obtain basic knowledge on thermodynamics relevant to the energy sector and comprehensive knowledge on the energy sector: demand, energy types, energy mix, installations for energy production (conventional, nuclear and renewable), transport and energy storage, environmental impact and future tendencies. Students are able to use methods of economic efficiency optimization for the energy sector in a creative way, practice oriented, also specifically trained during the corresponding tutorial. The students are qualified for further training in energy engineering related fields and for (also research-related) professional activity in the energy sector.

Content
The following relevant fields of the energy industry are covered:
- Energy demand and energy situation
- Energy types and energy mix
- Basics. Thermodynamics relevant to the energy sector
- Conventional fossil-fired power plants
- Combined Cycle Power Plants
- Cogeneration
- Nuclear energy
- Regenerative energies: hydropower, wind energy, solar energy, other energy systems
- Energy storage
- Transport of energy
- Power generation and environment. Future of the energy industry

Module grade calculation
The module grade is the grade of the written examination.

Workload
1. lectures: 15 * 3 h = 45 h
2. preparation for lectures: 15 * 2 h = 30 h
3. tutorials: 15 * 2 h = 30 h
4. preparation for tutorials: 15 * 1 h = 15 h
5. preparation for exam: 120 h
Total: 240 h = 8 LP

Competence Certificate
The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites
None

Competence Goal
The students know the basic connections between drivers, vehicles and environment. They can build up a vehicle simulation model, with which forces of inertia, aerodynamic forces and tyre forces as well as the appropriate moments are considered. They have proper knowledge in the area of tyre characteristics, since a special meaning comes to the tire behavior during driving dynamics simulation. Consequently they are ready to analyze the most important influencing factors on the driving behaviour and to contribute to the optimization of the handling characteristics.

Content
1. Problem definition: Control loop driver - vehicle - environment (e.g. coordinate systems, modes of motion of the car body and the wheels)

2. Simulation models: Creation from motion equations (method according to D'Alembert, method according to Lagrange, programme packages for automatically producing of simulation equations), model for handling characteristics (task, motion equations)

3. Tyre behavior: Basics, dry, wet and winter-smooth roadway

Workload
The total work load for this module is about 120 Hours (4 Credits). The partition of the work load is carried out according to the credit points of the courses of the module. The work load for courses with 4 credit points is about 120 hours.

**Competence Certificate**

Achievement is examined in the form of a written examination lasting 120 minutes.

**Prerequisites**

none

**Competence Goal**

After completing this module, students know the specific challenges of an embedded system. They will have basic and detailed knowledge of the hardware description language VHDL. They are able to model circuit parts and taking into account the characteristics of the time behavior of modeled components. They are able to create test benches for models in order to perform the functional and timing verification. Furthermore, students will have a basic understanding about the principles of simulators, both for digital as well as analog circuit elements. Similarly, they have knowledge about cross-domain models in VHDL-AMS, that include mixed digital, analog and/or mechanical parts. Students understand the basics of fault simulations for the testability of fabricated circuits and are able to derive test vectors. They know the methods of formal verification.

**Content**

Through the support of CAE tools, which spread out quickly in the recent years, the design process of embedded systems could be accelerated significantly. The basic design of embedded systems using CAE tools and hardware description languages is being learned in this lecture. Knowledge about methods for testing and checking the correctness of designs will be received as well as requirements for industrial design automation systems.

**Module grade calculation**

Grades result from the written respectively the oral examination.

**Annotation**

During semester written, otherwise oral examination.

From WS 19/20 the module will be managed by Prof. Jürgen Becker and Dr. Jens Becker.

From WS 19/20 the module is offered in WS.

**Workload**

Each credit point (LP, Credit Points) corresponds around 25-30h of work effort of the student. Hereby we assume an average student with average performance. The workload is covered by: 1. Participating in lectures, tutorials and practical labs. 2. Preparing and wrap up of the above named units 3.Exam preparation and presence.

**Recommendation**

**Competence Certificate**  
Written exam, graded, approx. 3 hours

**Prerequisites**  
none

**Competence Goal**  
The students will have knowledge of the basic processes, laws and calculation methods of heat and mass transfer based on dimension analysis. Further, they can use it to analyze and derive application systems of industrial importance in the fields of mechanical engineering, energy and process engineering.

**Content**  
The lecture gives an overview of stationary and unsteady heat conduction phenomena in homogeneous and composite bodies; such as plates, pipe shells and spherical shells. Molecular diffusion in gases and the analogy between diffusion and heat conduction are thought. The lecture provides an overview of convective, forced heat transfer in pipes / channels with a flow, as well as plates and profiles that are flown over. In addition, the module conveys knowledge of the mass / heat transfer analogy and the multiphase, convective heat transfer (condensation, evaporation), as well as the convective mass transfer is taught. This module is intended to convey to students the theoretical and practical aspects of the radiant heat transport of solids and gases. The content of the lecture is deepened in exercises and applied to specific problems and tasks.

| T-INFO-101361 | Human-Machine-Interaction in Anthropomatics: Basics | 3 CR | Beyerer, Geisler |
### Competence Goal

- Students will be able to independently understand, structure, analyze, and solve a complex humanoid robotics problem using existing programming skills, alone or in a small team.
- Students can convey complex technical content in a presentation.

### Content

In this practical course, a is worked on alone or in small teams with up to 3 students. Questions of humanoid robotics are dealt with, such as semantic scene interpretation, active perception, planning of grasping and manipulation tasks, action representation with motion primitives, and programming by demonstration.

The project work (alone or in groups) is performed largely independently but supported by scientific staff of the H2T. At the end of the practical course, the work has to be documented and presented in a scientific talk.

### Annotation

- Internship dates are always by arrangement with the supervising staff member.
- An extension work of the topic as a master thesis is possible in principle.
- The number of participants in this practical course is generally limited and varies with the number of available research projects at the institute.

### Workload

Practical course with 4 SWS, 6 LP.

- 6 LP corresponds to ca. 180 hours, thereof
c- ca. 10h Attendance time in project discussion meetings
c- ca. 10h Preparation and follow-up of the above
c- ca. 150h Self-study to work on the topic
c- ca. 10h Preparation and giving of a scientific presentation

### Recommendation

- Very good programming skills in at least one high-level programming language are strongly recommended.
- Attendance of the lectures Robotics 1, Robotics 2, Robotics 3, as well as the robotics practical course are recommended.
- Project-specific recommendations (knowledge of C++, Python, …) will be announced in the individual project descriptions
### Competence Goal
The students choose a topic from the field of humanoid robotics, e.g. robot design, motion generation, perception or learning. They conduct a literature research on this topic under the guidance of a scientific supervisor. At the end of the semester, they present the results and write a term paper in English in the form of a scientific publication.

### Content
The student gained experience with literature research on a current research topic. He/she explored, understood and compared different approaches to a selected scientific problem. The student is able to write a summary of their literature research in the form of a scientific publication in English and to give a scientific talk on it.

### Workload
Seminar with 2 SWS, 3 LP
3 LP corresponds to 90 hours, including
45 hours literature research
25 hours manuscript preparation
10 hours preparation of the presentation
10 hours attendance time

### Recommendation

**Prerequisites**
none

**Competence Goal**
Students are able to:

- Describe requirements of logistical processes regarding IT systems,
- Choose information systems to support logistical processes and use them according to the requirements of a supply chain.

**Content**
1) Overview of logistics systems and processes
2) Basic concepts of information systems and information technology
3) Introduction to IS in logistics: Overview and applications
4) Detailed discussion of selected SAP modules for logistics support

**Workload**
regular attendance: 21 hours
self-study: 69 hours

</tr>
</tbody>
</table>

**Competence Certificate**

Alternative test achievement (graded):
- Result of the project work and final presentation with weighting 65%
- Oral exam (ca. 15 min) with weighting 35%

**Competence Goal**

The students ...

- can develop ideas for technical solutions in the environment of production plants in a team and evaluate their feasibility according to technical and economic criteria,
- are capable of selecting the essential components and modules of a production plant and carrying out the necessary calculations,
- can use FEM simulations to predict and evaluate the static and dynamic behavior of an assembly,
- are able to present, plan and assess their own work and decision-making processes,
- are able to apply basic methods of project management in an international environment.

**Content**

The module “International Production Engineering” offers a practical insight into the development of production plants in an international environment. A student team works on a current and concrete problem in the field of production engineering, which is introduced into the project by an industrial partner who is operating as well in Germany as in China.

As part of the course “International Production Engineering A”, the problem will initially be transferred into work packages. According to the elaborated project plan, ideas and concepts for a solution of the problem will be generated and developed. Based on the concepts, the selected solution approach is elaborated and validated, e.g. through simulation, programming and/or design, but always in the context of production technology. The practical implementation of the developed solution is part of the course “International Production Engineering B” during an eight-week research stay in China.

The project will be carried out by the students under the guidance of scientific staff and in cooperation with the industrial partner. The results of the project will be presented and discussed with the project partner in a final presentation (respectively IPE A and B).

More details about the course are discussed in an information event (always in January/February, the exact date is published on the homepage: [www.wbk.kit.edu](http://www.wbk.kit.edu)).

The project offers students ...

- the unique opportunity to put the contents of the accompanying lecture into practice in an interdisciplinary and creative context,
- to gain insights into a wide range of development activities relevant for their future careers,
- cooperation with an attractive industrial partner,
- work in a team with other students with competent support from scientific staff,
- first practical experience in project management
- international practical experience.
Workload

**IPE A**
1. Presence time lecture: 15 * 2 h = 30 h
2. Pre- and post-processing time lecture: 15 * 5 h = 75 h
3. Exam preparation and presence in the same: 15 h
In total: 120 h = 4 LP

**IPE B**
1. Presence time lecture: 15 * 2 h = 30 h
2. Pre- and post-processing time lecture: 15 * 5 h = 75 h
3. Exam preparation and presence in the same: 15 h
In total: 120 h = 4 LP
Module: Introduction into Energy Economics [M-WIWI-100498]

Responsible: Prof. Dr. Wolf Fichtner
Organisation: KIT Department of Economics and Management
Part of: Field of Specialization / Field of Specialization: Power Engineering (Complementary Modules)
Interdisciplinary Subject

Credits: 5  Grading scale: Grade to a tenth  Recurrence: Each summer term  Duration: 1 term  Language: German  Level: 4  Version: 4

Mandatory
T-WIWI-102746 Introduction to Energy Economics  5 CR Fichtner

Competence Certificate
The assessment consists of a written exam according to Section 4(2), 1 of the examination regulation.

Prerequisites
None

Competence Goal
The student is able to

- characterize and judge the different energy carriers and their peculiarities,
- understand contexts related to energy economics.

Content
1. Introduction: terms, units, conversions
2. The energy carrier gas (reserves, resources, technologies)
3. The energy carrier oil (reserves, resources, technologies)
4. The energy carrier hard coal (reserves, resources, technologies)
5. The energy carrier lignite (reserves, resources, technologies)
6. The energy carrier uranium (reserves, resources, technologies)
7. The final carrier source electricity
8. The final carrier source heat
9. Other final energy carriers (cooling energy, hydrogen, compressed air)

Workload
The total workload for this course is approximately 165.0 hours. For further information see German version.
Module: Introduction to Microsystem Technology I [M-MACH-102691]

**Responsible:** Prof. Dr. Jan Gerrit Korvink

**Organisation:** KIT Department of Mechanical Engineering

**Part of:**
- Field of Specialization / Field of Specialization: Microsystems Technology (mandatory)
- Interdisciplinary Subject
- Additional Examinations

<tbody>
<tr>
<td>4</td>
<td>Introductin to Microsystem Technology I</td>
<td>4 CR</td>
</tr>
</tbody>
</table>

**Competence Certificate**

Written exam: 60 min

**Prerequisites**
None

**Competence Goal**

The lecture gives an introduction into the basics of microsystems technology. In analogy to processes employed in fabrication of microelectronics circuits the core technologies as well as materials for producing microstructures and components are presented. Finally, various techniques for Silicon micromachining are explained and illustrated with examples for micro-components and micro-systems.

**Content**

- Introduction in Nano- and Microtechnologies
- Silicon and processes for fabricating microelectronics circuits
- Basic physics background and crystal structure
- Materials for micromachining
- Processing technologies for microfabrication
- Silicon micromachining
- Examples

**Workload**

- Time of attendance: 15 * 1,5 h = 22,5 h
- Preparation and follow up: 15 * 5,5 h = 82,5 h
- Exam Preparation and Exam: 15 h
- Total: 120 h = 4 LP

**Literature**

Competence Certificate
Written exam: 60 min

Prerequisites
none

Competence Goal
The lecture gives an introduction into the basics of microsystems technology. In the first part, methods for lithographic pattern transfer are summarized. Then specific techniques such as the LIGA process, micro-machining, and laser-patterning are explained and examples are given. Finally assembly and packaging methods are presented leading into a discussion of entire microsystems.

Content
- Introduction in Nano- and Microtechnologies
- Lithography
- LIGA-technique
- Mechanical microfabrication
- Patterning with lasers
- Assembly and packaging
- Microsystems

Workload
Time of attendance: \( 15 \times 1.5 \text{ h} = 22.5 \text{ h} \)
Preparation and follow up: \( 15 \times 5.5 \text{ h} = 82.5 \text{ h} \)
Exam Preparation and Exam: 15 h
Total: 120 h = 4 LP

<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>T-MACH-105187</td>
<td>IT-Fundamentals of Logistics</td>
<td>4 CR</td>
</tr>
</tbody>
</table>

**Competence Certificate**

The assessment consists of an oral exam (30 min.) or a written exam (60 min.) taking place in the recess period according to § 4 paragraph 2 Nr. 1/2 of the examination regulation.

**Prerequisites**

none

**Competence Goal**

The students...

- can describe the business process models from goods-inbound to goods-outbound based on sound basic knowledge, and derive the corresponding analysis models.
- will learn through the modularisation of the business process elements to think in reusable, adaptive IT components.
- will accomplish excellent work as a highly-motivated employee together in interdisciplinary teams (responses from the industry).
Content
The rapid development of information technology influences business processes drastically.
A strategic IT-orientation for an enterprise without a critical appreciation of worldwide IT-development (where the half-life value of IT for logistic systems knowledge is less than 3 years) is dangerous. The pressure of costs is always in focus. For this purpose the contents of this course, as well as the detailed script will be continuously revised, and the influences on business processes will be shown in practical examples.

Focuses:

**System architecture in Material Flow Control Systems (MFCS)**
A guiding principle for a new system architecture for MFC systems is the consideration of making new standardized, functional groups available for re-usability.

**Design and application of innovative Material Flow Control Systems (MFCS)**
The most important task of the MFCS is the commissioning of conveying systems with driving commands in a way that optimally utilizes the facility and serves the logistics processes on schedule.

**Identification of goods – Application in Logistics**
Along with business processes, coded information is the link between the flow of information and the flow of materials, and contributes to error prevention in the communication between people and machines.

**Data communication in Intra-logistics**
Information describes the content of a message that is of value to the recipient. The recipient can be both a human and a machine.

**Business processes for Intra-logistics – Software follows function!**
If the business processes from Goods incoming to Goods Outgoing are adapted with reusable building blocks then capabilities become visible. Against this background the consideration becomes apparent, how, through an innovative software architecture, a reusable building-block based framework can be made. Therefore applies: Software follows function. And only if all project requirements are documented in the planning phase, and supported together in an inter-disciplinary team - consisting of logistics planners, the customers (users) and the implementation leader (IL).

**Software development in accordance with industrial standards**
Today's development of object-oriented software, and the increasing penetration of industrial software production with this technology, makes it possible to create system designs that already offer these opportunities in their facility - both for a high degree of reuse and for easier adaptability.
In software development, object-oriented methods are used to improve the productivity, maintainability and software quality. An important aspect of object-orientation is: the objects used are primarily intended to depict the real world.

**Workload**
- regular attendance: 21 hours
- self-study: 69 hours

### Election notes

For self assignment of taken interdisciplinary qualifications of HoC, ZAK or SPZ the courses (‘Teilleistungen’) with the title 'Self Assignment-HOC-SPZ-ZAK …' have to be selected according to the grading scale, graded or ungraded. Title and credits of the achievement are adopted.

Students can access the module via the menu item "Exam Registration and Unregistration" at the Study Portal.

### Elective Key Competences (Elective: at least 1 item as well as at least 4 credits)

**Mandatory**

| T-MACH-105341 | Lab Computer-Aided Methods for Measurement and Control | 4 CR | Stiller |

**Competence Certificate**
Successful passed Colloquia

**Prerequisites**
none

**Competence Goal**
Powerful and cheap computation resources have led to major changes in the domain of measurement and control. Engineers in various fields are nowadays confronted with the application of computer-aided methods. This lab tries to give an insight into the modern domain of measurement and control by means of practically oriented and flexible experiments. Based on experiments on measurement instrumentation and digital signal processing, elementary knowledge in the domain of visual inspection and image processing will be taught. Thereby, commonly used software like MATLAB/Simulink will be used in both simulation and realization of control loops. The lab closes with selected applications, like control of a robot or supersonic computer tomography.

**Content**

1. Digital technology  
2. Digital storage oscilloscope and digital spectrum analyzer  
3. Supersonic computer tomography  
4. Lighting and image acquisition  
5. Digital image processing  
6. Image interpretation  
7. Control synthesis and simulation  
8. Robot: Sensors  
9. Robot: Actuating elements and path planning  
The lab comprises 9 experiments.

**Workload**
120 hours

**Recommendation**
Basic studies and preliminary examination; basic lectures in automatic control

**Learning type**
Tutorial

**Literature**
Instructions to the experiments are available on the institute's website.

**Mandatory**

| T-ETIT-100757 | Lab Course on Nanoelectronics | 6 CR Kempf |

**Competence Certificate**
The control of success takes place in form of the evaluation of a written report (approx. 10-20 pages) which introduces the topic, discusses the execution of the lab course and the scientific results puts the results into the overall context.

**Prerequisites**
none

**Competence Goal**
After successful completion of the module, students will be familiar with elementary processes of microsystems and thin-film technology and will be able to optimize the fabrication of thin-film structures independently and without external guidance. In addition, they will be able analyze and critically evaluate their results using adequate measuring tools. By working on the practical course in small groups, students also acquire or improve their teamwork skills.

**Content**
The students learn the basic procedures and processes for the fabrication of integrated circuits as they are also used in industry. After an introduction, they work on specified tasks in the clean room and technology laboratory of the Institute for Micro- and Nanoelectronic Systems and work independently on a set of tasks agreed upon in advance with the supervisor. In detail, the students learn the following methods or processes:

- Fabrication of thin films and multilayer systems by sputtering and thermal vapor deposition.
- Fotolithography
- Characterization of the manufactured devices at room temperature and low temperatures.
- Independent analyses, measurements and evaluations of characteristic quantities of the fabricated structures such as critical temperature, residual resistance ratio, current-voltage characteristics, etc.

The results are subsequently summarized by the students in a final report, put into context and critically discussed.

**Module grade calculation**
The module grade is the grade of the written report.

**Annotation**
Two weeks block course in lecture-free time

**Workload**
A workload of approx. 180h is required for the successful completion of the module. This is composed as follows:

- Preparation of the lab course: 20h
- Discussion and lab course planning with supervisor: 10h
- Attendance time in the lab course: 70h
- Preparation of the written report: 80h

**Recommendation**
Successful completion of the module M-ETIT-103451 - Thin Films: technology, physics and application I or M-ETIT-105608 - Physics, Technology and Applications of Thin Films is recommended.
Module: Laboratory Biomedical Engineering [M-ETIT-100389]

**6.101 Module: Laboratory Biomedical Engineering [M-ETIT-100389]**

**Responsible:** Prof. Dr. Werner Nahm

**Organisation:** KIT Department of Electrical Engineering and Information Technology

</tr>
</tbody>
</table>

**Competence Certificate**

The success control is carried out in the form of a written test of 120 minutes. If there are fewer than 20 candidates, an oral exam of around 20 minutes can alternatively take place. The module grade is the grade of the written or oral exam.

**Prerequisites**

none

**Competence Goal**

- Students have in-depth knowledge of different methods for measuring objects, especially surfaces.
- Students master different procedures for the metrological recording of objects and know the relevant requirements, procedures and results.
- Students are able to implement procedures for evaluating sensor data from (surface) measuring devices and to evaluate the quality of the measurement result.

**Content**

A large number of different measuring methods and systems can be used for the quality inspection of technically manufactured objects and their surfaces. Examples are white light interferometry, confocal microscopy and systems based on focus variation. The measurement methods and systems naturally differ in terms of the physical measurement principle used, but also in terms of the evaluation of the raw sensor data recorded.

In this internship, different systems for the metrological recording of (technical) surfaces are presented and their properties are characterized. In the test dates, the students themselves create procedures and algorithms for processing the sensor data in order to obtain information about the desired geometric and / or optical properties of the examined surface. The algorithms obtained are evaluated on the basis of sensor data from exemplary objects and characterized in terms of the quality of the measurement statements achieved.

**Module grade calculation**

The module grade is the grade of the written or oral exam.

**Annotation**

The submission of the protocols of all experiments is required for admission to the examination. The quality of the protocols is assessed; for the admission to the exam, the quality must be acceptable. Attendance of all laboratory dates including the introductory event is required. Already in the event of a single unexcused absence, admission to the examination will not be granted.

**Workload**

Total: approx. 160 hours, of which

1. Attendance time in introductory session: 1.5 hours
2. Preparation of the test dates: 32 h
3. Attendance time in test appointments (8 appointments of 4 hours each): 32 hours
4. Follow-up of the test dates, Creation of the minutes: 32 h
5. Exam preparation and attendance in the same: 60 h
Recommendation
Knowledge from the lectures "Metrology" or "Metrology in Mechatronics" and "Manufacturing Metrology" as well as basic knowledge of programming (e.g. in Matlab, C / C++) are helpful.
Module: Laboratory Mechatronics [M-MACH-102699]

**Responsible:** Prof. Dr. Veit Hagenmeyer
Prof. Dr.-Ing. Wolfgang Seemann
Prof. Dr.-Ing. Christoph Stiller

**Organisation:** KIT Department of Mechanical Engineering

**Part of:**
- Field of Specialization / Field of Specialization: Industrial Automation (Internships)
- Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Internships)

</tbody>
</table>

**Competence Certificate**
The laboratory course is offered exclusively as ungraded course work. The assessment consists of a group colloquium at the beginning of the individual specialization phases (Part 1). In addition, a robot control system for a pick-and-place task must be successfully implemented in the group phase (Part 2).

**Prerequisites**
None

**Competence Goal**
The students are able to put the knowledge from the specialization in mechatronics and microsystems technology into practice on an exemplary mechatronic system, a handling system. The students can create an automated object recognition, calculate kinematic systems and realize a communication between different systems (PC, CAN, USB).
Furthermore, the students can integrate the individual parts of a manipulator in teamwork to a functioning overall system.

**Content**

**Part I**
- Control, programming and simulation of robots
- CAN-Bus communication
- Image processing / machine vision
- Dynamic simulation of robots in ADAMS

**Part II**
In a group work, a kinematic system has to be programmed so that it is able to recognize and grip objects fully automatically.

**Module grade calculation**
The module is not graded. Passing the module is 100% tied to the performance assessment of the partial performance.

**Workload**
1. Attendance time Lecture: 15 * 2 h = 30h
2. self-study: 15 * 6 h = 90h
Total: 120h = 4 LP

**Learning type**
Seminar

**Competence Certificate**

Written examination (90 min)

**Prerequisites**

none

**Competence Goal**

The students are able to ...

- evaluate the potential of central lightweight strategies and their application in design processes.
- apply different stiffening methods qualitatively and to evaluate their effectiveness.
- evaluate the potential of computer-aided engineering as well as the related limits and influences on manufacturing.
- reflect the basics of lightweight construction from a system view in the context of the product engineering process.

**Content**

General aspects of lightweight design, lightweight strategies, construction methods, design principles, lightweight construction, stiffening techniques, lightweight materials, virtual product engineering, bionics, joining techniques, validation, recycling

Additionally, guest speakers from industry will present lightweight design from an practical point of view.

**Workload**

1. Time of presence lecture: 15 * 2 h = 30 h
2. Prepare/follow-up lecture: 15 * 2 h = 30 h
3. Exam preparation and time of presence: 60 h

**Mandatory**

| T-MACH-110771 | Logistics and Supply Chain Management | 9 CR | Furmans |

**Competence Certificate**
The assessment consists of a 120 minutes written examination (according to §4(2), 1 of the examination regulation).

**Prerequisites**
None

**Competence Goal**
The student
- has comprehensive and well-founded knowledge of the central challenges in logistics and supply chain management, an overview of various practical issues and the decision-making requirements and models in supply chains,
- can model supply chains and logistics systems using simple models with sufficient accuracy,
- identifies cause-effect relationships in supply chains,
- is able to evaluate supply chains and logistics systems based on the methods they have mastered.

**Content**
Logistics and Supply Chain Management provides comprehensive and well-founded fundamentals for the crucial issues in logistics and supply chain management. Within the scope of the lectures, the interaction of different design elements of supply chains is emphasized. For this purpose, qualitative and quantitative description models are used. Methods for mapping and evaluating logistics systems and supply chains are also covered. The lecture contents are enriched by exercises and case studies and partially the comprehension of the contents is provided by case studies. The interacting of the elements will be shown, among other things, in the supply chain of the automotive industry.

**Module grade calculation**
grade of the module is grades of the exam

**Workload**
contact hours (1 HpW = 1 h x 15 weeks):
- lecture: 60 h

independent study:
- preparation and follow-up lectures: 90 h
- preparation of case studies: 60 h
- examination preparation: 60 h

total: 270 h

**Recommendation**
none

**Learning type**
Lectures, tutorials, case studies.

**Competence Certificate**  
Written examination

**Prerequisites**  
none

**Competence Goal**  
Students are able to apply engineering-oriented calculation methods in order to model and to understand dynamic effects in rotating machinery. This includes the investigation of runup, stationary operation of rigid rotors including balancing, transient and stationary behavior of flexible rotors, critical speeds, dynamics of slider-crank mechanisms, torsional oscillations.

**Content**  
1. Introduction  
2. Machine as mechatronic system  
3. Rigid rotors: equations of motion, transient and stationary motion, balancing  
4. Flexible rotors: Laval rotor (equations of motion, transient and stationary behavior, critical speed, secondary effects), refined models  
5. Slider-crank mechanisms: kinematics, equations of motion, mass and power balancing

**Workload**  
Lectures and exercises: 32 h  
Studies: 118 h

**Learning type**  
Lecture, tutorial

**Responsible:** Prof. Dr. Gerhard Neumann

**Organisation:** KIT Department of Informatics

| T-INFO-111558 | Machine Learning - Foundations and Algorithms | 5 CR | Neumann |

**Competence Certificate**
See partial achievements (Teilleistung)

**Prerequisites**
See partial achievements (Teilleistung)

**Competence Goal**
- Students acquire knowledge of the basic methods of Machine Learning
- Students acquire the mathematical knowledge to understand the theoretical foundations of Machine Learning
- Students can categorize, formally describe and evaluate methods of Machine Learning
- Students can apply their knowledge to select appropriate models and methods for selected problems in the field of Machine Learning.

**Content**
The field of Machine Learning has made enormous progress in recent years and good knowledge of Machine Learning is becoming increasingly in demand on the job market. Machine Learning describes the acquisition of knowledge by an artificial system based on experience or data. Rules or certain calculations no longer have to be manually coded but can be extracted from data by intelligent systems.

This lecture provides an overview of essential and current methods of Machine Learning. After reviewing the necessary mathematical background, the lecture primarily deals with algorithms for classification, regression, and density estimation, with a focus on the mathematical understanding of probabilistic methods and neural networks.

Examples of topics include:
- Linear Regression and Classification
- Model Selection, Overfitting, and Regularization
- Bayesian Learning and Gaussian Processes
- Neural Networks, Backpropagation and Optimization
- Graphical Models and Sampling
- Expectation Maximization
- Variational Inference
- Variational Auto-Encoders and Diffusion Models
- Bayesian Neural Networks
- Transfer and Meta Learning
- Hyperparameter Tuning and Auto-ML

**Workload**
150h

**Recommendation**
See partial achievements (Teilleistung)

Competence Certificate

The assessment of this course is a written examination (60 min) according to §4(2), 1 of the examination regulation or an oral exam (20 min) following §4, Abs. 2, 2 of the examination regulation.

The exam takes place every semester and can be repeated at every regular examination date.

Prerequisites

None

Competence Goal

- Students gain knowledge of the basic methods in the field of machine learning.
- Students understand advanced concepts of machine learning and their application.
- Students can classify, formally describe and evaluate methods of machine learning.
- Students can use their knowledge to select suitable models and methods for selected problems in the field of machine learning.

Content

The subject area of machine intelligence and, in particular, machine learning, taking into account real challenges of complex application domains, is a rapidly expanding field of knowledge and the subject of numerous research and development projects.

The lecture "Machine Learning 1" covers both symbolic learning methods such as inductive learning (learning from examples, learning by observation), deductive learning (explanation-based learning) and learning from analogies, as well as subsymbolic techniques such as neural networks, support vector machines, genetics Algorithms and reinforcement learning. The lecture introduces the basic principles as well as fundamental structures of learning systems and the learning theory and examines the previously developed algorithms. The design and operation of learning systems is presented and explained in some examples, especially in the fields of robotics, autonomous mobile systems and image processing.

Workload

The total workload for this module is approximately 150 hours.
Module: Machine Learning 2 [M-WIWI-105006]

**Competence Goal**

- Students gain knowledge of the basic methods in the field of machine learning.
- Students understand advanced concepts of machine learning and their application.
- Students can classify, formally describe and evaluate methods of machine learning.
- Students can use their knowledge to select suitable models and methods for selected problems in the field of machine learning.

**Content**

The subject area of machine intelligence and, in particular, machine learning, taking into account real challenges of complex application domains, is a rapidly expanding field of knowledge and the subject of numerous research and development projects.

The lecture "Machine Learning 2" deals with advanced methods of machine learning such as semi-supervised and active learning, deep neural networks (deep learning), pulsed networks, hierarchical approaches, e.g. As well as dynamic, probabilistic relational methods. Another focus is the embedding and application of machine learning methods in real systems.

The lecture introduces the latest basic principles as well as extended basic structures and elucidates previously developed algorithms. The structure and the mode of operation of the methods and methods are presented and explained by means of some application scenarios, especially in the field of technical (sub) autonomous systems (robotics, neurorobotics, image processing, etc.).

**Workload**

The total workload for this module is approximately 150 hours.
Module: Machine Tools and Industrial Handling [M-MACH-105107]

Responsible: Prof. Dr.-Ing. Jürgen Fleischer
Organisation: KIT Department of Mechanical Engineering

Part of:
- Field of Specialization / Field of Specialization: Industrial Automation (Complementary Modules)
- Field of Specialization / Field of Specialization: Design of Mechatronic Systems (mandatory)
- Interdisciplinary Subject

Credits 8
Grading scale Grade to a tenth
Recurrence Each winter term
Duration 1 term

Level 4
Version 2

Mandatory

| T-MACH-110962 | Machine Tools and High-Precision Manufacturing Systems | 8 CR | Fleischer |

Competence Certificate
Oral exam (40 minutes)

Competence Goal
The students
- are able to assess the use and application of machine tools and high-precision manufacturing systems and to differentiate between them in terms of their characteristics and design.
- can describe and discuss the essential elements of machine tools and high-precision manufacturing systems (frame, main spindle, feed axes, peripheral equipment, control unit).
- are able to select and dimension the essential components of machine tools and high-precision manufacturing systems.
- are capable of selecting and evaluating machine tools and high-precision manufacturing systems according to technical and economic criteria.

Content
The module gives an overview of the construction, use and application of machine tools and high-precision manufacturing systems. In the course of the module a well-founded and practice-oriented knowledge for the selection, design and evaluation of machine tools and high-precision manufacturing systems is conveyed. First, the main components of the systems are systematically explained and their design principles as well as the integral system design are discussed. Subsequently, the use and application of machine tools and high-precision manufacturing systems will be demonstrated using typical machine examples. Based on examples from current research and industrial applications, the latest developments are discussed, especially concerning the implementation of Industry 4.0 and artificial intelligence. Guest lectures from industry round off the module with insights into practice.

The individual topics are:
- Structural components of dynamic manufacturing Systems
- Feed axes: High-precision positioning
- Spindles of cutting machine Tools
- Peripheral Equipment
- Machine control unit
- Metrological Evaluation
- Maintenance strategies and condition Monitoring
- Process Monitoring
- Development process for machine tools and high-precision manufacturing Systems
- Machine examples

Workload
1. Presence time lecture/exercise: 15 * 6 h = 90 h
2. Pre- and post-processing time lecture/exercise: 15 * 9 h = 135 h
3. Exam preparation and presence in the same: 15 h
In total: 240 h = 8 LP

**Competence Certificate**

Type of Examination: written exam
Duration of Examination: 60 minutes

**Prerequisites**

None

**Competence Goal**

After having participated in the lecture the participants have gained knowledge on modern techniques of machine vision and pattern recognition which can be used to evaluate camera images. This especially includes techniques in the areas of gray level image analysis, analysis of color images, segmentation of images, describing the geometrical relationship between the image and the 3-dimensional world, and pattern recognition with various classification techniques. The participants have learned to analyze the algorithms mathematically, to implement them in software, and to apply them to tasks in video analysis. The participants are able to analyze real-world problems and to develop appropriate solutions.
Content
The lecture on machine vision covers basic techniques of machine vision. It focuses on the following topics:
image preprocessing
edge and corner detection
curve and parameter fitting
color processing
image segmentation
camera optics
pattern recognition
deep learning

Image preprocessing:
The chapter on image processing discusses techniques and algorithms to filter and enhance the image quality. Starting from an analysis of the typical phenomena of digital camera-based image capturing, the lecture introduces the Fourier transform and the Shannon-Nyquist sampling theorem. Furthermore, it introduces gray level histogram-based techniques including high dynamic range imaging. The discussion of image convolution and typical filters for image enhancement concludes the chapter.

Edge and corner detection:
Gray level edges and gray level corners play an important role in machine vision since gray level edges often reveal valuable information about the boundaries and shape of objects. Gray level corners can be used as feature points since they can be identified easily in other images. This chapter introduces filters and algorithms to reveal gray level edges and gray level corners like the Canny edge detector and the Harris corner detector.

Curve and parameter fitting:
In order to describe an image by means of geometric primitives (e.g. lines, circles, ellipses) instead of just pixels robust curve and parameter fitting algorithms are necessary. The lecture introduces and discusses the Hough transform, total least sum of squares parameter fitting as well as robust alternatives (M-estimators, least trimmed sum of squares, RANSAC)

Color processing:
The short chapter on color processing discusses the role of color information in machine vision and introduces various models for color understanding and color representation. It concludes with the topic of color consistency.

Image Segmentation:
Image segmentation belongs to the core techniques of machine vision. The goal of image segmentation is to subdivide the image into several areas. Each area shares common properties, i.e. similar color, similar hatching, or similar semantic interpretation. Various ideas for image segmentation exist which can be used to create more or less complex algorithms. The lecture introduces the most important approaches ranging from the simpler algorithms like region growing, connected components labeling, and morphological operations up to highly flexible and powerful methods like level set approaches and random fields.

Camera optics:
The content of an image is related by the optics of the camera to the 3-dimensional world. In this chapter the lecture introduces optical models that describe the relationship between the world and the image including the pinhole camera model, the thin lens model, telecentric cameras, and catadioptric sensors. Furthermore, the lecture introduces camera calibration methods that can be used to determine the optical mapping of a real camera.

Pattern recognition:
Pattern recognition aims at recognizing semantic information in an image, i.e. not just analyzing gray values or colors of pixels but revealing which kind of object is shown by the pixels. This task goes beyond classical measurement theory and enters the large field of artificial intelligence. Rather than just being developed and optimized by a programmer, the algorithms are adapting themselves to their specific task using training algorithms that are based on large collections of sample images.

The chapter of pattern recognition introduces standard techniques of pattern recognition in the context of image understanding like the support vector machine (SVM), decision trees, ensemble and boosting techniques. It combines those classifiers with powerful feature representation techniques like the histogram of oriented gradients (HOG) features, locally binary patterns (LBP), and Haar features.

Deep learning:
Throughout recent years standard pattern recognition techniques have more and more been outperformed by deep learning techniques. Deep learning is based on artificial neural networks, a very generic and powerful form of a classifier. The lecture introduces multi-layer perceptrons as the most relevant form of artificial neural networks, discusses training algorithms and strategies to achieve powerful classifiers based on deep learning including deep auto-encoders, convolutional networks, and multi-task learning, among others.
Workload
240 hours, composed out of
hours of lecture: $15 \times 4 \, h = 60 \, h$
preparation time prior to and after lecture: $15 \times 6 \, h = 90 \, h$
exam preparation and exam: 90 h

Learning type
Lecture

Literature
Main results are summarized in the slides that are made available as pdf-files. Further recommendations will be presented in the lecture.

6.120 Module: Major Field: Integrated Product Development [M-MACH-102626]

**Responsible:** Prof. Dr.-Ing. Albert Albers

**Competence Certificate**

oral examination (60 minutes)

**Prerequisites**

None

**Competence Goal**

By working practically in experience-based learning arrangements with industrial development tasks, graduates are able to succeed in new and unknown situations when developing innovative products by using methodological and systematic approaches. They can apply and adapt strategies of development and innovation management, technical system analysis and team leadership to the situation. As a result, they are able to foster the development of innovative products in industrial development teams in prominent positions, taking into account social, economic and ethical aspects.

**Content**

Organizational integration: integrated product development model, core team management and simultaneous engineering, informational integration: innovation management, cost management, quality management and knowledge management

Personal integration: team development and leadership

Guest lectures from the industry

**Annotation**

The participation in the course "Integrated Product Development" requires the simultaneous participation in the lecture (2145156), the workshop (2145157) and the product development project (2145300).

For organizational reasons, the number of participants for the product development project is limited. Therefore, a selection process will take place. Registration for the selection process is made by means of a registration form, which is available annually from April to July on the homepage of the IPEK. Afterwards the selection itself will be discussed in personal interviews with Professor Albers.

The rule here is:

- Students within the course of studies will be decided on the basis of their progress (not only with semesters), which will be determined in a personal interview. The personal selection interviews take place in addition, in order to make the students aware of the special project-oriented format and the time required in correlation with the ECTS points of the course before the final registration for the course.
- With the same study progress after waiting period
- With same waiting time by lot.
- The same procedure is used for students from other courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

lecture
tutorial
product development project
## 6.121 Module: Manufacturing Measurement Technology [M-ETIT-103043]

**Modeled Conditions**
The following conditions have to be fulfilled:

1. You need to have earned at least 75 credits in the following fields:
   - General Mechatronics
   - Interdisciplinary Subject
   - Interdisciplinary Qualifications
   - Field of Specialization
   - Field of Specialization

**Competence Goal**
After successful completion of the module, students are able to work independently on a challenging task in the field of mechatronics or information technology within a given period of time using scientific methods and in compliance with the rules of good scientific practice under guidance and by applying the theoretical and methodological knowledge acquired in the Master's program. Students are able to do research, analyze and abstract the information and to compile and recognize basic principles and laws from less structured information. Students are able to get an overview of a problem, select complex scientific methods and procedures and use them to find solutions or show further potentials. In principle, this also takes into account social and/or ethical aspects.

The students are able to interpret and evaluate their results. They are also able to document their results in a clearly structured, written elaboration using the appropriate technical terminology. Furthermore, students are able to present and defend their results in front of a scientific audience. They have also deepened their problem-solving skills and their competence in transferring the theoretical and methodological knowledge of mechatronics and information technology into concrete applications.

In addition to the subject-related qualification goals, the students also gain knowledge and experience in the areas of project management as well as self and time management. This also includes knowledge and methods of various presentation techniques.

**Content**
The students work independently and with scientific methods on a research topic agreed with the subject examiner, which deals with a problem from the area of the Master's program in Mechatronics and Information Technology.

**Module grade calculation**
The Master's Thesis is written by at least one university lecturer or one senior scientist according to § 14 para. 3 no. 1 KITG and another examiner. As a rule, one of the examiners is Person who has awarded the work in accordance with paragraph 2. If the assessment of these two people does not match, the examination board determines the grade of the Master's Thesis in the context of the assessment of these two persons; he can too order another appraiser. The assessment must be completed within eight weeks of the submission of the Master's Thesis respectively. Section 14 of the study and examination regulations (SPO) regulates further details.

The module grade consists of the Master's Thesis and a presentation (SPO §14, 1b).
**Module: Material Flow in Logistic Systems [M-MACH-104984]**

**Responsible:** Prof. Dr.-Ing. Kai Furmans

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Field of Specialization / Field of Specialization: Industrial Automation (mandatory)
- Interdisciplinary Subject

**Additional Examinations**

**Credits** 9

**Grading scale** Grade to a tenth

**Recurrence** Each winter term

**Duration** 1 term

**Language** German

**Level** 4

**Version** 1

**Mandatory**

<table>

<td>1</td>
</tr>
</tbody>
</table>

**Competence Certificate**
The assessment (Prüfungsleistung anderer Art) consists of the following assignments:

- 40% assessment of the final case study as individual performance,
- 60% semester evaluation which includes working on 5 case studies and defending those (For both assessment types, the best 4 of 5 tries count for the final grade.):
  - 40% assessment of the result of the case studies as group work,
  - 20% assessment of the oral examination during the case study colloquiums as individual performance.

A detailed description of the learning control can be found under Annotations.

**Prerequisites**
none

**Competence Goal**
The student

- acquires comprehensive and well-founded knowledge on the main topics of logistics, an overview of different logistic questions in practice and knows the functionality of material handling systems,
- is able to illustrate logistic systems with adequate accuracy by using simple models,
- is able to realize coherences within logistic systems,
- is able to evaluate logistic systems by using the learnt methods.

**Content**
The module *Material Flow in Logistic Systems* provides comprehensive and well-founded basics for the main topics of logistics. Within the lectures, the interaction between several components of logistic systems will be shown. The module focuses on technical characteristics of material handling systems as well as on methods for illustrating and evaluating logistics systems. To gain a deeper understanding, the course is accompanied by exercises and case studies.

**Annotation**
Students are divided into groups for this course. Five case studies are carried out in these groups. The results of the group work during the lecture period are presented and evaluated in writing. In the oral examination during the case study colloquiums, the understanding of the result of the group work and the models dealt with in the course is tested. The participation in the oral defenses is compulsory and will be controlled. For the written submission the group receives a common grade, in the oral defense each group member is evaluated individually.

After the lecture period, there is the final case study. This case study contains the curriculum of the whole semester. The students work individually on this case study which takes place at a predefined place and time (duration: 4h).

**Recommendation**
Recommended elective subject: Probability Theory and Statistics

**Learning type**
Lecture, tutorial

**Competence Certificate**

Oral exam, about 25 minutes

**Prerequisites**

none

**Competence Goal**

The students are capable to name different lightweight materials and can describe their composition, properties and fields of application. They can describe the hardening mechanisms of lightweight materials and can transfer this knowledge to applied problems.

The students can apply basic mechanical models of composites and can depict differences in the mechanical properties depending on composition and structure. The students can describe the basic principle of hybrid material concepts and can judge their advantages in comparison to bulk materials. The students can name special materials for lightweight design and depict differences to conventional materials. The students have the ability to present applications for different lightweight materials and can balance reasons for their use.

**Content**

Introduction

Constructive, production-orientied and material aspects of lightweight construction

Aluminium-based alloys
Aluminium wrought alloys
Aluminium cast alloys

Magnesium-based alloys
Magnesium wrought alloys
Magnesium cast alloys

Titanium-based alloys
Titanium wrought alloys
Titanium cast alloys

High-strength steels
High-strength structural steels
Heat-treatable and hardenable steels

Composites - mainly PMC
Matrices
Reinforcements

**Workload**

The workload for the lecture "Design with Plastics" is 120 h per semester and consists of the presence during the lectures (21 h), preparation and rework time at home (50 h) and preparation time for the oral exam (49 h).
1. **Competence Certificate**
   The examination takes place in form of a written examination lasting 120 minutes.

2. **Prerequisites**
   M-ETIT-102652 - Messtechnik (German version) must not have started.

3. **Competence Goal**
   - Students have a sound knowledge of the theoretical foundations of measurement technology, including modeling of measurement systems, consideration of nonlinearities, stochastic deviations and stochastic signals, acquisition of analog signals, and frequency and rotational speed measurement.
   - Students are proficient in the approaches to measurement system design in terms of model assumptions, methods, and achievable results.
   - Students are able to analyze and formally describe measurement technology tasks, synthesize possible solutions for measurement systems and assess the properties of the solution obtained.

4. **Content**
   The module deals with the formal, methodical and mathematical fundamentals for the analysis and design of measurement systems. Focal points of the course are
   - Measurement systems and deviations (including scales, the SI systems, modeling of measurement systems)
   - Curve fitting (approximation, interpolation)
   - Stationary behavior of measurement systems (characteristic curve, errors of the characteristic curve, nonlinearities, adjustment)
   - Stochastic measurement errors (probabilistic analysis, samples, statistical test methods, statistic process control, error propagation)
   - Stochastic processes (correlational measurements, spectral description of stochastic signals, system identification, matched filter, Wiener filter)
   - Digitization of analog signals (sampling, quantization, analog-digital converters, digital-analog converters)
   - Frequency and rotational speed measurement (generalized frequency concept, digital speed measurement, detection of direction)

5. **Module grade calculation**
   The module grade is the grade of the written examination.

6. **Annotation**
   In the module a lecture, an exercise and an examination are offered.

7. **Workload**
   The workload includes:
   1. attendance in lectures and exercises: 34 h
   2. preparation / follow-up of lectures and exercises: 51 h
   3. preparation of and attendance in examination: 65 h
   
   total: 150 h = 5 CR

8. **Recommendation**
   Basic knowledge in the fields of “Probability Theory” as well as “Signals and Systems” is helpful.

**Competence Certificate**
oral exam ca. 30 minutes

**Prerequisites**
none

**Competence Goal**
The students know and understand size and scaling effects in micro- and nanosystems. They understand the impact of mechanical phenomena in small dimensions. Based on this they can judge how they determine material processing as well as working principles and design of microsensors and microactuators.

**Content**
1. Introduction: Application and Processing of Microsystems  
2. Scaling Effects  
3. Fundamentals: Stress and Strain, (anisotropic) Hooke's Law  
4. Fundamentals: Mechanics of Beams and Membranes  
5. Thin Film Mechanics: Origin and Role of Mechanical Stresses  
6. Characterization of Mechanical Properties of Thin Films and Small Structures: Measurement of Stresses and Mechanical Parameters such as Young's Modulus and Yield Strength; Thin Film Adhesion and Stiction  
7. Transduction: Piezo-resistivity, Piezo-electric Effect, Electrostatics,...  
8. Aktuation: Inverse Piezo-electric Effect, Shape Memory, Electromagnetic Actuation,...

**Workload**
regular attendance: 22,5 hours  
self-study: 97,5 hours

**Learning type**
lecture

**Literature**

**Competence Goal**

Students understand the basics of the synergistic integration of methods from mechatronics, computer science and artificial intelligence using the example of humanoid robotics. They are acquainted with the basic concepts and methods of machine learning, the description of robot movements and actions as well as artificial neural networks and their application in robotics.

In particular, they are able to apply basic methods to problems and know relevant tools. Using research-oriented examples from humanoid robotics, students have learned – in an interactive way – to think analytically and to proceed in a structured and goal-oriented way when analyzing, formalizing and solving tasks.

**Content**

The lecture addresses topics at the interface between robotics and artificial intelligence, which are illustrated and explained based on examples from current research in the area of humanoid robotics. The lecture introduces fundamental algorithms in robotics and machine learning as well as methods for describing dynamical systems and representing robot motions and actions. This includes an introduction to artificial neural networks, the description of dynamical systems in state space as well as the learning of movement primitives. The topics and content are illustrated by practical examples from humanoid robotics.

**Recommendation**

Der Besuch des Basispraktikums Mobile Roboter wird empfohlen.
Module: Medical Imaging Techniques I [M-ETIT-100384]

Responsible: Prof. Dr. Maria Francesca Spadea
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: Field of Specialization / Field of Specialization: Medical Technology (mandatory)
Interdisciplinary Subject

Mandatory
T-ETIT-101930 Medical Imaging Techniques I 3 CR Spadea

Competence Certificate
Success control is carried out in the form of a written test of 120 minutes.

Prerequisites
none

Competence Goal
Students have a thorough understanding of all methods of medical imaging with ionizing radiation. They know the physical basics, the technical solutions and the essential aspects when using imaging in medicine.

Content
- X-ray physics and technology of X-ray imaging
- Digital radiography, X-ray image intensifier, flat X-ray detectors
- Theory of imaging systems, modulation transfer function
- and quantum detection efficiency
- Computer tomography CT
- Ionizing radiation, dosimetry and radiation protection
- SPECT and PET

Module grade calculation
The module grade is the grade of the written exam.

Workload
Each credit point corresponds to approximately 30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

Attendance time in lectures (2 h 15 appointments each) = 30 h
Self-study (3 h 15 appointments each) = 45 h
Preparation / post-processing = 20 h
Total effort approx. 95 hours = 3 LP
### 6.130 Module: Medical Imaging Techniques II [M-ETIT-100385]

**Mandatory**

| T-ETIT-101931 | Medical Imaging Techniques II | 3 CR | Spadea |

**Competence Certificate**

Success control is carried out in the form of a written test of 120 minutes.

**Prerequisites**

none

**Competence Goal**

Students have a thorough understanding of all methods of medical imaging without ionizing radiation. They know the physical basics, the technical solutions and the essential aspects when using imaging in medicine.

**Content**

- Ultrasound imaging  
- Thermography  
- Optical tomography  
- Impedance tomography  
- Imaging of bioelectric sources  
- Endoscopy  
- Magnetic resonance imaging  
- Multi-modal imaging  
- Molecular imaging

**Module grade calculation**

The module grade is the grade of the written exam.

**Workload**

Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

- Attendance time in lectures (2 h 15 appointments each) = 30 h  
- Self-study (3 h 15 appointments each) = 45 h  
- Preparation / post-processing = 20 h  
- Total effort approx. 95 hours = 3 LP

**Recommendation**

The contents of the M-ETIT-100384 module are required.
Module: Methods of Signal Processing [M-ETIT-100540]

</tr>
</tbody>
</table>

**Mandatory**

| T-MACH-108383 | Microsystem Simulation | 4 CR | Korvink |

**Competence Certificate**

Oral exam (20 min)

**Prerequisites**

There are no requirements for background, however, I recommend that you have at least the following: Basic knowledge in engineering, physics, and mathematics.

**Competence Goal**

Students are able to formulate the finite element method such as needed for mechanics, heat transfer, or transport processes. They are familiar with approximation using functions, and the relation between a finite element CAD model, and the underlying mechanism to solve the equations, an essential basis for modern engineering design.

**Content**

Microsystems are multiphysical devices. For example, in order to measure infrared radiation, a microsystem might use the Seebeck (thermoelectric) effect, which couples heat to electrical currents – thus radiation, heat flow, and charge transport are coupled in a multiphysical manner.

Because microsystem components are very small (in the micrometre range), often the operational modalities will be described better by statistical mechanics or even quantum mechanics, so that we have to take caution to use the right models.

In many cases, commercial tools are unavailable, so that engineers are forced to build their own simulation programs to be able to make intelligent designs.

In this lecture you will learn the fundamentals needed to build such a computer program. Because we want to be very efficient in learning, and not re-invent all the wheels or confront computer science issues such as compilation and libraries, you will learn to build your program in the higher level programming environment Mathematica ®.

**Annotation**

The lecture is aimed at students who wish to learn the basis of numerical modelling and simulation programs, so as to understand the functioning of these most important engineering design tools. Practical examples are taken from microsystems engineering to illustrate the concepts.

**Workload**

- Literature: 20 h
- Lessons: 21 h
- Preparation and Review: 50 h
- Exam preparation: 30 h

**Recommendation**

Regular attendance is definitely recommended, as well as doing all the exercises.
Literature

The following references are used by the lecturers to prepare the lecture. Students are not required to access most of these, but of course it does not hurt! Hints for efficient further reading, depending on interest, will be provided during the lecture.

**Mandatory**

| T-MACH-101910 | Microactuators | 4 CR | Kohl |

**Competence Certificate**

Written exam: 60 min

**Prerequisites**

none

**Competence Goal**

- Knowledge of the actuation principles including pros and cons  
- Knowledge of important fabrication technologies  
- Explanation of layout and function of the microactuators  
- Calculation of important properties (time constants, forces, displacements, etc.)  
- Development of a layout based on specifications

**Content**

- Basic knowledge in the material science of the actuation principles  
- Layout and design optimization  
- Fabrication technologies  
- Selected developments  
- Applications  

The lecture includes amongst others the following topics:

- Microelectromechanical systems: linear actuators, microrelais, micromotors  
- Medical technology and life sciences: Microvalves, micropumps, microfluidic systems  
- Microrobotics: Microgrippers, polymer actuators (smart muscle)  
- Information technology: Optical switches, mirror systems, read/write heads

**Workload**

- Time of attendance: 15 * 1.5 h = 22.5 h  
- Preparation and follow up: 15 * 5.5 h = 82.5 h  
- Exam Preparation and Exam: 15 h  

Total: 120 h = 4 LP

**Literature**

**Competence Certificate**

Oral exam: 45 min

**Prerequisites**

none

**Competence Goal**

- Knowledge of the principles of energy conversion
- Knowledge of the underlying concepts of thermodynamics and materials science
- Explanation of layout, fabrication and function of the treated devices
- Calculation of important properties (time constants, forces, displacements, power, degree of efficiency, etc.)
- Development of a layout based on specifications

**Content**

- Basic physical principles of energy conversion
- Layout and design optimization
- Technologies
- Selected devices
- Applications

The lecture includes amongst others the following topics:

Micro energy harvesting of vibrations
Thermal micro energy harvesting
Microtechnical applications of energy harvesting
Heat pumps in micro technology
Micro cooling

**Workload**

Time of attendance: 15 * 1,5 h = 22,5 h
Preparation and follow up: 15 * 5,5 h = 82,5 h
Exam Preparation and Exam: 15 h
Total: 120 h = 4 LP

#### Competence Certificate
Success control is carried out as part of a written overall examination (120 minutes) of the selected courses, which in total meet the minimum requirement for LP.

#### Prerequisites
none

#### Competence Goal
The students have a deep understanding of microwave technology with a focus on passive components of microwave circuit technology. This includes the functioning of the most important microwave components such as waveguides, filters, resonators, couplers, power dividers up to directional lines and circulators. Students are able to understand and describe how these components work. You can transfer this knowledge to other areas of high-frequency technology and use it to analyze and solve high-frequency problems. You are able to apply what you have learned in a practical way.

#### Content
In-depth lecture on high-frequency technology: The focus of the lecture is the teaching of the functioning of the most important passive microwave components, starting with waveguides, through filters, resonators, power dividers and couplers to directional lines and circulators. Accompanying the lecture, exercises are given on the lecture material. These are discussed in a large hall exercise and the associated solutions are presented in detail.

#### Module grade calculation
The module grade is the grade of the written exam.

#### Annotation
WS: German  
SS: English  
The exam is in each semester and for every student bilingual.

#### Workload
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes: Attendance study time lecture / exercise: 45 h Self-study time including exam preparation: 105 h A total of 150 h = 5 LP

#### Recommendation
Knowledge of the basics of high frequency technology is helpful.
6.137 Module: Microwave Engineering Lab [M-ETIT-105300]

**Responsibility:** Prof. Dr.-Ing. Thomas Zwick

**Organisation:** KIT Department of Electrical Engineering and Information Technology

**Part of:** Interdisciplinary Subject

<table>
<thead>
<tr>
<th>Credits</th>
<th>Grading scale</th>
<th>Recurrence</th>
<th>Duration</th>
<th>Language</th>
<th>Level</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>Grade to a tenth</td>
<td>Each term</td>
<td>1 term</td>
<td>German</td>
<td>4</td>
<td>1</td>
</tr>
</tbody>
</table>

**Mandatory**

| T-ETIT-110789 | Microwave Engineering Lab | 6 CR | Zwick |

**Competence Certificate**

To prepare the laboratory tests, each laboratory group has to do some homework together before the experiment and hand in a simple copy to the supervisor immediately before the start of the experiment. The tasks for the experiment as such are processed and logged during the implementation. The protocol should be handed over to the supervisor immediately after the experiment has been carried out. Before each experiment, there is a written exam or oral (approx. 20 min., No aids) the content of the experiment.

**Prerequisites**

none

**Competence Goal**

The students have in-depth knowledge of high-frequency components and systems as well as how the most important high-frequency measuring devices work (network analyzer, spectrum analyzer, noise measurement, power measurement, oscilloscope, antenna measurement). They are also familiar with handling high-frequency measuring devices and components. They are able to independently select and operate measuring devices based on the specific applications and to interpret the measurement results. In addition, they are able to work together in a team in a self-organized manner.

**Content**

Under the motto: "Practical relevance through state-of-the-art equipment and current problems", the students are offered a modern and technically sophisticated high-frequency laboratory at master's level. The aim of the experiments is to deepen the theory imparted in the lectures in practice and to train the use of high-frequency measuring devices and RF components. In groups of 2-4 students, various experiments are carried out and recorded on 8 afternoons. The order and topics of the experiments can vary.

**Module grade calculation**

The grade for the test execution consists of the preparation, the protocol and the written or oral learning objective control for the respective test. The final grade for the entire laboratory results from the overall impression of the performance. Students who appear unprepared for the respective experiment are not allowed to take part in the experiment. The attempt must be repeated at another time.

**Workload**

Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes: Attendance study time laboratory: 45 h Test preparation, protocols, test preparation: 135 h A total of 180 h = 6 LP

**Recommendation**

Knowledge of microwave measurement technology and RF components and systems is helpful.
Module: Microwaves Measurement Techniques [M-ETIT-100424]

**Responsible:** Prof. Dr.-Ing. Thomas Zwick

**Organisation:** KIT Department of Electrical Engineering and Information Technology

</table>

**Competence Certificate**
The success control is carried out as part of an oral overall examination (approx. 20 minutes) of the selected courses, which in total meet the minimum requirement for LP.

**Prerequisites**
none

**Competence Goal**
The students have an in-depth knowledge of the structure and functioning of microwave measuring devices (signal generator, power measurement, frequency measurement, spectral analyzer, network analyzer). They understand the special features of measuring powers, frequencies and scattering parameters in the microwave range. You can apply the knowledge you have learned in practice and interpret the measurement results. You can analyze and assess possible sources of error in the measurement. You are able to design measurement setups with given measurement values and to carry out the measurements correctly.

**Content**
This lecture contains all basic areas of today's high-frequency measurement techniques, such as power measurement, frequency measurement, spectral analysis and network analysis. Particular attention is paid to the description of those measurement systems and methods that are used in modern applications.

**Module grade calculation**
The module grade is the grade of the oral exam.

**Workload**
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:
- Attendance study time lecture / exercise: 45 h
- Self-study time including exam preparation: 75 h
A total of 120 h = 4 LP

**Recommendation**
Knowledge of the basics of high frequency technology is helpful.
6.139 Module: Modern Control Concepts I [M-MACH-105308]

**Competence Certificate**
A performance assessment is held in form of a written examination of 60 minutes.

**Prerequisites**
None

**Competence Goal**
After attending the lecture, the students are able to

- Analyze linear systems with respect to various properties,
- Identify linear dynamic models,
- Design linear controllers with feedforward control in the time domain and incorporate actuator limits,
- Use Matlab for the realization of the considered concepts and
- Implement controllers in software.

**Content**

1. Introduction (system classes, nomenclature)
2. Equilibria
3. Linearization (software based, Hartman-Grobman-Theorem)
4. Parameter identification of linear dynamic models (SISO+MIMO)
5. PID-controller (realization, design-hints, Anti-Windup-mechanisms)
6. Concept of 2DOF-Controllers (structure, reference signal design)
7. State space (geometric view)
8. Controller with state feedback and integrator expansion
   (LQ-design, Eigenvalue placement, decoupling design)
9. Observer (LQG-design, disturbance observer, reduced observer)

**Workload**

1. Attendance time Lecture: 15 * 1.5h = 22.5h
2. Pre- and postprocessing time Lecture: 15 * 3.5h = 52.5h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

**Recommendation**
The attendance of the following lecture is recommended:

- Grundlagen der Mess- und Regelungstechnik

Alternatively: comparable lectures at „Fakultät für Elektrotechnik und Informationstechnik“

**Learning type**
Lecture

Mandatory
T-MACH-106691 Modern Control Concepts II 4 CR Groell

Competence Certificate
A performance assessment is held in form of an oral examination of 30 minutes.

Prerequisites
None

Competence Goal
After attending the lectures, the students are able to

- analyze and control multivariable systems,
- analyze and control DAE systems,
- analyze and control time delay systems,
- use Matlab for simulation, analysis and synthesis of the discussed concepts,
- solve linear control problems with more routine.

Content
1. Discrete time systems
2. The role of zeros (different kinds of zeros, zero dynamics, internal model principle, repetitive control, 2DoF structures, controller design via Diophantine equations)
3. Limitations of control systems (existence question, limitations w.r.t. time and frequency domain)
4. Linear multivariable systems (state space with structural invariants, canonical forms in frequency domain, polynomial matrices, matrix fractions)
5. Multivariable control for LTI systems (coprime factorization, relative gain array analysis, decentralized and cooperative controls, decoupling controls, tracking controls)
6. Internal model control (internal stability, Youla parametrization, predictive structures, different 2DoF structures)
7. Advanced control loop structures (serial and parallel cascades, multiple controller structures, inferential control, split range control, extremal controls)
8. Differential-algebraic systems of equations
9. Time delay systems
10. Open topic (based on learning progress and interests, the aforementioned topics are deepened or other topics, such as time-varying systems, model order reduction, alternative stability concepts, etc. are discussed.)

Workload
1. Attendance time Lecture: 15 * 1.5h = 22.5h
2. Pre- and postprocessing time Lecture: 15 * 3.5h = 52.5h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

**Competence Certificate**

A performance assessment is held in form of an oral examination of 30 minutes.

**Prerequisites**

None

**Competence Goal**

After attending the lectures, the students are able to

- analyze nonlinear systems and their solutions w.r.t. stability,
- design nonlinear controls with feedforward using different methods.

**Content**

1. Qualitative theory of ODEs (advanced solution term in ODEs, bifurcation, Poincaré index, equilibria in infinity)
2. Lyapunov stability (definitions, theorems, topological properties of domains of attraction, Barbashin-Krasovskii-LaSalle’s theorem, Barbalat’s lemma)
3. Feedback linearization
4. Modifications of feedback linearization (zero dynamics, advanced linearization)
5. Flatness-based controller design
6. Lyapunov-based controller design (backstepping desing, nonlinear damping, tracking control)
7. Passivity-based controller design
8. Sliding mode control
9. Alternative linearization concepts
10. Open topic (based on learning progress and interests, the aforementioned topics are deepened or other topics, such as alternative stability concepts, observer design for nonlinear systems, basics in differential geometry, analysis and synthesis of underactuated systems, hybrid systems, Luré-type control or adaptive control.)

**Workload**

1. Attendance time Lecture: 15 * 1.5h = 22.5h
2. Pre- and postprocessing time Lecture: 15 * 3.5h = 52.5h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

**Recommendation**

The attendance of the following lecture is recommended:

- Grundlagen der Mess- und Regelungstechnik
- Moderne Regelungskonzepte I und II

Alternatively: comparable lectures at „Fakultät für Elektrotechnik und Informationstechnik”

**Learning type**

Lecture
Literature

**6.142 Module: Modern Radio Systems Engineering [M-ETIT-100427]**

**Responsible:** Prof. Dr.-Ing. Thomas Zwick  
**Organisation:** KIT Department of Electrical Engineering and Information Technology  
**Part of:** Interdisciplinary Subject

**Competence Certificate**  
The success control is carried out as part of an oral overall examination (approx. 20 minutes) of the selected courses, which in total meet the minimum requirement for LP.

**Prerequisites**  
none

**Competence Goal**  
After attending this course, students will be able to design an analog front end for a radio transmission system at the block diagram level. In particular, the non-idealities of typical components of high-frequency technology and their effects on the overall system performance are part of the knowledge imparted. The students also have an in-depth understanding of various radar modulation methods and the relationships to approval conditions and performance.

**Content**  
The course gives a general overview of radio transmission systems and their components. The focus is on the system components realized in analog technology and their non-idealities. Based on the physical functioning of the various system components, parameters are derived that allow an examination of their influence on the overall system performance.

The exercise is closely linked to the lecture and mainly consists of computer-based exercises that allow a visualization of the influences of various non-idealities on the overall system performance and demonstrate the practical system design of modern radio transmission systems.

**Module grade calculation**  
The module grade is the grade of the oral exam.

**Workload**  
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

- Attendance study time lecture: 30 h  
- Attendance study time computer exercise SystemVue ESL Design Software / MATLAB: 15 h  
- Self-study time including exam preparation: 75 h  
  A total of 120 h = 4 LP

**Recommendation**  
Knowledge of the basics of radio frequency technology and communications technology is helpful.
6.143 Module: Motion in Human and Machine - Seminar [M-INFO-102555]

**Responsible:** Prof. Dr.-Ing. Tamim Asfour

**Organisation:** KIT Department of Informatics

**Part of:** Field of Specialization / Field of Specialization: Robotics (Complementary Modules)

**Interdisciplinary Subject**

**Mandatory**

| T-INFO-105140 | Motion in Human and Machine - Seminar | 3 CR | Asfour |

**Competence Goal**

The student knows procedures for modelling human motion, as well as possibilities for its processing and analysis. He/she knows methods for learning motion primitives and mapping human motion to robots that have different kinematics and dynamics and can apply them in new contexts.

**Content**

This interdisciplinary block seminar deals with methods of modelling, generating and controlling movements in humans and robot systems. Students get an insight into this interdisciplinary field and learn the basics of biological motion, biomechanical simulation, robotics, and machine learning. In the introduction, motion generation as effect of muscle contraction is discussed. It will be shown how movement patterns can be identified and categorized based on the observation of human movements and how these patterns can be reproduced on a humanoid robot. Finally, methods for the learning of movement primitives from human demonstration will be presented and their application for the generation of motion for humanoid robots will be explained.

**Annotation**

The block practical course is an interdisciplinary event in cooperation with the University of Stuttgart, University of Tübingen and the Hertie Institute for Clinical Brain Research; Centre for Integrative Neuroscience in Tübingen.

**Workload**

Seminar with 3 SWS, 3 LP
3 LP corresponds to 90 hours, including
30 hours attendance time
15 hours group work
20 hours literature research
20 hours manuscript preparation
5 hours video creation

**Recommendation**

Programming experience in C++, Python or Matlab is recommended.
Module: Motor Vehicle Laboratory [M-MACH-102695]

**Responsibility:** Dr.-Ing. Michael Frey

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Field of Specialization / Field of Specialization: Automotive Engineering (Internships)

**Competence Certificate**

After completion of the experiments: written examination

Duration: 90 minutes

Auxiliary means: none

**Prerequisites**

None

**Competence Goal**

The students have deepened their knowledge on motor vehicles acquired in lectures and can apply it practically. They have an overview of the applied measuring technique and can execute and analyse measurements for the handling of given problem definitions. They are ready to analyze and to judge measurement results.

**Content**

1. Determination of the driving resistances of a passenger vehicle on a roller dynamometer; measurement of the engine performance of the test vehicle
2. Investigation of a twin-tube and a single-tube shock absorber
3. Behavior of car tyres under longitudinal forces and lateral forces
4. Behavior of car tires on wet road surface
5. Rolling resistance, energy dissipation and high-speed strength of car tires
6. Investigation of the moment transient characteristic of a Visco clutch

**Annotation**

The admission is limited to 12 persons per group.

**Workload**

regular attendance: 31,5 hours

self-study: 103,5 hours

**Literature**

3. Gnadler, R.: Documents to the Motor Vehicle Laboratory

**Competence Certificate**

The assessment of success takes place in the form of a written examination lasting 120min. The grade corresponds to the result of the written examination.

**Prerequisites**

none

**Competence Goal**

Students will understand the physical limits of CMOS scaling and will be able to analyze the function of conventional nanoelectronic devices. Students will also understand the operation of novel nanoelectronic and quantum electronic devices and will be able to design this kind of devices that are based on quantum mechanical effects. They develop the ability to design nanoelectronic sensors and devices and can understand and analyze the fabrication methods for nano- and quantum electronic devices.

**Content**

Nanoelectronics deals with integrated circuits whose typical length scale is well below 100nm. In this regime, physical effects, in particular of quantum mechanical origin, occur and strongly influence the scaling of classical microelectronic devices. This ultimately leads to a new form of electronic components as well as novel operation principles. A special form of nanoelectronics is quantum electronics in which quantum mechanical effects are exploited on purpose to build an entirely new class of devices whose performance reaches far beyond any other microelectronics devices. Well-known examples are superconducting digital electronics which enables to build, for example, microprocessors with clock rates exceeding several 100GHz, or the quantum computer, which will lead to a change of paradigms in the field of information processing.

Within this context, the module "Nano- and quantum electronics" intends to give students an overview of the theoretical and practical aspects of nano- and quantum electronics. In particular, it discusses the following topics:

- Limitations of conventional CMOS technology
- Quantum mechanical effects in the field of nano- and quantum electronics (quantized conductance, Coulomb blockade, tunnel effect, etc.)
- Hot-electron effect
- Nano- and quantum-technological manufacturing and analysis methods
- Nanostructure field-effect transistors
- Quantum dots
- Carbon nanotube field-effect transistor
- Resonant tunnel diodes
- Unipolar resonant tunnel transistor
- Single Electron Transistor (SET)
- Josephson junction based analog and digital electronics
- Quantum bits, quantum computers and quantum computing

The tutorial is closely linked to the lecture and deals with special aspects concerning the development of nano- and quantum electronics. In particular, the development and system integration of such devices for various applications is discussed by means of exercises.

**Module grade calculation**

The module grade is the grade of the written examination.
Workload
A workload of approx. 175h is required for the successful completion of the module. This is composed as follows:

- Attendance time in lectures and exercises: $18 \times 1.5h + 6 \times 1.5h = 36h$
- Preparation and follow-up of lectures: $21 \times 3h = 54h$
- Preparation and follow-up of tutorials: $7 \times 5h = 35h$
- Preparation for the exam: 50h

Recommendation
Successful completion of the modules "Superconductivity for Engineers" and ",Einführung in die Quantentheorie für Elektrotechniker" is recommended.
6.146 Module: Nonlinear Control Systems [M-ETIT-100371]

**Responsible:** Prof. Dr.-Ing. Sören Hohmann

**Organisation:** KIT Department of Electrical Engineering and Information Technology

**Part of:**
- Field of Specialization / Field of Specialization: Control Engineering in Mechatronics (Complementary Modules)
- Field of Specialization / Field of Specialization: Robotics (Complementary Modules)

</tbody>
</table>

Mandatory

T-ETIT-101906 Nonlinear Optics 6 CR Koos

Competence Certificate

The oral exam is offered continuously upon individual appointment.

Prerequisites

none

Competence Goal

The students

- understand and can mathematically describe the effect of basic nonlinear-optical phenomena using optical susceptibility tensors,
- understand and can mathematically describe wave propagation in nonlinear anisotropic materials,
- have an overview and can quantitatively describe common second-order nonlinear effects comprising the electro-optic effect, second-harmonic generation, sum- and difference frequency generation, parametric amplification and optical rectification,
- have an overview and can quantitatively describe the Kerr effect and other common third-order nonlinear effects, comprising self- and cross-phase modulation, four-wave mixing, self-focussing, and third-harmonic generation,
- have an overview and can describe nonlinear-optical interaction in active devices such as semiconductor optical amplifiers
- conceive the basic principles of various phase-matching techniques and can apply them to practical design problems,
- conceive the basic principles electro-optic modulators, can apply them to practical design problems, and have an overview on state-of-the art devices,
- conceive the basic principles third-order nonlinear signal processing and can apply them to practical design problems.

Content

1. The nonlinear optical susceptibility: Maxwell’s equations and constitutive relations, relation between electric field and polarization, formal definition and properties of the nonlinear optical susceptibility tensor,
2. Wave propagation in nonlinear anisotropic materials
3. Second-order nonlinear effects and devices: Linear electro-optic effect / Pockels effect, second-harmonic generation, sum- and difference-frequency generation, phase matching, parametric amplification, optical rectification
4. Third-order nonlinear effects and devices: Nonlinear refractive index and Kerr effect, self- and cross-phase modulation, four-wave mixing, self-focussing, third-harmonic generation
5. Nonlinear effects in active optical devices

Module grade calculation

The module grade is the grade of the oral exam.

There is a bonus system based on the problem sets that are solved during the tutorials: During the term, 3 problem sets will be collected in the tutorial and graded without prior announcement. If for each of these sets more than 70% of the problems have been solved correctly, a bonus of 0.3 grades will be granted on the final mark of the oral exam.

Workload

Approx. 180 h – 30 h lectures, 30 h exercises, 120 h homework and self-studies
Literature

Competence Certificate
Written exam, 60 min

Prerequisites
None

Competence Goal
- Knowledge of the actuation and sensing principles including pros and cons
- Knowledge of important fabrication technologies
- Explanation of layout and function of the actuators and sensors
- Calculation of important properties (time constants, forces, displacements, sensitivity etc.)
- Development of a layout based on specifications

Content
The content of the lecture is among others:

- Piezo actuators
- Magnetostriktive actuators
- Shape memory actuators
- Electro-/Magnetorheological actuators
- Sensors: Concepts, materials, fabrication
- Micromechanical sensors: Pressure, force, inertial sensors
- Temperature sensors
- Sensors for bioanalytics
- Mechano-magnetic sensors

Workload
lecture time 18 h
self preparation: 102 h

Learning type
Lecture

<td></td>
</tr>
</tbody>
</table>

**Competence Certificate**
Success control takes the form of a written examination (120 minutes).

**Prerequisites**
none

**Competence Goal**
Students who pass the module are familiar with basic concepts and ways of thinking on the topic of numerical mathematics. They know different procedures for solving linear and nonlinear problems in numerical mathematics. They are furthermore able to use numerical methods for solving problems from applications in an independent, critical, and needs-based way.

**Content**
In the lecture basic ideas and numerical methods for the following topics will be presented:

- systems of linear equations, Gauss-algorithm, LR-decomposition, Cholesky decomposition  
- eigenvalue problems, von-Mises iteration  
- linear optimization (also called linear programming)  
- error analysis  
- Newton’s method  
- quadrature, Newton-Cotes formulas  
- numerical solution of initial value problems, Runge-Kutta methods  
- finite difference method for solving boundary value problems  
- finite elements

**Module grade calculation**
The module grade is the grade of the written exam.

**Workload**
Approximately 150h workload. The workload includes:

45h - attendance in lectures, exercises and examination  
105h – self studies:

- follow-up and deepening of the course content  
- solving problem sheets  
- literature study and internet research on the course content  
- preparation for the module examination

</tbody>
</table>

**Mandatory**

| T-ETIT-100756 | Optical Design Lab | 6 CR | Stork |

**Competence Certificate**
The examination consists of an oral exam (20 min).

**Prerequisites**
none

**Competence Goal**
The students can apply previous theoretical knowledge in optics to design optical systems based on ray tracing, using a typical optics design software.
The students can apply typical analysis methods to evaluate the imaging performance of optical systems.
The students can recognize aberrations in optical systems and apply methods to compensate them.

**Content**
The students participating in this lab are given the opportunity to gain practical experience in the use of software tools commonly used in industry for the design of optical elements and systems. Thus improving their knowledge in optical engineering.

**Module grade calculation**
The module grade is the grade of the oral exam.

**Workload**
Approximately 162 h workload of the student.
The workload includes:

1. attendance in lectures an exercises: 36 h
   - 9 exercises of 4 h
2. preparation / follow-up: 51 h
   - preparation 9x3 h
   - writing lab reports: 8x3 h
3. preparation of and attendance in examination: 75h

**Recommendation**
Basic knowledge in optics. The participation in the course Optical Engineering is strongly advised.

Competence Certificate

Oral examination (approx. 20 minutes). The individual dates for the oral examination are offered regularly.

Prerequisites

none

Competence Goal

The students

- understand the peculiarities of optical communications, and how optical signals are generated, transmitted and received,
- know about sampling, quantization and coding,
- learn the basics about noise on reception,
- understand the properties of a linear and a nonlinear optical fibre channel, grasp the idea of channel capacity and spectral efficiency,
- know about various forms of modulation,
- acquire knowledge of optical transmitter elements,
- understand the function of optical amplifiers,
- have a basic understanding of optical receivers,
- know the sensitivity limits of optical systems, and
- understand how these limits are measured.

Content

The course concentrates on basic optical communication concepts and connects them with the properties of physical components. The following topics are discussed:

- Advantages and limitations of optical communication systems
- Optical transmitters comprising lasers and modulators
- Optical receivers comprising direct and heterodyne reception
- Characterization of signal quality

Module grade calculation

The module grade is the grade of the oral exam.

Workload

Approx. 120 hours workload for the student. The amount of work is included:

- 30 h - Attendance times in lectures
- 15 h - Exercises
- 75 h - Preparation / revision phase

Recommendation

Knowledge of the physics of the pn-junction

Literature

Detailed textbook-style lecture notes can be downloaded from the IPQ lecture pages.

Mandatory

T-ETIT-101945  Optical Waveguides and Fibers  4 CR  Koos

Competence Certificate
Type of Examination: Oral exam
Duration of Examination: approx. 20 minutes
Modality of Exam: The written exam is offered continuously upon individual appointment.

Prerequisites
None

Competence Goal
The students
- conceive the basic principles of light-matter-interaction and wave propagation in dielectric media and can explain the origin and the implications of the Lorentz model and of Kramers-Kronig relation,
- are able to quantitatively analyze the dispersive properties of optical media using Sellmeier relations and scientific databases,
- can explain and mathematically describe the working principle of an optical slab waveguide and the formation of guided modes,
- are able to program a mode solver for a slab waveguide in Matlab,
- are familiar with the basic principle of surface plasmon polariton propagation,
- know basic structures of planar integrated waveguides and are able to model special cases with semi-analytical approximations such as the Marcatili method or the effective-index method,
- are familiar with the basic concepts of numerical mode solvers and the associated limitations,
- are familiar with state-of-the-art waveguide technologies in integrated optics and the associated fabrication methods,
- know basic concepts of of step-index fibers, graded-index fibers and microstructured fibers,
- are able to derive and solve basic relations for step-index fibers from Maxwell's equations,
- are familiar with the concept of hybrid and linearly polarized fiber modes,
- can mathematically describe signal propagation in single-mode fibers design dispersion-compensated transmission links,
- conceive the physical origin of fiber attenuation effects,
- are familiar with state-of-the-art fiber technologies and the associated fabrication methods,
- can derive models for dielectric waveguide structures using the mode expansion method,
- conceive the principles of directional couplers, multi-mode interference couplers, and waveguide gratings,
- can mathematically describe active waveguides and waveguide bends.
Content

1. Introduction: Optical communications
2. Fundamentals of wave propagation in optics: Maxwell’s equations in optical media, wave equation and plane waves, material dispersion, Kramers-Kroig relation and Sellmeier equations, Lorentz and Drude model of refractive index, signal propagation in dispersive media.
3. Slab waveguides: Reflection from a plane dielectric boundary, slab waveguide eigenmodes, radiation modes, inter- and intramodal dispersion, metal–dielectric structures and surface plasmon polariton propagation.
4. Planar integrated waveguides: Basic structures of integrated optical waveguides, guided modes of rectangular waveguides (Marcatili method and effective-index method), basics of numerical methods for mode calculations (finite difference- and finite-element methods), waveguide technologies in integrated optics and associated fabrication methods
5. Optical fibers: Optical fiber basics, step-index fibers (hybrid modes and LP-modes), graded-index fibers (infinitely extended parabolic profile), microstructured fibers and photonic-crystal fibers, fiber technologies and fabrication methods, signal propagation in single-mode fibers, fiber attenuation, dispersion and dispersion compensation
6. Waveguide-based devices: Modeling of dielectric waveguide structures using mode expansion and orthogonality relations, multimode interference couplers and directional couplers, waveguide gratings, material gain and absorption in optical waveguides, bent waveguides

Module grade calculation
The module grade is the grade of the oral exam.

There is, however, a bonus system based on the problem sets that are solved during the tutorials: During the term, 3 problem sets will be collected in the tutorial and graded without prior announcement. If for each of these sets more than 70% of the problems have been solved correctly, a bonus of 0.3 grades will be granted on the final mark of the oral exam.

Workload
Total 120 h, hereof 45 h contact hours (30 h lecture, 15 h tutorial) and 75 h homework and self-studies.

Recommendation
Solid mathematical and physical background, basic knowledge of electrodynamics

**Competence Certificate**  
The assessment consists of a written exam (120 min) taking place in the recess period.

**Prerequisites**  
none

**Competence Goal**  
- The students know as well the mathematical basics as the fundamental methods and algorithms to solve constraint and unconstraint nonlinear static optimization problems.  
- They can solve constraint and unconstraint dynamic optimization by using the calculus of variations approach and the Dynamic Programming method.  
- Also they are able to transfer dynamic optimization problem to static problems.  
- The students know the mathematical relations, the pros and cons and the limits of the particular optimization methods.  
- They can transfer problems from other fields of their studies in a convenient optimization problem formulation and they are able to select and implement suitable optimization algorithms for them by using common software tools.

**Content**  
The module teaches the mathematical basics that are required to solve optimization problems. The first part of the lecture treats methods for solving static optimization problems. The second part of the lecture focuses on solving dynamic optimization problems by using the method of Euler-Lagrange and the Hamilton method as well as the dynamic programming approach.

**Module grade calculation**  
The module grade is the grade of the written exam.

**Workload**  
Each credit point stands for an amount of work of 30h of the student. The amount of work includes

1. presence in lecture/exercises/tutorial(optional) (2+1 SWS: 45h1.5 LP)  
2. preparation/postprocessing of lecture/exercises (90h3 LP)  
3. preparation/presence in the written exam (15h0.5 LP)

Mandatory

T-MACH-105228 Organ Support Systems 4 CR Pylatiuk

Competence Certificate
A performance assessment is held in form of a written examination of 45 minutes.

Prerequisites
none

Competence Goal
Students have comprehensive knowledge of the functioning of support systems and their components (e.g. sensors, actuators) for different human organs (e.g. heart, kidney, liver, eye, ear, locomotor system). They know the physical basics, the technical solutions and the essential aspects of these medical technology systems and their current limitations. Furthermore, they know bioreactors and other methods of using the body's own cells to support organs (tissue engineering).
Furthermore, they have comprehensive knowledge of organ transplantation and its limitations.

Content
Hemodialysis, liver dialysis, heart-lung machine, artificial hearts, biomaterials, definition and classification of organ support and organ replacement, hearing prostheses, visual prostheses, exoskeletons, neuroprostheses, endoprostheses, tissue engineering.

Module grade calculation
The module grade is the grade of the written exam.

Workload
1. Attendance time Lecture: 15 * 2h = 30h
2. Pre- and postprocessing time Lecture: 15 * 3h= 45h
3. Exam preparation and attendance exam: 45h
Total: 120h = 4 LP

Recommendation
The content of module MMACH-105235 complements this lecture.

**Prerequisites**
Module "M-ETIT-100524 - Solar Energy" must not have started.

**Modeled Conditions**
The following conditions have to be fulfilled:

1. The module M-ETIT-100524 - Solar Energy must not have been started.
Module: Physical and Data-Based Modelling [M-ETIT-105468]

**Description**

**Module:** 6.161 Module: Physical and Data-Based Modelling [M-ETIT-105468]

**Responsible:** Prof. Dr.-Ing. Sören Hohmann

**Organisation:** KIT Department of Electrical Engineering and Information Technology

**Part of:** Field of Specialization / Field of Specialization: Control Engineering in Mechatronics (Complementary Modules)

**Interdisciplinary Subject**

**Credits:** 6

**Grading scale:** Grade to a tenth

**Recurrence:** Each summer term

**Duration:** 1 term

**Language:** English

**Level:** 4

**Version:** 4

**Mandatory**

| T-ETIT-111013 | Physical and Data-Based Modelling | 6 CR | Hohmann |

**Competence Certificate**

Oral examination of approximately 20 minutes.

**Prerequisites**

none

**Competence Goal**

- The students understand the general model concept as well as the characteristics of physical and data-based modeling and can describe their differences.
- They are able to structure complex systems and systematically analyze dependencies of subsystems.
- They are able to explain the general procedure of physical and data-based modeling, apply it to technical systems, and analyze the results.
- They are able to apply causal and non-causal modeling approaches and distinguish between them.
- Students have gained an understanding of generalized, cross-domain, physical relationships and can develop models for electrical, mechanical, pneumatic and hydraulic systems. They can identify states and constraints.
- They can describe the relationship between generalized, cross-domain, physical models and basic procedures of physical-based control and explain their advantages / limitations based on basic knowledge of control engineering.
- They can explain different identification procedures for parametric models of static and dynamic systems, select, and apply appropriate procedures for given technical problems.
- Students know basic procedures of learning-based identification and can describe their limitations.
- The students can estimate and judge the effects of disturbances and real conditions on the identification results.

**Content**

In contrast to the former "Modellbildung und Identifikation", this course requires a profound knowledge in multivariable systems and optimization. Thus, attendance of the lecture Optimization of Dynamic Systems (ODS) is an absolute precondition to appropriately follow the course! Prior knowledge about (linear) state space representations and realizations, the concept of "zeros" in the state space, and observability is highly recommended!

This course aims at engineering students that focus on a systemic and control engineering curriculum. It encompasses fundamental topics along the complete process of modeling technical systems. Particularly, two major areas will be covered:

On the one hand, physical-based modeling techniques which derive formal model equations based on analyzing the physical first-principles of technical systems. This includes, inter alia, generalized equivalent circuits, bond graphs, port-Hamiltonian systems, variational analysis (Euler-Lagrange of the first kind). Selected topics of physical-based control methods will also be briefly introduced to integrate the complete physical control design in the wider control context and highlight its possible benefits.

On the other hand, data-based identification techniques will be covered which are used to identify concrete model parameters for a given technical system from experimental data sets. When combining the identification with an initial, non-physical, structural set up of model equations, the complete process is often referred to as data-based modeling or black-box modeling.

**Module grade calculation**

The module grade is the grade of the oral exam.
Workload
Each credit point corresponds to 30 hours of workload (of the student). The workload includes:
1. attendance time in lecture/exercise (3+1 SWS: 60h 2 LP)
2. pre-/postprocessing of the lecture (90h 3 LP)
3. preparation/attendance oral exam (30h 1 LP)

Recommendation
In contrast to the former “Modellbildung und Identifikation”, this course requires a profound knowledge in multivariable systems and optimization. Thus, attendance of the lecture Optimization of Dynamic Systems (ODS) is an absolute precondition to appropriately follow the course! Prior knowledge about (linear) state space representations and realizations, the concept of “zeros” in the state space, and observability is highly recommended (see e.g. Regelung linearer Mehrgrößensysteme (RLM))!

Furthermore, sound understanding of Higher Mathematics I-III, linear electrical network theory and engineering mechanics / physics is required to successfully attend the lecture, exercise tasks / case studies, and exam.
Module: Physiology and Anatomy for Biomedical Engineering [M-ETIT-105874]

**Responsible:** Prof. Dr. Werner Nahm  
**Organisation:** KIT Department of Electrical Engineering and Information Technology  
**Part of:** Field of Specialization / Field of Specialization: Medical Technology (Complementary Modules)  
Interdisciplinary Subject

</tbody>
</table>

**Competence Certificate**

The examination is carried out in the form of a written test of 120 minutes.

The examination includes the contents of Physiologie und Anatomie I (offered every winter term) and Physiologie und Anatomie II (offered every summer term).

**Prerequisites**

The modules "M-ETIT-100390 - Physiologie und Anatomie I" and "M-ETIT-100391 - Physiologie und Anatomie II" must not been started.

**Content**

**Physiologie und Anatomie I (Wintersemester)**

The lecture provides basic knowledge about the essential organ systems of humans and medical terminology. It is aimed at students of technical courses who are interested in physiological issues.

Thematic blocks:

- Introduction - organizational levels in the body
- Basics of biochemistry in the body
- Cell structure, cell physiology, tissue
- Transport mechanisms in the body
- Neurophysiology I (nerve cell, muscle cell, the autonomic nervous system)
- Heart and circulatory system with blood and lymph
- Breathing

**Physiologie und Anatomie II (Sommersemester)**

The lecture extends the knowledge imparted in the first part of the lecture and introduces other human organ systems.

Thematic blocks:

- Acid / base balance, water balance, kidney function
- Thermoregulation
- Digestive system and nutrition
- Hormonal System Neurophysiology II
  - (Organization of the CNS, somatosensory, motor skills, integrative performance of the brain)

**Module grade calculation**

The module grade is the grade of the written exam.

**Annotation**

This module is part of the Orientation Exam of SPO BSc Medizintechnik § 8. The examination must be taken by the end of the 2nd semester. A repeat examination must be taken by the end of the 3rd semester.
Workload
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

- Attendance time in lectures (2 h, 30 appointments each) = 60 h
- Self-study (3 h, 30 appointments each) = 90 h
- Preparation / post-processing = 30 h

Total effort approx. 180 hours = 6 LP

Learning type
Winter/summer term:

- WT: Physiologie und Anatomie I
- ST: Physiologie und Anatomie II

**Competence Certificate**

Type of Examination: oral exam (approx. 20 minutes)

**Prerequisites**

none

**Competence Goal**

The students

- understand the electronic and optical characteristics of organic semiconductors
- know the fundamental differences between organic and conventional inorganic semiconductors.
- have basic knowledge of manufacturing and processing technologies,
- have knowledge of organic light-emitting diodes, organic solar cells and photodiodes, organic field-effect transistors and organic lasers,
- have an overview of the possible applications, markets and development lines for these components.
- are able to work in multidisciplinary teams with engineers, chemists and physicists

**Content**

1. Introduction
2. Optoelectronic properties of organic semiconductors
3. Organic light emitting diodes (OLEDs)
4. Applications in Lighting and Displays
5. Organic FETs
6. Organic photodetectors and solar cells
7. Lasers and integrated optics

**Module grade calculation**

The module grade is the grade of the written exam.

**Annotation**

Lecture and exercises are held as required in German or English.

**Workload**

1. lecture: 21 h
2. recapitulation and self-studie: 42 h
3. preparation of examination: 27 h

**Recommendation**

Knowledge of semiconductor components

**Literature**

The corresponding documents are available online in the VAB (https://studium.kit.edu/)
**6.165 Module: Plug-and-Play Material Handling [M-MACH-104983]**

**Responsible:** Prof. Dr.-Ing. Kai Furmans

**Competence Certificate**

The success control takes place as a study achievement in the form of a presentation of at least 10 minutes.

**Prerequisites**

None.

**Competence Goal**

- Naming and explaining the basics of plug-and-play conveyor technology  
- Extend your knowledge of plug-and-play conveyor technology through independent research  
- Applying the learned theory to a problem from practice  
- Using the Software Framework ROS (Robot Operating System)  
- Implementation of a decentralized communication protocol  
- Designing components for additive manufacturing (3D printing)  
- Evaluate developed solutions on the basis of logistical key figures

**Content**

- Theoretical basics and structure of plug-and-play conveyor technology  
- Practical application of content in teamwork with mobile and stationary platforms  
- Planning and implementation of a control system using the software framework ROS  
- Definition, design and implementation of interfaces between teams and platforms  
- Presentation of the work results and evaluation of these on the basis of logistical key figures

**Workload**

- regular attendance: 80 hours  
- self-study: 40 hours

**Learning type**

- seminar

<td>6 CR</td>
</tr>
</tbody>
</table>

**Competence Certificate**

The examination takes place in form of a written examination lasting 120 minutes.

**Prerequisites**

None

**Competence Goal**

Students will be familiar with state-of-the-art power semiconductors including their application related features. Furthermore students will be familiar with the circuit topologies for DC/DC and DC/AC power conversion. They know the associated modulation and control methods and characteristics. They are able to analyze the circuit topologies with regard to harmonics and power losses. This also includes the thermal design of power electronic circuits. In addition, they are able to select and combine suitable circuits for given electrical energy conversion requirements.

**Content**

In the lecture, power electronic circuits for DC/DC and DC/AC power conversion using IGBTs and MOSFETs are presented and analyzed. First, the basic properties of self-commutated circuits under idealized conditions are elaborated using the DC/DC converter as an example. Then, self-commutated power converters for three-phase applications are presented and analyzed with respect to modulation and their AC and DC terminal behavior. Based on the real power semiconductor behavior in on- and off-state the device losses are calculated. Furthermore the thermal design of power converters is explained using thermal equivalent circuits of power devices and cooling equipment. The voltage and current stress on the power semiconductors in switching operation is explained as well as protective snubber circuits allowing a reliable operation within the safe operating area of the devices.

In detail, the following topics are treated:

- Power Semiconductors
- Commutation principles
- DC/DC converters
- Self-commutated 1ph and 3ph DC/AC inverters
- Modulation methods (Fundamental frequency modulation, Pulse width modulation with 3rd harmonic injection, Space vector modulation)
- Multilevel inverters
- Switching behavior in hard and soft switching applications
- Loss calculation
- Thermal equivalent circuits, thermal design
- Snubber circuits.

The lecturer reserves the right to adapt the contents of the lecture to current needs without prior notice.

**Module grade calculation**

The module grade is the grade of the written exam.

**Workload**

14x lecture and 14x exercise à 2 h = 56 h
14x wrap-up of the lecture à 1 h = 14 h
14x preparation of the exercise à 2 h = 28 h
Preparation for the exam = 75 h
Examination time = 2 h
Total = approx. 175 h (corresponds to 6 LP)

</tbody>
</table>

**Mandatory**

| T-MACH-102164 | Practical Training in Basics of Microsystem Technology | 4 CR | Last |

**Competence Certificate**

Written exam, 60 min.

**Prerequisites**

None

**Competence Goal**

Insight into the real, practical work at the Institute of Microstructure Technology.

**Content**

In the practical training includes nine experiments:

1. Hot embossing of plastics micro structures
2. Micro electroforming
3. X-ray optics
4. UV-lithography
5. Fluidic polymer components by example of a microfluidic mixer
6. Additive prototyping of microstructures
7. Introduction to SAW biosensors
8. Light diffraction at photomasks
9. Atomic force microscopy
10. Centrifugal microfluidics

Each student takes part in only five experiments.
The experiments are carried out at real workstations at the IMT and coached by IMT-staff.

**Annotation**

The internship takes place in the laboratories of the IMT at the CN. Meeting place: Building 307, room 322.

Participation requests to Mrs. Novotny, marie.nowotny@kit.edu

**Workload**

regular attendance: 20 hours
self-study: 100 hours, Preparation of the five experiments

**Recommendation**

Attend at least one of the lectures Micro System Technology I or II.
Read the practical course documents provided as pdf-file!

**Learning type**

Lab, Self-study of the internship documents and guided experiments during the course.

**Literature**

Practical course documents provided as pdf-file.
Competence Certificate
A performance assessment is held in form of a written examination of 45 minutes.

Prerequisits
none

Competence Goal
Students have a comprehensive understanding of the functioning and anatomical construction of organs, which are assigned to different medical disciplines. Furthermore, they know the physical basics, the technical solutions and the essential aspects of the application of medical technology procedures in diagnostics and therapy. They are familiar with common clinical pictures in the different medical disciplines and their relevance in health care. Through their acquired knowledge, students can communicate with physicians about medical-technical procedures and assess mutual expectations more realistically.

Content
Definition of disease and health and history of medicine, evidence-based medicine" and personalized medicine, nervous system, conduction, musculoskeletal system, cardiovascular system, anesthesia, respiratory system, sensory organs, gynecology, digestive organs, surgery, nephrology, orthopedics, immune system, genetics.

Module grade calculation
The module grade is the grade of the written exam.

Workload
1. Attendance time Lecture: 15 * 2h = 30h
2. Pre- and postprocessing time Lecture: 15 * 3h= 45h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Recommendation
The content of module MMACH-105228 complements this lecture.

**Mandatory**

| T-MACH-105162 | Fundamentals of Automobile Development I | 2 CR | Frech |

**Competence Certificate**

The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

**Prerequisites**

None

**Competence Goal**

The students have an overview of the fundamentals of the development of automobiles. They know the development process, the national and the international legal requirements that are to be met. They have knowledge about the thermo-management, aerodynamics and the design of an automobile. They are ready to judge goal conflicts in the field of automobile development and to work out approaches to solving a problem.

**Content**

1. Process of automobile development  
2. Conceptual dimensioning and design of an automobile  
3. Laws and regulations – National and international boundary conditions  
4. Aerodynamical dimensioning and design of an automobile I  
5. Aerodynamical dimensioning and design of an automobile II  
6. Thermo-management in the conflict of objectives between styling, aerodynamic and packaging guidelines I  
7. Thermo-management in the conflict of objectives between styling, aerodynamic and packaging guidelines II

**Workload**

The total work load for this module is about 60 Hours (2 Credits). The partition of the work load is carried out according to the credit points of the courses of the module. The work load for courses with 2 credit points is about 60 hours.

**Learning type**

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

**Prerequisites**
None

**Competence Goal**
The students are familiar with the selection of appropriate materials and the choice of adequate production technology. They have knowledge of the acoustical properties of the automobiles, covering both the interior sound and exterior noise. They have an overview of the testing procedures of the automobiles. They know in detail the evaluation of the properties of the complete automobile. They are ready to participate competently in the development process of the complete vehicle.

**Content**
1. Application-oriented material and production technology I
2. Application-oriented material and production technology II
3. Overall vehicle acoustics in the automobile development
4. Drive train acoustics in the automobile development
5. Testing of the complete vehicle
6. Properties of the complete automobile

Lecture
Module: Product Development – Methods of Product Engineering [M-MACH-102718]

### Responsible
Prof. Dr.-Ing. Albert Albers

### Organisation
KIT Department of Mechanical Engineering

### Credits
6

### Grading scale
Grade to a tenth

### Recurrence
Each summer term

### Duration
1 term

### Language
German/English

### Level
4

### Version
2

### Competence Certificate
**Written examination** (processing time: 120 min + 10 min reading time)

### Prerequisites
None

### Competence Goal
The students are able to ...

- classify product development in companies and differentiate between different types of product development.
- name the relevant influencing factors of a market for product development.
- name, compare and use the central methods and process models of product development within moderate complex technical systems.
- explain problem solving techniques and associated development methods.
- explain product profiles and to differentiate and choose suitable creative techniques of solution/idea generation finding on this basis.
- use design guidelines to create simple technical systems and to explain these guidelines.
- name and compare quality assurance methods; to choose and use suitable methods for particular applications.
- explain the different methods of design of experiment.
- explain the costs in development process.

### Content
**Basics of Product Development: Basic Terms, Classification of the Product**
Development into the industrial environment, generation of costs / responsibility for costs

**Concept Development: List of demands / Abstraction of the Problem Definition / Creativity Techniques / Evaluation and selection of solutions**

**Drafting: Prevailing basic rules of Design / Design Principles as a problem oriented accessory**

**Rationalization within the Product Development: Basics of Development**

**Management/ Simultaneous Engineering and Integrated Product Development/Development of Product Lines and Modular Construction Systems**

**Quality Assurance in early Development Phases: Methods of Quality Assurance in an overview/QFD/FMEA**

### Workload
1. Time of presence lecture: 15 * 3h= 45 h
2. Prepare/follow-up lecture: 15 * 4,5 h = 67,5 h
3. Time of presence exercise: 4 * 1,5h = 6 h
4. Prepare/follow-up exercise: 4 * 3 h = 12 h
5. Exam preparation and time of presence: 49,5 h
Total: 180 h = 6 LP

**Competence Certificate**

A performance assessment (non-graded) is obligatory and can be oral, a written exam, or of another kind.

**Prerequisites**

None

**Competence Goal**

The students acquire in the lab profound knowledge about the scientific theories, principles and methods of Production Engineering. Afterwards they are able to evaluate and design complex production systems according to problems of manufacturing and process technologies, materials handling, handling techniques, information engineering as well as production organisation and management.

After completion this lab, the students are able

- to analyse and solve planning and layout problems of the discussed fields,
- to evaluate and configure the quality and efficiency of production, processes and products,
- to plan, control and evaluate the production of a production enterprise,
- to configure and evaluate the IT architecture of a production enterprise,
- to design and evaluate appropriate techniques for conveying, handling and picking within a production system,
- to design and evaluate the part production and the assembly by considering the work processes and the work places.

**Content**

The production technique laboratory (PTL) is a collaboration of the institutes wbk, IFL, IMI and ifab.

1. Computer Aided Product Development (IMI)
2. Computer communication in factory (IMI)
3. Production of parts with CNC turning machines (wbk)
4. Controlling of production systems using PLCs (wbk)
5. Automated assembly systems (wbk)
6. Optical identification in production and logistics (IFL)
7. RFID identification systems (IFL)
8. Storage and order-picking systems (IFL)
9. Design of workstations (ifab)
10. Time study (ifab)
11. Accomplishment of workplace design (ifab)

**Competence Certificate**

Written Exam (60 min)

**Prerequisites**

None

**Competence Goal**

The students ...

- are capable to comment on the content covered by the module.
- are capable of substantially quality philosophies.
- are able to apply the QM tools and methods they have learned about in the module to new problems from the context of the module.
- are able to analyze and evaluate the suitability of the methods, procedures and techniques they have learned about in the module for a specific problem.

**Content**

Based on the quality philosophies Total Quality Management (TQM) and Six-Sigma, the module will specifically address the needs of a modern quality management. The process orientation in a modern company and the process-specific fields of quality assurance are presented in detail. Preventive as well as non-preventive quality management methods, which are state of the art in operational practice today, are content of the module. The use of suitable measurement techniques in production engineering (production measurement technology) as well as their potential levels of integration in the production system are discussed. The use of suitable statistical methods for data analysis and their modern extension by methods of artificial intelligence are be discussed. The contents are complemented by legal aspects in the field of quality management.

Main topics of the module:

- The term "Quality"  
- Total Quality Management (TQM)  
- Six-Sigma and universal methods and tools within the DMAIC cycle  
- QM in early product stages – Determination and realization of customer requirements  
- QM in product development  
- Production measurement Technology  
- QM in production - statistical Methods  
- Artificial intelligence and machine learning in quality Management  
- Operating behaviour and reliability  
- Legal aspects in QM

**Workload**

1. Presence time lecture: 15 * 2 h = 30 h  
2. Pre- and post-processing time lecture: 15 * 3 h = 45 h  
3. Exam preparation and presence in the same: 45 h  
In total: 120 h = 4 LP

**Mandatory**

| T-MACH-106424 | Rail System Technology | 4 CR | Cichon |

**Competence Certificate**

Oral examination  
Duration ca. 20 minutes  
No tools or reference materials may be used during the exam.

**Prerequisites**

none

**Competence Goal**

- The students understand relations and interdependencies between rail vehicles, infrastructure and operation in a rail system.
- Based on operating requirements and legal framework they derive the requirements concerning a capable infrastructure and suitable concepts of rail vehicles.
- They recognize the impact of alignment, understand the important function of the wheel-rail-contact and estimate the impact of driving dynamics on the operating program.
- They evaluate the impact of operating concepts on safety and capacity of a rail system.
- They know the infrastructure to provide power supply to rail vehicles with different drive systems.

**Content**

1. Railway System: railway as system, subsystems and interdependencies, definitions, laws, rules, railway and environment, economic impact  
2. Operation: Transportation, public transport, regional transport, long-distance transport, freight service, scheduling  
3. Infrastructure: rail facilities, track alignment, railway stations, clearance diagram  
4. Wheel-rail-contact: carrying of vehicle mass, adhesion, wheel guidance, current return  
5. Vehicle dynamics: tractive and brake effort, driving resistance, inertial force, load cycles  
6. Signaling and Control: operating procedure, succession of trains, European Train Control System, blocking period, automatic train control  
7. Traction power supply: power supply of rail vehicles, comparison electric traction and diesel traction, dc and ac networks, system pantograph and contact wire, filling stations

**Annotation**

A bibliography is available for download (Ilias-platform).

**Competence Certificate**

Oral examination  
Duration ca. 20 minutes  
No tools or reference materials may be used during the exam.

**Prerequisites**

none

**Competence Goal**

- The students learn the role of rail vehicles and understand their classification. They understand the basic structure und know the functions of the main systems. They understand the overall tasks of vehicle system technology.  
- They learn functions and requirements of car bodies and judge advantages and disadvantages of design principles. They know the functions of the car body’s interfaces.  
- They know about the basics of running dynamics and bogies.  
- The students learn about advantages and disadvantages of different types of traction drives and judge, which one fits best for each application.  
- They understand brakes from a vehicular and an operational point of view. They assess the fitness of different brake systems.  
- They know the basic setup of train control management system and understand the most important functions.  
- They specify and define suitable vehicle concepts based on requirements for modern rail vehicles.

**Content**

1. Vehicle system technology: structure and main systems of rail vehicles  
2. Car body: functions, requirements, design principles, crash elements, coupling, doors and windows  
3. Bogies: forces, running gears, bogies, Jakobs-bogies, active components, connection to car body, wheel arrangement  
4. Drives: principles, electric drives (main components, asynchronous traction motor, inverter, with DC supply, with AC supply, without line supply, multisystem vehicles, hybrid vehicles, electric driveline, non-electric drives)  
5. Brakes: basics, principles (wheel brakes, rail brakes, blending), brake control (requirements and operation modes, pneumatic brake, electropneumatic brake, emergency brake, parking brake)  
6. Train control management system: definition of TCMS, bus systems, components, network architectures, examples, future trends

**Competence Certificate**

See partial achievements (Teilleistung)

**Prerequisites**

See partial achievements (Teilleistung)

**Competence Goal**

- Students are able to understand the RL problem and challenges.
- Students can differentiate between different RL algorithms and understand their underlying theory.
- Students will know the mathematical tools necessary to understand RL algorithms.
- Students can implement RL algorithms for various tasks.
- Students understand current research questions in RL.

**Content**

Reinforcement Learning (RL) is a sub-field of machine learning in which an artificial agent has to interact with its environment and learn how to improve its behaviour by trial and error. For doing so, the agent is provided with an evaluative feedback signal, called reward, that it perceives for each action performed in its environment. RL is one of the hardest machine learning problems, as, in contrast to standard supervised learning, we do not know the targets (i.e., the optimal actions) for our inputs (i.e., the state of the environment) and we also need to consider the long-term effects of the agent’s actions on the state of the environment. Due to recent successes, RL has gained a lot of popularity with applications in robotics, automation, health care, trading and finance, natural language processing, autonomous driving and computer games. This lecture will introduce the concepts and theory of RL and review current state of the art methods with a particular focus on RL applications in robotics. An exemplary list of topics is given below:

- Primer in Machine Learning and Deep Learning
- Supervised Learning of Behaviour
- Introduction in Reinforcement Learning
- Dynamic Programming
- Value Based Methods
- Policy Optimization and Trust Regions
- Episodic Reinforcement Learning and Skill Learning
- Bayesian Optimization
- Variational Inference, Max-Entropy RL and Versatility
- Model-based Reinforcement Learning
- Offline Reinforcement Learning
- Inverse Reinforcement Learning
- Hierarchical Reinforcement Learning
- Exploration and Artificial Curiosity
- Meta Reinforcement Learning

**Workload**

Approximately 150 hours, divided into:
- 30 hours of lecture attendance
- 15 hours of exercise attendance
- 75 hours of post-processing and working on exercise sheets
- 30 hours of exam preparation.
**Recommendation**

- Students should be familiar with the content of the "Foundations of Artificial Intelligence" lecture.
- Good Python knowledge is required.
- Good mathematical background knowledge is required.
6.190 Module: Reliability and Test Engineering [M-MACH-106050]

**Responsible:** Dr.-Ing. Thomas Gwosch  
Prof. Dr.-Ing. Sven Matthiesen

**Organisation:** KIT Department of Mechanical Engineering

**Part of:**  
Field of Specialization / Field of Specialization: Automotive Engineering (Internships)  
Field of Specialization / Field of Specialization: Industrial Automation (Internships)  
Field of Specialization / Field of Specialization: Control Engineering in Mechatronics (Internships)  
Field of Specialization / Field of Specialization: Robotics (Internships)  
Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Internships)  
Interdisciplinary Subject

**Mandatory**

| T-MACH-111840 | Reliability and Test Engineering | 5 CR | Gwosch |

**Competence Certificate**
The grade is composed of the evaluation of a final report following the practical part. The assessment criteria are as follows:

- Structure of the report
- Comprehensibility and comprehensibility
- Preparation of the tests
- Use of test and reliability methods
- Formulation and answering of test hypotheses
- Test evaluation, comprehensible results

Attendance and active participation in the lab is mandatory.

**Prerequisites**
keine

**Competence Goal**
The students:

- know the relevance of reliability and test engineering in engineering practice.
- know the methods of reliability and test engineering and the components and tools used.
- are able to carry out test planning, test execution and test interpretation for a given problem on a test bench by themselves.

**Content**
The students learn the methods of reliability and test engineering and the components used. Furthermore, they are able to independently carry out test planning, test execution and test interpretation for a given problem on a test bench.

The following contents are taught in the lecture:

- Relevance of reliability and test engineering in the industry.
- Overview of test equipment
- Test strategies and statistical test planning
- Testing with hypotheses
- Reliability models

The implementation of test planning, test execution and test interpretation on a demonstrator test bench is part of the practical session subsequent to the lecture (See also Event 2145351: Workshop for Reliability and Test Engineering).

**Module grade calculation**
The module grade is the grade of the examination performance of another type.

**Annotation**
In case of questions please contact lrt@ipek.kit.edu

The number of participants is limited, an application is necessary. For details please check the lab's web page https://www.ipek.kit.edu/2976.php
Workload
150 h

Recommendation
We strongly recommend the attendance of the MSuP lectures. Students who have not (yet) attended are recommended to learn the contents in advance.

Learning type
Materials/lecture notes are supplied via ILIAS.

**Mandatory**

**Competence Certificate**
The assessment consists of a written exam according to Section 4(2), 1 of the examination regulation.

**Prerequisites**
None

**Competence Goal**
The student:

- understands the motivation and the global context of renewable energy resources.
- gains detailed knowledge about the different renewable resources and technologies as well as their potentials.
- understands the systemic context and interactions resulting from the increased share of renewable power generation.
- understands the important economic aspects of renewable energies, including electricity generation costs, political promotion and marketing of renewable electricity.
- is able to characterize and where required calculate these technologies.

**Content**
1. General introduction: Motivation, Global situation
2. Basics of renewable energies: Energy balance of the earth, potential definition
3. Hydro
4. Wind
5. Solar
6. Biomass
7. Geothermal
8. Other renewable energies
9. Promotion of renewable energies
10. Interactions in systemic context
11. Excursion to the “Energieberg” in Mühlburg

**Workload**
The total workload for this course is approximately 105.0 hours. For further information see German version.

**Competence Certificate**
See partial Achievements (Teilleistung)

**Prerequisites**
See partial Achievements (Teilleistung)

**Modeled Conditions**
You have to fulfill one of 2 conditions:

1. The module M-INFO-102224 - Practical Project Robotics and Automation I (Software) must not have been started.
2. The module M-INFO-102230 - Practical Project Robotics and Automation II (Hardware) must not have been started.

**Competence Goal**
The student knows concrete solutions for different problems in robotics. He/she uses methods of inverse kinematics, grasp and motion planning, and visual perception. The student can implement solutions in the programming language C++ with the help of suitable software frameworks.

**Content**
The practical course is offered as an accompanying course to the lectures Robotics I-III. Every week, a small team of students will work on solving a given robotics problem. The list of topics includes robot modeling and simulation, inverse kinematics, robot programming via state charts, collision-free motion planning, grasp planning, robot vision and robot learning.

**Workload**
Practical course with 4 SWS, 6 LP
6 LP corresponds to 180 hours, including
2 hours introductory event
18 hours initial familiarization with the software framework
120 hours group work
40 hours attendance time

**Recommendation**
6.193 Module: Robotics I - Introduction to Robotics [M-INFO-100893]

**Responsible:** Prof. Dr.-Ing. Tamim Asfour

**Organisation:** KIT Department of Informatics

**Mandatory**

| T-INFO-108014 | Robotics I - Introduction to Robotics | 6 CR | Asfour |

**Competence Certificate**
See partial achievements (Teilleistung)

**Prerequisites**
See partial achievements (Teilleistung)

**Competence Goal**
The student is able to apply the presented concepts to simple and realistic tasks from robotics. This includes mastering and deriving the mathematical concepts relevant for robot modeling. Furthermore, the student masters the kinematic and dynamic modeling of robot systems, as well as the modeling and design of simple controllers. The student knows the algorithmic basics of motion and grasp planning and can apply these algorithms to problems in robotics. He/she knows algorithms from the field of image processing and is able to apply them to problems in robotics. He/she is able to model and solve tasks as a symbolic planning problem. The student has knowledge about intuitive programming procedures for robots and knows procedures for programming and learning by demonstration.

**Content**
The lecture provides an overview of the fundamentals of robotics using the examples of industrial robots, service robots and autonomous humanoid robots. An insight into all relevant topics is given. This includes methods and algorithms for robot modeling, control and motion planning, image processing and robot programming. First, mathematical basics and methods for kinematic and dynamic robot modeling, trajectory planning and control as well as algorithms for collision-free motion planning and grasp planning are covered. Subsequently, basics of image processing, intuitive robot programming especially by human demonstration and symbolic planning are presented.

In the exercise, the theoretical contents of the lecture are further illustrated with examples. Students deepen their knowledge of the methods and algorithms by independently working on problems and discussing them in the exercise. In particular, students can gain practical programming experience with tools and software libraries commonly used in robotics.

**Workload**
Lecture with 3 SWS + 1 SWS Tutorial, 6 LP
6 LP corresponds to 180 hours, including
15 * 3 = 45 hours attendance time (lecture)
15 * 1 = 15 hours attendance time (tutorial)
15 * 6 = 90 hours self-study and exercise sheets
30 hours preparation for the exam
### Module: Robotics II - Humanoid Robotics [M-INFO-102756]

**Mandatory**

| T-INFO-105723 | Robotics II - Humanoid Robotics | 3 CR | Asfour |

**Competence Certificate**  
See partial achievements (Teilleistung)

**Prerequisites**  
See partial achievements (Teilleistung)

**Competence Goal**  
The students have an overview of current research topics in autonomous learning robot systems using the example of humanoid robotics. They are able to classify and evaluate current developments in the field of cognitive humanoid robotics. The students know the essential problems of humanoid robotics and are able to develop solutions on the basis of existing research.

**Content**  
The lecture presents current work in the field of humanoid robotics that deals with the implementation of complex sensorimotor and cognitive abilities. In the individual topics different methods and algorithms, their advantages and disadvantages, as well as the current state of research are discussed. The topics addressed are: Applications and real world examples of humanoid robots; biomechanical models of the human body, biologically inspired and data-driven methods of grasping, imitation learning and programming by demonstration; semantic representations of sensorimotor experience as well as cognitive software architectures of humanoid robots.

**Workload**  
Vorlesung mit 2 SWS, 3 LP.  
3 LP entspricht ca. 90 Stunden, davon  
ca. 15 * 2h = 30 Std. Präsenzzeit Vorlesung  
ca. 15 * 2h = 30 Std. Vor- und Nachbereitungszeit Vorlesung  
ca. 30 Std. Prüfungsvorbereitung und Präsenz in selbiger

**Recommendation**  
Robotik I – Einführung in die Robotik and Mechano-Informatik in der Robotik is recommended.

**Competence Certificate**
See partial achievements (Teilleistung)

**Prerequisites**
See partial achievements (Teilleistung)

**Competence Goal**
The student can name the main sensor principles used in robotics.
The student can explain the data flow from physical measurement through digitization to the use of the recorded data for feature extraction, state estimation and semantic scene understanding.
The student is able to propose and justify suitable sensor concepts for common tasks in robotics.

**Content**
The lecture supplements the lecture Robotics I with a broad overview of sensors used in robotics. The lecture focuses on visual perception, object detection, simultaneous localization and mapping (SLAM) and semantic scene interpretation. The lecture is divided into two parts:

In the first part a comprehensive overview of current sensor technologies is given. A basic distinction is made between sensors for the perception of the environment (exteroceptive) and sensors for the perception of the internal state (proprioceptive).

The second part of the lecture concentrates on the use and interpretation of exteroceptive sensors in robotics. The topics covered include tactile exploration and visual data processing, including advanced topics such as feature extraction, object detection, simultaneous localization and mapping (SLAM) and semantic scene understanding.

**Workload**
Lecture with 2 SWS, 3 LP
3 LP corresponds to 90 hours, including
15 * 2 = 30 hours attendance time
15 * 2 = 30 hours self-study
30 hours preparation for the exam

**Recommendation**
Attending the lecture Robotics I – Introduction to Robotics is recommended.
Module: Seamless Engineering [M-MACH-105725]

**Responsible:** Prof. Dr.-Ing. Kai Furmans
Prof. Dr.-Ing. Eric Sax

**Organisation:** KIT Department of Mechanical Engineering

**Part of:**
- Field of Specialization / Field of Specialization: Automotive Engineering (Internships)
- Field of Specialization / Field of Specialization: Power Engineering (Internships)
- Field of Specialization / Field of Specialization: Microsystems Technology (Internships)
- Field of Specialization / Field of Specialization: Industrial Automation (Internships)
- Field of Specialization / Field of Specialization: Control Engineering in Mechatronics (Internships)
- Field of Specialization / Field of Specialization: Robotics (Internships)
- Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Internships)

| Mandatory | Seamless Engineering | 9 CR | Furmans, Sax |

**Competence Certificate**

Examination of another type. The module grade is the grade of the brick. The description of the form of examination can be found in the description of the partial performance.

**Prerequisites**

None

**Competence Goal**

After successful completion of the course, the students are able to model and parameterise the requirements and boundary conditions for typical mechatronic systems. In addition, students learn the ability to select the appropriate procedures, processes, methods and tools for the development of a mechatronic system.

Important core competences in the areas of communication, problem solving and self-organisation are further essential components of the workshop, which enable the students to do reflected work independently and in a team.

**Content**

This module is designed to teach students how to develop a heterogeneous integrated mechatronic system. In the lecture, students are introduced to a system-oriented, higher-level approach to the description, assessment and development of a mechatronic system.

Parallel to this, the contents taught are applied and deepened in the practical part on hardware that is close to industry. The students learn the systematic development in a simulative environment as well as the transition from simulation to real hardware.

To achieve this, important components of software development in the robotics environment are taught. This includes, among other things, the basics of programming (Python) as well as the handling of the framework "Robot Operating System (ROS)". In addition, students gain insights into the use of sensors and actuators, image processing, autonomous navigation of automated guided vehicles and robotic grasping.

**Annotation**

None

**Workload**

1. attendance time lecture and exercise: 45 h
2. interdisciplinary qualification: 45 h
3. group work project: 130 h
4. colloquia and final event: 30 h
5. exam preparation and presence in the same: 20 h

In total: 270 = 9 LP
**Recommendation**
None

</tr>
</tbody>
</table>

### Mandatory

| T-MACH-108737 | Seminar Data-Mining in Production | 3 CR | Lanza |

### Competence Certificate

Alternative test achievement

### Prerequisites

None

### Competence Goal

The students...

- can name, describe and distinguish between different methods, procedures and techniques of production data analysis.
- can perform basic data analyses with the data mining tool KNIME.
- can analyze and evaluate the results of data analyses in the production environment.
- are able to derive suitable recommendations for action.
- are able to explain and apply the CRISP-DM model.

### Content

In the age of Industry 4.0, large amounts of production data are generated by the global production networks and value chains. Their analysis enables valuable conclusions about production and lead to an increasing process efficiency. The aim of the module is to get to know production data analysis as an important component of future industrial projects. The students get to know the data mining tool KNIME and use it for analyses. A specific industrial use case with real production data enables practical work and offers direct references to industrial applications. The participants learn selected methods of data mining and apply them to the production data. The work within the seminar takes place in small groups on the computer. Subsequently, presentations on specific data mining methods have to be prepared.

### Annotation

The number of students is limited to twelve. Dates and deadlines for the seminar will be announced at https://www.wbk.kit.edu/studium-und-lehre.php.

### Workload

- regular attendance: 10 hours
- self-study: 80 hours

**Mandatory**

| T-MACH-108692 | Seminar for Rail System Technology | 3 CR | Cichon |

**Competence Certificate**

Examination: Writing an essay (Seminararbeit), final presentation

**Prerequisites**
None

**Competence Goal**

- The students become aware of the fundamental relations and interdependencies between rail vehicles, infrastructure and operation in a rail system.
- They overview the technical components of a rail system, in particular rail vehicle technology.
- They are able to use the essential elements of scientific work and present their results in written form and verbal presentation.

**Content**

1. Railway System: railway as a system, subsystems and interdependencies, definitions, laws, rules, railway and environment, economic impact
2. Operation: Transportation, public transport, regional transport, long-distance transport, freight service, scheduling
3. System structure of railway vehicles: structure and major systems of rail vehicles
4. Scientific working: structuring and writing of scientific papers, literature research, scheduling (mile stones), self-management, presentation skills, using the software Citavi for literature and knowledge management, working with templates in Word, giving and taking feedback
5. The learnt knowledge regarding scientific writing is used to elaborate a Seminararbeit. To this the students create a presentation, train and reflect it and finally present it to an auditorium.

**Workload**

Regular attendance: 21 hours
Self-study (writing Seminararbeit): 65 hours
Final presentation (including preparation): 4 hours
Total: 90 hours = 3 ECTS

**Learning type**
Essay

</tbody>
</table>

**Mandatory**

**Competence Certificate**
The examination consists of a written journal article and an oral presentation of the student’s work, both given in English. The overall impression is rated.

**Prerequisites**
none

**Competence Goal**
After completion of the seminar, students are able to independently familiarize themselves with a new research topic, recapitulate the corresponding literature and present the topic in the form of a review journal article as well as an oral overview presentation. Besides the exposure to new scientific research topics, the students will develop their know-how in scientific presentations and scientific writing in English which are key competences for their future (e.g. MSc thesis projects and research).

**Content**
We are offering an advanced seminar on „Novel Concepts for Solar Energy Harvesting“ for students curious in latest research topics on devices, materials and physics of next generation solar energy harvesting. The students will get the opportunity to familiarize themselves with a state-of-the-art research topic of their choice under the guidance of a mentor and present the topic during the seminar. The students must attend the seminar regularly, present the research topic in a 30-min scientific talk and submit a short scientific paper (3-5 pages). The seminar addresses master students from electrical engineering, physics, mechanical engineering, material science, KSOP and related MSc programs.

**Module grade calculation**
The module grade results of the assessment of the written paper and the oral presentation. Details will be given during the lecture.

**Workload**
1. participation in the seminar lectures: 22,5 h
2. preparation of the seminar presentation: 50 h
3. preparation of the journal article: 47,5 h

**Recommendation**
Good knowledge of semiconductor components/optoelectronics is desirable.
6.203 Module: Seminar on Quantum Detectors and Sensors [M-ETIT-105607]

<td></td>
</tr>
</tbody>
</table>

**Prerequisites**

none
Competence Certificate
The performance evaluation takes place by means of an overall examination according to § 4 Paragraph 2 No. 3 SPO-MA-2015, 2018 of the selected courses, the sum total of which fulfills the minimum requirement of course credits.

The examination takes place in the form of submission of a written report (paper) along with an oral presentation of the individual work.

Both are taken into account, while grading the examination performance. The overall impression will be evaluated.

Prerequisites
none

Competence Goal
The students are provided with an overview of a broad range of topics in the field of radio frequency engineering. You are in a position to work independently in the following areas: carrying out literature research, the art of holding lectures and presentations and writing research papers. You can work in a self-organized manner and acquire communicative, organizational and initial-level didactic skills. You are given the opportunity to work independently on a radio frequency engineering topic, to analyze the topic and present it in front of an expert audience.

Content
The seminar in particular offers the opportunity to learn and sharpen the skills of holding lectures and oral presentations, conducting literature research and writing research papers. Although these skills constitute a decisive qualification in the professional life, they are seldom promoted in other courses. The seminar provides a remedial action in this regard: each participant works independently on a topic (predominantly in English language) and presents it in front of an expert audience. In the final discussion, besides technical aspects, presentation style and written report are also taken into consideration.

Apart from presenting the topic, the required written report in LaTeX provides an excellent preparation for fulfilling the requirements of scientific and technical thesis works.

Module grade calculation
The course grade is calculated on the basis of the presentation as well as the written report. Both are taken into account for the performance evaluation. An assessment will be made based on the overall impression.

Workload
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

- Literature research: 40 h
- Writing of the paper: 40 h
- Presentation including preparation: 40 h

A total of 120 h = 4 LP

Recommendation
Knowledge of fundamentals of radio frequency engineering are helpful.

**Responsible:** Prof. Dr. Dorothea Wagner  
**Organisation:** KIT Department of Informatics

**Competence Certificate**

Type of Examination: written exam

Duration of Examination: 120 Minutes

Modality of Exam: One written exam at the end of each semester.

**Prerequisites**

Students not allowed to take either of the following modules in addition to this one: „Solarenergie“ (M-ETIT-100476) and „Photovoltaik“ (M-ETIT-100513).

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The module M-ETIT-100513 - Photovoltaics must not have been started.

**Competence Goal**

The students:

- understand the basic working principle of pn-junction solar cells,
- learn about the different kinds of solar cells (crystalline and amorphous silicon, CIGS, Cadmium telluride, organic, dye-sensitized solar cells, etc.),
- get an overview over upcoming third-generation photovoltaic concepts,
- receive information on photovoltaic modules and module fabrication,
- develop an understanding of solar cell integration and feeding the electrical power to the grid,
- get insight into solar concentration and tandem solar cells for highly efficient energy conversion,
- compare photovoltaic energy harvesting with solar thermal technologies
- understand the environmental impact of solar energy technologies.

Die Studentinnen und Studenten können in englischer Fachsprache sehr gut kommunizieren.

**Content**

I. Introduction: The Sun

II. Semiconductor fundamentals

III. Solar cell working principle

IV. First Generation solar cells: silicon wafer based

V. Second Generation solar cells: thin films of amorphous silicon, copper indium gallium diselenide, cadmium telluride, organic photovoltaics and dye sensitized solar cells

V. Third Generation Photovoltaics: high-efficiency device concepts incl. tandem solar cells

VI. Modules and system integration

VII. Cell and module characterization techniques

VIII. Economics, energy pay-back time, environmental impact

IX. Other solar energy harvesting processes, incl. thermal and solar fuels

X. Excursion
Module grade calculation
The module grade is the grade of the written exam.

Workload
Total 180 h, thereof 60h contact hours (45h lecture, 15h problems class), and 120h homework and self-studies

Recommendation
Knowledge of optoelectronics is a prerequisite, e.g. M-ETIT-100480 – Optoelektronik.

Literature
P. Würfel: Physics of Solar Cells
V. Quaschning: Renewable Energy Systems
Module: Spaceborne Radar Remote Sensing [M-ETIT-103042]

| Responsible: Prof. Dr.-Ing. Thomas Zwick |
| Organisation: KIT Department of Electrical Engineering and Information Technology |
| Part of: Interdisciplinary Subject |

### Mandatory

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
<th>Grade</th>

<td>Spaceborne Radar Remote Sensing</td>
<td>6 CR</td>
<td>6 CR</td>
<td>Each summer term</td>
<td>1 term</td>
<td>English</td>
<td>4</td>
<td>1</td>
</tr>
</tbody>
</table>

**Competence Certificate**

Success control is carried out as part of a written overall examination (120 minutes) of the selected courses, which in total meet the minimum requirement for LP.

**Written**

**Prerequisites**

"M-ETIT-100426 - Spaceborne SAR Remote Sensing" is not allowed to be started or to be completed.

**Competence Goal**

The students obtain a sound knowledge on the fundamentals, theory and applications of spaceborne radar systems. They understand the principle and function of synthetic aperture radars (SAR). They are able to explain the theory, techniques, algorithms for data processing and system concepts as well as to report on several application examples.

**Content**

The lecture is interdisciplinary and well suited for students interested in learning different aspects of the entire end-to-end system chain of spaceborne radar systems. Today, Synthetic Aperture Radar (SAR) systems are generating images of the Earth’s surface with a resolution better than 1 meter. Due to their ability to produce high-resolution radar images independent of sunlight illumination and weather conditions, SAR systems have demonstrated their outstanding capabilities for numerous applications, ranging from environmental and climate monitoring, generation of three-dimensional maps, hazard and disaster monitoring as well as reconnaissance and security related applications. We have entered a new era of spaceborne and airborne SAR systems. New satellite systems like TerraSAR-X and TanDEM-X provide radar images with a resolution cell of more than a hundred times better than the one of conventional SAR systems. The lecture will cover all aspects of spaceborne radar systems including an overview of new technologies, applications and future developments.

Supporting the main lecture, exercise assignments are distributed to the students. The exercise solutions are presented and discussed in detail during lecture hall exercises. Further dedicated topics are explained to deepen the understanding of the main lecture contents.

The aim of the computer-workshop is to gain practical experience on radar systems using data and parameter simulations which are based on the evaluation of simplified models.

**Module grade calculation**

Reports (answers) that are submitted as part of the SAR calculator workshop (approx. Two weeks after the workshop) can improve the grade.

The grade formation results from the written exam and a grade bonus for the computer workshops.

**Note bonuses**

Reports (answers) that are submitted as part of the SAR calculator workshop (approx. Two weeks after the workshop) are evaluated and are included in the grade bonuses. The maximum grade is 0.4 grade points, but will only be taken into account when passing exams. The exact value of the grade bonus is calculated in proportion to the evaluated workshop reports. The evaluation of the reports and the award of the bonus performance is carried out by an examiner in the sense of § 18 paragraphs 2 and 3 and is documented in ILIAS.

**Annotation**

Actual information can be found at the internet page of the IHE (www.ihe.kit.edu).
**Workload**
Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. Workload (for a lecture)
- Attendance time in lectures, exercises: 60 h
- Present study time computer exercise: 40 h
- Self-study time including exam preparation: 80 h
A total of 180 h = 6 LP

**Recommendation**
Signal processing and radar fundamentals.

**Literature**
Material to the lecture can be found online at www.ihe.kit.edu/VorlesungenSS_892.php or ftp://sar-lectures@www.microwaves-and-radar.dlr.de (Password required).

**Competence Certificate**

This module consists of an approx. 60-minute written exam on the contents of the Entrepreneurship lectures, as well as 5 other types of exams on the contents of the seminar Entrepreneurship and Innovation Lab in the form of term papers and presentations. All exams results are graded.

In addition, smaller, ungraded term papers are due during the course to monitor progress.

**Prerequisites**

An application is required to participate in this module. Information about the application: [www.kit-student-innovation-lab.de/index.php/for-students/](http://www.kit-student-innovation-lab.de/index.php/for-students/)
### Competence Goal

#### Personal competence

- **Reflection faculty:**
  The students are able to analyze, evaluate and develop an alternative for action for certain elements of action in social interaction.

- **Decision-making ability:**
  The students are able to prepare a decision template in time and to provide the necessary arguments for alternative decisions and therefore are able to decide in time.

- **Interdisciplinary teamwork:**
  The students are able to detect their limits of competence in one domain and to adjust to a the non-specialist domain. The students are able to detect a lack in competence and to compensate this lack via competences of other team members. The students are able to communicate their domain-specific knowledge and develop a basic understanding of other domains.

- **Value-based action:**
  The students are able to use selected psychological tools to determine their own values. They are able to match these values with team members and reflect if their offer fits these values.

#### Social competence

- **Ability to cooperate:**
  The students are able to analyze and judge their cooperative behavior in a group.

- **Communication competence:**
  The students are able to present their information in persuasive, focused and target group oriented way.

- **Ability to deal with conflicts:**
  The students are able to detect conflicts in advance, analyze them and name solution concepts.

#### Innovation and entrepreneurship competence

- **Agile product development:**
  The students are able to apply methods of agile product development e.g. Scrum.

- **Methodical innovation retrieval:**
  The students are able to conduct processes for user- and technology-centered innovation to develop sustainable value propositions for certain target groups (e.g. Design Thinking (DT), Technology Application Selection (TAS)-process).

- **Orientation on management of new technology-based firms (NTBF):**
  The students are able to name central concepts of intellectual propery and legal structures. The students are able to name the most important tasks of entrepreneurial leadership. They are able to name the most common form of business modeling and to setup a business plan. The students know important approaches to establish an organization. The students are able to determine the ownership structure in an investment situation. The students are able to name marketing concepts and setup a business model.

- **Generate investment readiness:**
  The students are able to setup rudimentary revenue and cost plan. Furthermore, they are able to establish a project plan for a company in order to derive an investment plan. The students are able to present their business proposal to investors and develop empathy for the investors.

- **Competence to develop a business model:**
  The students are able to apply respective tools for business modeling e.g. Business Model Canvas. The students are able to develop and assess alternative business models.

- **Risk handling:**
  The students are able to name basic risks w.r.t. requirements, technical limitations and profitability. The students are able to apply methods of customer interaction for evaluation of requirements and willingness to pay. The students are able to setup a rudimentary competitors analyze. The students are able to name and identify risks and present potential reactions.

#### Systemic technical competence

- **Problem solution competence:**
  The students are able to analyze, assess and structurally solve a technical problem.

- **Agile methodology of system development:**
  The students are able to name and apply different system development processes.

- **Validation in volatile environment:**
  The students are able to conduct technical and economical validation under volatile constraints. For this, they are able to name the constraints and interpret the results of the validation.

- **Functional decomposition:**
  The students are able to identify, interpret and derive functional requirements from complex customer needs.

- **Architecture development:**
  The students are able to recognize coherences from the functional requirements and derive a suitable system architecture.
Content
This module strives to combine technical, social and personal competences from the technical and entrepreneurial domain. The objective is to prepare students as best as possible for entrepreneurial activity within or outside of an established organization. Our teaching methods are research-based with a practical orientation.

The lecture Entrepreneurship as the essential component offers the theoretical basis and provides insight in important theoretical concepts and empirical evidence. Currently released case studies and practical experiences of successful founders support the theoretical and empirical content. In order to run a company for the long term additional knowledge is important. That’s why the lecture also teaches basic principles for opportunity recognition, business modeling, an introduction to entrepreneurial marketing and leadership. Customer-based design methods from the lean startup approach as well as methods of technology-centered innovation are presented. Future founders have to be able to develop and handle resources such as financial and human capital, infrastructure and intellectual property. Further aspects tackle the establishment of an organization and funding of the own project.

The knowledge taught in the lecture Entrepreneurship will be applied in an application-oriented seminar and the labs. Hence we use an action learning approach to extend the taught knowledge by practical skills and reflection capabilities. In an team of five, the students will experience their way from the ideation process to the final pitch in front of investors.

The students are able to choose between the following options concerning the labs:

- The Automation Innovation Lab offers drones as an innovation platform for cooperative swarm solutions.
- The Industry 4.0 Innovation Lab enables innovation in the context of the next industrial revolution via mobile robot platforms.
- In the Interconnected Intelligent Systems Lab innovations in the context of Assisted Living and Smart Housing are enabled by providing a rich assembly set of mobile robots, actuators and sensors.
- The Computer Vision for Health Lab offers a selection of state-of-the-art imaging devices and powerful computing hardware for innovative image-based applications for medicine and healthcare.

The module also presents methods of agile system development (Scrum) along with associated validation methods as well as methods for functional prototyping. Gate plans are used within the module to determine the progress of the project. Methods for single person work and teamwork are presented and applied. Additionally group-specific knowledge of the different roles of team members, solutions to conflict situations and interdisciplinary teams are presented.

Module grade calculation
The module grade consists of the written exam of the Lecture Entrepreneurship (40%), of the submissions and presentation of the Innovation Lab (40%) and of the submissions and presentation of the SIL Entrepreneurship Project (20%).

Annotation
Related courses:
Lecture Entrepreneurship
Seminar Entrepreneurship Project
Innovation Labs
Please note that the courses must be booked in parallel.

Related exams:
Written exams covering the content of lecture Entrepreneurship
Presentation of the Value Profile (seminar Entrepreneurship)
Submission of the Business Plan (seminar Entrepreneurship)
Submission of a Technical Report with requirements list and system architecture (Innovation Lab)
Submission of the reflection of the Gate Plans (Innovation Lab)
Presentation of the High-fidelity (Innovation Lab)

Workload
Lecture Entrepreneurship: 32h attendance time, 48h preparation and follow-up time, 10h preparation time for assessment
Seminar Entrepreneurship: 34h attendance time, 3h preparation and follow-up time, 53h preparation time for assessment.
Innovation Lab: 8h attendance time, 213h preparation and follow-up time, 49h preparation time for assessment.
This results in a total of 450 hours and a total of 15 LPs for both semesters (15*30/2 = 225).

Recommendation
It is recommended to attend the lecture Entrepreneurship at the same time as the seminar Entrepreneurship Project and the Innovation Lab in the winter semester.
6.213 Module: Supplementary Studies on Culture and Society [M-ZAK-106235]

**Responsible:** Dr. Christine Mielke
Christine Myglas

**Organisation:**
Part of: Additional Examinations

<table>
<thead>

**Election notes**
With the exception of the final oral exam and the practice module, students have to self-record the achievements obtained in the Supplementary Studies on Culture and Society in their study plan. ZAK records the achievements as "non-assigned" under "UIQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at https://campus.studium.kit.edu/ and on the ZAK homepage at https://www.zak.kit.edu/begleitstudium-bak.php. The title of the examination and the amount of credits override the modules placeholders.

If you want to use ZAK achievements **both for your interdisciplinary qualifications and for the supplementary studies**, please record them in the interdisciplinary qualifications first. You can then get in contact with the ZAK study services (stg@zak.kit.edu) to also record them in your supplementary studies.

In the in-depth module, achievements have to be obtained in three different areas. The areas are as follows:

- Technology & Responsibility
- Doing Culture
- Media & Aesthetics
- Spheres of Life
- Global Cultures

You have to obtain two achievements with 3 credits each and one achievement with 5 credits. To self-record achievements in the in-depth module, you first have to elect the matching partial achievement.

**Note:** If you registered for the Supplementary Studies on Sustainable Development before April 1st, 2023, self-recording an achievement in this module counts as a request in the sense of §20 (2) of the regulations for the Supplementary Studies on Culture and Society. Your overall grade for the supplementary studies will thus be calculated as the average of the examination grades, not as the average of the module grades.

**Mandatory**

**Competence Certificate**
The monitoring is explained in the respective partial achievement.
They are composed of:

- minutes
- presentations
- a seminar paper
- an internship report
- an oral examination

After successful completion of the supplementary studies, the graduates receive a graded certificate and a KIT certificate.
Prerequisites
The offer is study-accompanying and does not have to be completed within a defined period of time. Enrolment or acceptance for graduation must be present when registering for the final examination.

KIT students register for the supplementary studies by selecting this module in the student portal and self-checking a performance. In addition, registration for the individual courses is necessary, which is possible shortly before the beginning of each semester.

The course catalogue, statutes (study regulations), registration form for the oral exam, and guides for preparing the various written performance requirements can be found as downloads on the ZAK homepage at www.zak.kit.edu/begleitstudium-bak.

Competence Goal
Graduates of the Supplementary Studies on Culture and Society demonstrate a sound basic knowledge of conditions, procedures and concepts for analysing and shaping fundamental social development tasks in connection with cultural topics. They have gained a well-founded theoretical and practical insight into various cultural studies and interdisciplinary topics in the field of tension between culture, technology and society in the sense of an expanded concept of culture.

They are able to place the contents selected from the specialization module in the basic context as well as to analyse and evaluate the contents of the selected courses independently and exemplarily and to communicate about them scientifically in written and oral form. Graduates are able to analyse social topics and problem areas and critically reflect on them in a socially responsible and sustainable perspective.

Content
The Supplementary Studies on Culture and Society can be started from the 1st semester and is not limited in time. It comprises at least 3 semesters. The supplementary studies are divided into 3 modules (basics, in-depth studies, practice). A total of 22 credit points (ECTS) are earned.

The thematic elective areas of the supplementary studies are divided into the following 5 modules and their sub-topics:

Block 1Technology & Responsibility
Value change / ethics of responsibility, technology development / history of technology, general ecology, sustainability

Block 2Doing Culture
Cultural studies, cultural management, creative industries, cultural institutions, cultural policy

Block 3Media & Aesthetics
Media communication, cultural aesthetics

Block 4Spheres of Life
Cultural sociology, cultural heritage, architecture and urban planning, industrial science

Block 5Global Cultures
Multiculturalism / interculturalism / transculturalism, science and culture

Module grade calculation
The overall grade of the supplementary studies is calculated as an average of the grades of the examination performances weighted with credit points.

In-depth Module

- presentation 1 (3 ECTS)
- presentation 2 (3 ECTS)
- seminar paper incl. presentation (5 ECTS)
- oral examination (4 ECTS)
Annotation
With the Supplementary Studies on Culture and Society, KIT provides a multidisciplinary study offer as an additional qualification, with which the respective specialized study program is supplemented by interdisciplinary basic knowledge and interdisciplinary orientation knowledge in the field of cultural studies, which is becoming increasingly important for all professions.

Within the framework of the supplementary studies, students acquire in-depth knowledge of various cultural studies and interdisciplinary subject areas in the field of tension between culture, technology and society. In addition to high culture in the classical sense, other cultural practices, common values and norms as well as historical perspectives of cultural developments and influences are considered.

In the courses, conditions, procedures and concepts for the analysis and design of fundamental social development tasks are acquired on the basis of an expanded concept of culture. This includes everything created by humans - also opinions, ideas, religious or other beliefs. The aim is to develop a modern concept of cultural diversity. This includes the cultural dimension of education, science and communication as well as the preservation of cultural heritage. (UNESCO, 1982)

According to § 16 of the statutes, a reference and a certificate are issued by the ZAK for the supplementary studies. The achievements are also shown in the transcript of records of the degree program and, upon request, in the certificate. They can also be recognized in the interdisciplinary qualifications (see elective information).

Workload
The workload is made up of the recommended number of hours for the individual modules:

- basic module approx. 90 h
- in-depth module approx. 340 h
- practical module approx. 120 h

Total: approx. 550 h

Learning type
- lectures
- seminars
- workshops
- practical course

Literature
Recommended reading of primary and specialized literature will be determined individually by each instructor.
6.214 Module: Supplementary Studies on Sustainable Development [M-ZAK-106099]

Election notes
With the exception of the final oral exam, students have to self-record the achievements obtained in the Supplementary Studies on Sustainable Development in their study plan. ZAK records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at https://campus.studium.kit.edu/ and on the ZAK homepage at https://www.zak.kit.edu/begleitstudium-beNe. The title of the examination and the amount of credits override the modules placeholders.

If you want to use ZAK achievements both for your interdisciplinary qualifications and for the supplementary studies, please record them in the interdisciplinary qualifications first. You can then get in contact with the ZAK study services (stg@zak.kit.edu) to also record them in your supplementary studies.

In the elective module, you need to obtain 6 credits worth of achievements in two of the four areas:

- Sustainable Cities & Neighbourhoods
- Sustainable Assessment of Technology
- Subject, Body, Individual: The Other Side of Sustainability
- Sustainability in Culture, Economy & Society

Usually, two achievements with 3 credits each have to be obtained. To self-record achievements in the elective module, you first have to elect the matching partial achievement.

Note: If you registered for the Supplementary Studies on Sustainable Development before April 1st, 2023, self-recording an achievement in this module counts as a request in the sense of §19 (2) of the regulations for the Supplementary Studies on Sustainable Development. Your overall grade for the supplementary studies will thus be calculated as the average of the examination grades, not as the average of the module grades.

Mandatory
T-ZAK-112345 Basics Module - Self Assignment BeNe 3 CR Myglas

Elective Module (Election: at least 6 credits)
T-ZAK-112347 Elective Module - Sustainable Cities and Neighbourhoods - Self Assignment BeNe 3 CR

Mandatory
T-ZAK-112346 Specialisation Module - Self Assignment BeNe 6 CR Myglas
T-ZAK-112351 Oral Exam - Supplementary Studies on Sustainable Development 4 CR
Competence Certificate
The monitoring is explained in the respective partial achievement.
They are composed of:

- protocols
- a reflection report
- presentations
- presentations
- the elaboration of a project work
- an individual term paper

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by ZAK.

Prerequisites
The course is offered during the course of study and does not have to be completed within a defined period of time. Enrollment is required for all performance assessments of the modules of the supplementary studies. Participation in the supplementary studies is regulated by § 3 of the statutes.

KIT students register for the supplementary studies by selecting this module in the student portal and self-booking a performance. Registration for courses, performance assessments and examinations is regulated by § 6 of the Statutes and is usually possible shortly before the beginning of the semester.

The course catalogue, statutes (study regulations), registration form for the oral exam and guidelines for preparing the various written performance requirements can be found as downloads on the ZAK homepage at http://www.zak.kit.edu/begleitstudium-bene.

Competence Goal
Graduates of the supplementary studies in sustainable development acquire additional practical and professional competencies. Thus, the supplementary study program enables the acquisition of basics and initial experience in project management, trains teamwork skills, presentation skills and self-reflection, and also creates a fundamental understanding of sustainability that is relevant for all professional fields.

Graduates are able to analyse social topics and problem areas and critically reflect on them in a socially responsible and sustainable perspective. They are able to place the contents selected from the modules "Elective" and "Advanced" in the basic context as well as to independently and exemplarily analyse and evaluate the contents of the selected courses and to scientifically communicate about them in written and oral form.

Content
The supplementary study program Sustainable Development can be started from the 1st semester and is not limited in time. The wide range of courses offered by ZAK makes it possible to complete the program usually within three semesters. The supplementary studies comprise 19 credit points (LP). It consists of three modules: Basic Module, Elective Module and Advanced Module.

The thematic elective areas of the supplementary studies are divided into the following 4 modules and their subtopics in Module 2 (elective module):

Block 1  Sustainable Cities and Neighbourhoods
The courses provide an overview of the interaction of social, ecological, and economic dynamics in the microcosm of the city.

Block 2  Sustainability Assessment of Technology
Mostly based on ongoing research activities, methods and approaches of technology assessment are elaborated.

Block 3  Subject, Body, Individual: The other Side of Sustainability
Different approaches are presented to the individual perception, experience, shaping and responsibility of relationships to the environment and to oneself.

Block 4  Sustainability in Culture, Economy & Society
Courses usually have an interdisciplinary approach, but may also focus on one of the areas of culture, economics or society, both in application and in theory.

The core of the supplementary studies is a case study in the specialization area. In this project seminar, students conduct sustainability research with practical relevance themselves. The case study is supplemented by an oral examination with two topics from module 2 (elective module) and module 3 (in-depth module).
Module grade calculation
The overall grade of the supplementary studies is calculated as an average of the grades of the examination performances weighted with credit points.

Elective module
- Presentation 1 (3 ECTS)
- Presentation 2 (3 ECTS)

Advanced module
- individual term paper (6 ECTS)
- oral examination (4 ECTS)

Annotation
The Supplementary Studies on Sustainable Development at KIT is based on the conviction that a long-term socially and ecologically compatible coexistence in the global world is only possible if knowledge about necessary changes in science, economy and society is acquired and applied.

The interdisciplinary and transdisciplinary Studies on Sustainable Development enables diverse access to transformation knowledge as well as basic principles and application areas of sustainable development. According to the statutes § 16, a certificate is issued by the ZAK for the complementary studies.

The achievements are also shown in the transcript of records of the degree program and, upon request, in the certificate. They can also be recognized in the interdisciplinary qualifications (see elective information).

In the specialised studies, modules and partial achievements can be recognised within the framework of the additional achievements or e.g. the interdisciplinary qualifications. This must be regulated via the respective subject study programme.

The focus is on experience- and application-oriented knowledge and competences, but theories and methods are also learned. The aim is to be able to represent one's own actions as a student, researcher and later decision-maker as well as an individual and part of society under the aspect of sustainability.

Sustainability is understood as a guiding principle to which economic, scientific, social and individual actions should be oriented. According to this, the long-term and socially just use of natural resources and the material environment for a positive development of global society can only be addressed by means of integrative concepts. Therefore, "education for sustainable development" in the sense of the United Nations programme plays just as central a role as the goal of promoting "cultures of sustainability". For this purpose, practice-centred and research-based learning of sustainability is made possible and the broad concept of culture established at ZAK is used, which understands culture as habitual behaviour, lifestyle and changing context for social actions.

The supplementary study programme conveys the basics of project management, trains teamwork skills, presentation skills and self-reflection. Complementary to the specialised studies at KIT, it creates a fundamental understanding of sustainability, which is important for all professional fields. Integrative concepts and methods are essential: in order to use natural resources in the long term and to shape the global future in a socially just way, not only different disciplines, but also citizens, practitioners and institutions must work together.

Workload
The workload is made up of the number of hours of the individual modules:

- Basic module approx. 180 h
- Elective module approx. 150 h
- Consolidation module approx. 180 h

Total: approx. 510 h

Learning type
- lectures
- seminars
- workshops

Literature
Recommended reading of primary and specialist literature is determined individually by the respective lecturer.
# 6.215 Module: System Integration in Micro- and Nanotechnology [M-MACH-105315]

**Responsible:** Dr. Ulrich Gengenbach  
**Organisation:** KIT Department of Mechanical Engineering  
**Part of:** Field of Specialization / Field of Specialization: Microsystems Technology (Complementary Modules)  
Interdisciplinary Subject

| T-MACH-105555 | System Integration in Micro- and Nanotechnology | 4 CR | Gengenbach |

### Competence Certificate
A performance assessment is obligatory and can be oral, a written exam, or of another kind.

### Prerequisites
None

### Competence Goal
The students acquire basic knowledge of challenges and system integration technologies from mechanical engineering, precision engineering and electronics.

### Content
- Introduction to system integration (fundamentals)
- Brief introduction to MEMS processes
- Flexures
- Surfaces and plasma processes for surface treatment
- Adhesive bonding in engineering
- Mounting techniques in electronics
- Molded Interconnect devices (MID)
- Functional Printing
- Low temperature cofired ceramics in system integration
- 3D-Integration in semiconductor technology

### Workload
The work load is about 120 hours, corresponding to 4 credit points.

### Learning type
Lecture

### Literature
- Risse, Fertigungsverfahren der Mechatronik, Feinwerk- und Präzisionsgerätetechnik, Vieweg+Teubner Verlag, Wiesbaden, 2012
- J. Franke, Räumliche elektronische Baugruppen (3D-MID), Carl Hanser-Verlag München, 2013

**Competence Certificate**
A performance assessment is obligatory and can be oral, a written exam, or of another kind.

**Prerequisites**
None

**Competence Goal**
The students acquire knowledge of novel system integration technologies and their application in microoptic and microfluidic systems.

**Content**
Introduction to system integration (novel processes and applications)
Assembly of hybrid microsystems
Packaging processes
Applications:
- Micro process engineering
- Lab-on-chip systems
- Microoptical systems
- Silicon Photonics

Novel integration processes:
- Direct Laser Writing
- Self Assembly

**Workload**
The work load is about 120 hours, corresponding to 4 credit points.

**Learning type**
Lecture

**Literature**
- N.-T. Nguyen, Fundamentals and Applications of Microfluidics, Artech House
- G. T. Reed, Silicon Photonics: An Introduction, Wiley
Module: System-on-Chip Laboratory [M-ETIT-100451]

| T-ETIT-100798 | System-on-Chip Laboratory | 6 CR | Becker, Peric |

**Competence Certificate**  
Other types of examinations

**Prerequisites**  
none

**Competence Goal**  
Students can reproduce basic knowledge of digital and analog circuit design and hardware-related software programming. In practice, students are able to apply these methods in the following areas using a current system-on-chip architecture:  
- Design of a system architecture for mixed-signal systems  
- Simulation of the designed digital and analog circuits  
- Debugging the implementations at the simulation and implementation level  
- Verification of the overall system developed through test benches

In addition, they can apply the hardware / software code design approach and can evaluate implementation targets based on the given requirements (FPGA and ASIC).

**Content**  
In the System-on-Chip Laboratory, a fully-fledged mixed-signal hardware architecture for audio playback based on a system-on-chip (SoC) is developed.  
The system design includes the creation of necessary sub-components, their integration into an overall system, and the simulation and verification of the individual components and the overall system. A prototype is implemented and tested on an FPGA basis. The integration is then prepared for a possible ASIC production. Analog circuits are also considered and designed to build an audio amplifier.

**Module grade calculation**  
The grade formation results from the combination of the processing of the exercise sheets, the evaluations during the internship and a final presentation including discussion of the results developed in the project.

**Workload**  
1. Presence time in laboratory appointments: 15 * 4 = 60 hours  
2. Preparation / post-processing: 15 * 4 = 60 hours  
3. Demonstration and integration tests: 3 * 3 = 9 hours  
4. Preparation of the final presentation: 15 hours

**Recommendation**  
- Knowledge of Verilog Hardware Description Language, e.g. from Digital Circuit Design  
- Knowledge in the design of analog circuits (amplifier circuits, stability considerations), e.g. from the Analog Circuit Design  
- Knowledge of VHDL design, e.g. from Hardware Modeling and Simulation  
- Knowledge of simulation of digital circuits, e.g. from Hardware Modeling and Simulation  
- Knowledge of hardware design processes and algorithms, e.g. from Hardware Synthesis and Optimisation
### 6.218 Module: Systems and Software Engineering [M-ETIT-100537]

**Responsible:** Prof. Dr.-Ing. Eric Sax  
**Organisation:** KIT Department of Electrical Engineering and Information Technology  
**Part of:** Interdisciplinary Subject

</table>

**Mandatory**

| T-ETIT-100675 | Systems and Software Engineering | 5 CR | Sax |

**Competence Certificate**

Written exam, approx. 120 minutes. (§4 (2), 1 SPO).

**Prerequisites**

none

**Competence Goal**

The students:

- know the most important Life Cycle and process models (including V-Model and agile methods).
- are capable of choosing a suitable method to design and evaluate complex systems.
- know the most important diagram types of hardware and software modeling languages and can design such diagrams from characterization of an application area.
- know the basic methods for quality assurance, which are needed during project development. They know the different test phases of a project and can evaluate the reliability of a system.
- They are familiar with the issues of functional safety and the standards of process evaluation.

**Content**

Major topics are techniques and methods for the design of complex electric, electronic and electronic programmable systems with software fragments and hardware fragments. The competences of the course comprise comprehensive knowledge and goal-oriented usage of state of the art modeling techniques, development processes, description techniques as well as specification languages.

**Module grade calculation**

Grades result from the written examination.

**Workload**

Each credit point (LP, Credit Points) corresponds around 25-30h of work effort of the student. Hereby we assume an average student with average performance. The workload is covered by: 1. Participating in lectures, tutorials and practical labs. 2. Preparing and wrap up of the above named units 3. Exam preparation and presence.

**Recommendation**

Participation in the lectures Digital System Design (23615) and Information Technology (23622) is advised
Module: Technical Design in Product Development [M-MACH-105318]

**Competence Certificate**
Written examination; duration approx. 1h

**Prerequisites**
None

**Competence Goal**
The students:

- acquire and possess sound design skills for use at the interface between engineer and designer.
- master all relevant human-product requirements, such as demographic/geographic and psychographic characteristics, relevant modes of perception, typical recognition contents as well as ergonomic basics.
- have a command of the procedure for designing a product, product range or product system from the structure, through form, colour and graphic design within the phases of the design process.
- have a command of the functional and structural design as well as the important human-machine interface of interface design, have knowledge of the essential parameters of a good corporate design.

**Content**
Value relevant parameters of the technical design
Basics Interface Design
Macroergonomics: Planning and concept phase
Microergonomics: Concept and design phase
Microergonomics: development phase
Best practice

**Module grade calculation**
The module grade is composed of:

1. Grade of the written examination (100%)

**Annotation**
After attending the module, students will have the knowledge of the essential fundamentals of technically oriented design, as an integral part of methodical product development.

**Workload**
1. Time of presence lecture: 21 h
2. Prepare/follow-up lecture exam preparation: 99 h
Total: 120 h = 4 LP
Learning type
Tutorial.

Module: Thermal Solar Energy [M-MACH-102388]

Responsible: Prof. Dr. Robert Stieglitz
Organisation: KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Power Engineering (Complementary Modules)
Interdisciplinary Subject
Additional Examinations

Credits: 4
Grading scale: Grade to a tenth
Recurrence: Each winter term
Duration: 1 term
Language: German
Level: 4
Version: 1

Mandatory
T-MACH-105225 Thermal Solar Energy 4 CR Stieglitz

Competence Certificate
A performance assessment is obligatory; oral exam about 30 minutes

Prerequisites
none

Competence Goal
Based on the elaboration of the basic physics knowledge of the solar irradiation, heat radiation, optics and thermal-hydraulics, the student will be able to

- select solar thermal components such as mirrors, glasses, selective absorbers and insulation materials and their manufacturing processes and to calculate and assess their performance,
- identify different collector types and to indicate their potential field of application,
- characterize the entire solar thermal collector system with respect to its performance and derive from the collector characteristics its suitability for different types of use,
- embed collectors into a technical overall system for heat (household, process heat, heat storage networks) or electricity generation (power plant), to calculate the system efficiency and independently develop the basics of its optimization.
- identify adequate thermal storage types for the temporal separation of generation and consumption, to dimension them appropriately and to integrate them into a system concept,
- evaluate solar thermal systems in their entirety (capacity, estimation of system dynamics, response behavior, efficiency) and know options for integration into networks (heat, cold, electricity).
Content
Fundamentals of thermal solar energy from solar irradiation (influence of time and place, modifications in the atmosphere) and their implementation in a collector to integration into a technical overall system. In detail:

1. **Introduction** to the energy demand and evaluation of the application potential of solar thermal energy.

2. **Primary energy source SUN**: Sun, solar constant, solar radiation (scattering, absorption in the atmosphere, direct-diffuse radiation, angular influences, radiation balance).

3. **Solar collectors**: Basic design of a collector, basics of determining the efficiency, significance of concentration and its limitations, solar thermal collector types (designs, efficiency, system technology).

5. **Momentum and heat transport**: Basic equations of single- and multi-phase transport, basic ideas of local and system engineering calculation methods, stability limits.

Optional

6. **Solar thermal low-temperature systems**: Collector variants, methods for system simulation, planning and dimensioning of systems, system-related system design and stagnation scenarios and their handling.

7. **Solar thermal high-temperature systems**: Solar thermal power plants (classification of system components, loss mechanisms, upwind power plants), coupling of collector with energy generation process.

At the end:

8. **Thermal energy storage**: Explanation of terms (energy contents, storage forms and materials, potentials ...), storage concepts (system structure, design ratio), system integration.

9. **Solar air conditioning**: Determination of cooling capacity, indoor climate, solar cooling methods and evaluation of air conditioning.

Workload
regular lecture attendance: 30 h
self-study: 60 h (incl. supplementary searches)
exam preparation 30 h

Recommendation
desirable are reliable knowledge in physics in optics and thermodynamics
Basics in heat and mass transfer, material science, energy technology and fluid mechanics

Learning type
Präsentation complemented by printouts

Literature
supply of lecture material in printed and electronic form

Mandatory
T-MACH-105237 Vehicle Lightweight Design - Strategies, Concepts, Materials 4 CR Henning

Competence Certificate
Written exam; Duration approx. 90 min

Prerequisites
none

Competence Goal
Students learn that lightweight design is a process of realizing a demanded function by using the smallest possible mass. They understand lightweight construction as a complex optimization problem with multiple boundary conditions, involving competences from methods, materials and production.

Students learn the established lightweight strategies and ways of construction. They know the metallic materials used in lightweight construction and understand the relation between material and vehicle body.

Content
Strategies in lightweight design
Shape optimization, light weight materials, multi-materials and concepts for lightweight design

Construction methods
Differential, integral, sandwich, modular, bionic

body construction
Shell, space-frame, monocoque

metallic materials
Steel, aluminium, magnesium, titan

Workload

T-MACH-102123 Virtual Engineering I 4 CR Ovtcharova

Competence Certificate

Written exam, graded, 90 min.

Competence Goal

After successful attendance of the course, students can:

- conceptualize complex systems with the methods of virtual engineering and continue the product development in different domains
- model the digital product with regard to planning, design, manufacturing, assembly and maintenance.
- use validation systems to validate product and production in an exemplary manner.
- Describe AI methods along the product creation process.

Content

- Conception of the product (system approaches, requirements, definitions, structure)
- Generation of domain-specific product data (CAD, ECAD, software, ...) and AI methods
- Validation of product properties and production processes through simulation
- Digital twin for optimization of products and processes using AI methods

**Competence Certificate**
The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately. The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

**Prerequisites**
None

**Competence Goal**
The students should:

- have basic knowledge about the industrial application of Information Technology in product development,
- have understanding about current and future application of information systems in product development processes in the context of Product Lifecycle Management and Virtual Engineering,
- be able to operate current CAX- and PLM-systems in the product development process
- understands demands and relevance of interconnected IT-systems and respective methods for product development

**Content**
The Module Virtual Engineering A gives an overview about product development processes, beginning with requirement engineering, verification of manufacturing feasibility and virtual operation in the scope of Digital Factory. The guest-lectures contained in this module complete the content of the lecture with introducing current product development processes focusing.

**Workload**

- regular attendance: 140 hours
- Preparation and reworking: 20 hours
- Exam and exam revision/preparation: 110 hours

**Learning type**
Lecture, exercise

**Competence Certificate**  
Alternative exam assessment.

**Prerequisites**  
None

**Competence Goal**  
Students are able to design and implement a complex task in teamwork using VR/MR/AR hardware and software.

**Content**  
VR/AR/MR basics (hardware, software), tools and applications

**Module grade calculation**  
Alternative exam assessment.

**Workload**  
120 hours

**Learning type**  
Project work in the team
Module: Wearable Robotic Technologies [M-INFO-103294]

**Responsible:** Prof. Dr.-Ing. Tamim Asfour
Prof. Dr.-Ing. Michael Beigl

**Organisation:** KIT Department of Informatics

**Part of:**
- Field of Specialization / Field of Specialization: Medical Technology (Complementary Modules)
- Field of Specialization / Field of Specialization: Robotics (Complementary Modules)
- Interdisciplinary Subject

**Additional Examinations**

**Competence Certificate**

See partial achievements (Teilleistung)

**Prerequisites**

See partial achievements (Teilleistung)

**Competence Goal**

The student has received fundamental knowledge about wearable robotic technologies and understands the requirements for the design, the interface to the human body and the control of wearable robots. He/she is able to describe methods for modelling the human neuromusculoskeletal system, the mechatronic design, fabrication and composition of interfaces to the human body. The student understands the symbiotic human–machine interaction as a core topic of Anthropomatics and has knowledge of state-of-the-art examples of exoskeletons, orthoses and prostheses.

**Content**

The lecture provides an overview of wearable robot technologies (exoskeletons, prostheses and orthoses) and their potentials. It starts with the basics of wearable robotics and introduces different approaches to the design of wearable robots and their related actuator and sensor technology. The lecture focuses on modeling the neuromusculoskeletal system of the human body, the interfaces of wearable robots to the human body and the physical and cognitive human-robot interaction for tightly-coupled hybrid human-robot systems. Examples of current research and various applications of lower, upper and full body exoskeletons as well as prostheses are presented.

**Workload**

Lecture with 2 SWS, 4 LP

4 LP corresponds to 120 hours, including

15 * 2 = 30 hours attendance time
15 * 3 = 45 self-study
45 hours preparation for the exam

**Recommendation**

Attending the lecture Mechano-Informatics and Robotics is recommended.

Legend: 🖥 Online, 🧩 Blended (On-Site/Online), ⌁ On-Site, ✗ Cancelled

**Competence Certificate**

Oral examination (20 min)

**Prerequisites**

The participation in "Appliance and power tool design" requires the concurrent project work.

Due to organizational reasons, the number of participants is limited. At the beginning of August, a registration form will be available at the IPEK website. In the case of too many applicants, a selection process will be taking place. An early application is advantageous.

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course T-MACH-110767 - Appliance and Power Tool Design Project Work must have been started.
7.6 Course: Appliance and Power Tool Design Project Work [T-MACH-110767]

**Competence Certificate**

The monitoring in this module includes a course credit according to § 5 section 4 in the form of minutes of which two are to be handed in freely chosen topics of the lecture series "Introduction to Applied Studies on Culture and Society". Length: approx. 6,000 characters each (incl. spaces).

**Self service assignment of supplementary stdues**

This course can be used for self service assignment of grade acquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

**Recommendation**

**Annotation**

The Basic Module consists of the lecture "Introduction to Supplementary Studies on Culture and Society", which is offered only in the winter semester. It is therefore recommended that students start their studies in the winter semester and complete them before module 2.
### Course: Basics Module - Self Assignment BeNe [T-ZAK-112345]

**Responsible:** Christine Myglas  
**Organisation:** M-ZAK-106099 - Supplementary Studies on Sustainable Development

**Competence Certificate**  
The monitoring in this module includes a course credit according to § 5 section 4:  
**Introduction to Sustainable Development** in the form of minutes of which two are to be handed in freely chosen topics of the lecture series "Introduction to Sustainable Development". Length: approx. 6,000 characters each (incl. spaces).  
or  
**Sustainability Spring Days at KIT** in the form of a reflection report on all components of the project days "Sustainability Spring Days at KIT". Length approx. 12,000 characters (incl. spaces).

**Prerequisites**  
None

**Self service assignment of supplementary studies**  
This course can be used for self service assignment of grade acquired from the following study providers:  
- Zentrum für Angewandte Kulturwissenschaft und Studium Generale  
- ZAK Begleitstudium

**Recommendation**  

**Annotation**  
Module Basics consists of the lecture "Introduction to Sustainable Development ", which is only offered in the summer semester or alternatively of the project days " Sustainability Spring Days at KIT ", which is only offered in the winter semester. It is recommended to complete the course before Elective Module an Specialisation Module.  
In exceptional cases, Elective Module or Specialisation Module can also be completed simultaneously with Basics Module. However, the prior completion of the advanced modules Elective and Specialisation should be avoided.

**Competence Certificate**

Success is checked in the form of a written test of 60 minutes. The module grade is the grade of the written exam. Bonus points can also be awarded. You can find information on this under "Module grade".

**Prerequisites**

The successful participation in the module Biomedical Measurement Techniques I is a prerequisite.

**Recommendation**

Basics in physiology. Basics in physical measurement technology, good previous knowledge of analog circuit technology and in digital signal processing.

**Annotation**

The event is based on an interactive combination of lecture parts and seminar parts. In the seminar part, the participants are asked to independently prepare and present individual topics of the course in small groups. These contributions are evaluated and the students receive bonus points for this. The bonus points are added to the points achieved in the written exam. The sum of the points gives the module grade.

Legend: Online, Blended (On-Site/Online), On-Site, Cancelled

**Competence Certificate**

The assessment consists of an oral exam (20 min) taking place in the recess period. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

**Prerequisites**

Required for the participation in the examination is the preparation of a report during the semester. The partial service with the code T-MACH-108889 must have been passed.

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course T-MACH-108889 - BUS-Controls - Advance must have been passed.

**Recommendation**

Basic knowledge of electrical engineering is recommended. Programming skills are also helpful.

The number of participants is limited. A registration is mandatory, the details will be announced on the webpages of the Institute of Vehicle System Technology / Institute of Mobile Machines. In case of too many applications, attendance will be granted based on pre-qualification.

**Annotation**

The students will get an overview of the theoretic and practical functioning of different bus systems.

After the practical oriented lessons the students will be able to visualize the communication structure of different applications, design basic systems and evaluate the complexity of programming of the complete system.

Hereunto the students program in the practical orientated lessons IFM-controllers using the programming environment CoDeSys.

**Content:**

- Knowledge of the basics of data communication in networks
- Overview of the operating mode of current field buses
- Explicit observation of the operating mode and application areas of CAN buses
- Practical programming of an example application (hardware is provided)

**Literature:**

7.31 Course: BUS-Controls - Advance [T-MACH-108889]

**Competence Certificate**  
Written examination (90 min). Additives as announced

**Prerequisites**  
passing the corresponding "Tutorial Continuum Mechanics of Solids and Fluids" (T-MACH-110333)

**Modeled Conditions**  
The following conditions have to be fulfilled:

1. The course T-MACH-110333 - Tutorial Continuum Mechanics of Solids and Fluids must have been passed.

**Annotation**  
Due to capacity reasons it is possible that not all students of this course can be admitted to the computer tutorials. Students of the bachelor's degree program in mechanical engineering who have chosen the Major Field Continuum Mechanics (SP-Nr 13) and students of the bachelor's degree program in material science and material technology will be admitted to the computer tutorials in any case.

If additional places are available in the computer tutorials for this course, these will be allocated according to the BSc average grade.

**Competence Certificate**

The examination takes place in form of other types of examination. It consists of a model library developed in the course of a semester-long project in the modeling language Modelica and a presentation of the library lasting 25 minutes. The quality of the model library is evaluated within the framework of the criteria: documentation, formal correctness, functionality, usability, HMI and modeling level of detail. The presentation is evaluated as an additional aspects. The overall impression is evaluated.

The assessment of the developed model library and the presentation of the library will be included in the module grade. More details will be given at the beginning of the course.

**Prerequisites**

none

#### Competence Certificate
The final assessment will be an oral examination (20 min) taking place during the recess period. The examination will be offered in every semester and can be repeated at any regular examination date.

#### Prerequisites
none

#### Recommendation
- General principles of mechanicals engineering
- Basic knowledge of hydraulics
- Interest in mobile machinery

#### Annotation
At the end of the lecture, participants can explain the structure and function of all discussed drive trains of mobile machines. They can analyze complex gearbox schematics and synthesize simple transmission functions using rough calculations.

#### Content:
In this course the different drive trains of mobile machinery will be discussed. The focus of this course is:

- mechanical gears
- torque converter
- hydrostatic drives
- power split drives
- electrical drives
- hybrid drives
- axles
- terra mechanics

#### Media: projector presentation

Literature: Download of lecture slides from ILIAS. Further literature recommendations during lectures.

**Competence Certificate**  
Success monitoring consists of participation in attendance modules (attendance requirement of 80%) and submission of a written reflection portfolio.

Attendance is required both to perform the work as a team on-site and to provide practical techniques and skills that cannot be learned in pure self-study.

**Prerequisites**  
Part-time work as a tutor at KIT during program participation.
7.66 Course: Elective Module - Subject, Body, Individual: the Other Side of Sustainability - Self Assignment BeNe [T-ZAK-112349]

**Organisation:**
- Part of: M-ZAK-106099 - Supplementary Studies on Sustainable Development

**Type**
- Examination of another type

**Credits**
- 3

**Grading scale**
- Grade to a third

**Version**
- 1

**Competence Certificate**
Examination of another kind according to § 7 section 7 in the form of a presentation in the selected course.

**Prerequisites**
Prerequisite for the 'Oral Examination' is the successful completion of Modules 1 and 3 and the required elective sections in Module 2.

**Self service assignment of supplementary studies**
This course can be used for self service assignment of grade acquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

**Recommendation**
The content of the Basics Module is helpful.
7.67 Course: Elective Module - Sustainability Assessment of Technology - Self Assignment BeNe [T-ZAK-112348]

**Competence Certificate**

The assessment consists of a written exam (60 minutes) (following §4(2) of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date. Depending on the respective pandemic situation, the exam may be offered as an open book exam (alternative exam assessment, following §4(2), 3 of the examination regulation).

**Prerequisites**

None

**Recommendation**

None

**Annotation**

Since 2011 the lecture is offered in winter term. Exams can still be taken in summer term.

**Competence Certificate**

The assessment consists of a written exam (60 minutes) (following §4(2), 1 of the examination regulation).

Students are offered the opportunity to earn a grade bonus through separate assignments. If the grade of the written exam is between 4.0 and 1.3, the bonus improves the grade by a maximum of one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the lecture.

**Prerequisites**

None

**Recommendation**

**Handling Characteristics of Motor Vehicles I**

**Competence Certificate**

Verbally

Duration: 30 up to 40 minutes

Auxiliary means: none

**Prerequisites**

none
### 7.90 Course: Hardware Modeling and Simulation [T-ETIT-100672]

**Responsible:**
- Dr.-Ing. Jens Becker
- Prof. Dr.-Ing. Jürgen Becker

**Organisation:**
- KIT Department of Electrical Engineering and Information Technology

**Part of:**
- M-ETIT-100449 - Hardware Modeling and Simulation

**Type**
- Written examination

**Credits**
- 4

**Grading scale**
- Grade to a third

**Recurrence**
- Each winter term

**Version**
- 1

**Competence Certificate**
Achievement is examined in the form of a written examination lasting 120 minutes.

**Prerequisites**
none

**Recommendation**
Lecture „Systems and Software Engineering“ (23605)

**Annotation**
During semester written, otherwise oral examination.
From WS 19/20 the module will be managed by Prof. Jürgen Becker and Dr. Jens Becker.
From WS 19/20 the module is offered in WS.

**Legend:** 🖥 Online, 🧩 Blended (On-Site/Online), 🗣 On-Site, 🗑 Cancelled

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course T-INFO-105142 - Humanoid Robots - Practical Course must not have been started.

**Recommendation**

- Very good programming skills in at least one high-level programming language are strongly recommended.
- Attendance of the lectures Robotics 1, Robotics 2, Robotics 3, as well as the robotics practical course are recommended.
- Project-specific recommendations (knowledge of C++, Python, ...) will be announced in the individual project descriptions

**Annotation**

- Internship dates are always by arrangement with the supervising staff member.
- An extension work of the topic as a master thesis is possible in principle.
- The number of participants in this practical course is generally limited and varies with the number of available research projects at the institute.

</tr>
</tbody>
</table>

**Competence Certificate**
At least two presentations must be given: An examination of another kind according to § 5 section 3 (3) in the form of a presentation in one of the chosen courses (3 ECT).
In a third seminar, either (a) a presentation is held (preliminary study achievement) which remains not graded and a topic-related term paper is submitted or (b) a written exam is taken.
The three courses can be selected individually from the 5 thematic blocks or – in exceptional cases and according to the agreement with the responsible lecturer – all three courses can be selected from one block in the sense of a specialization. In addition, an oral examination is taken, which relates to the content of two of the chosen three courses.

**Prerequisites**
Prerequisite for the 'Oral Examination' is the successful completion of Modules 1 and 3 and the required elective sections in Module 2.

**Self service assignment of supplementary studies**
This course can be used for self service assignment of grade acquired from the following study providers:
- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

**Annotation**
The content of the Basic Module is helpful.

oral examination (60 minutes)

**Prerequisites**
none

**Annotation**
Due to organizational reasons, the number of participants is limited. Thus a selection has to be made. For registration to the selection process a standard form has to be used, that can be downloaded from IPEK homepage from April to July. The selection itself is made by Prof. Albers in personal interviews.

**Competence Certificate**

The success control is carried out in the form of a written test of 120 minutes. If there are fewer than 20 candidates, an oral exam of around 20 minutes can alternatively take place. The module grade is the grade of the written or oral exam.

**Prerequisites**

none

**Recommendation**

Knowledge from the lectures "Metrology" or "Metrology in Mechatronics" and "Manufacturing Metrology" as well as basic knowledge of programming (e.g. in Matlab, C / C++) are helpful.

**Annotation**

Annotations

The submission of the protocols of all experiments is required for admission to the examination. The quality of the protocols is assessed; for the admission to the exam, the quality must be acceptable.

Attendance of all laboratory dates including the introductory event is required. Already in the event of a single unexcused absence, admission to the examination will not be granted.

**Competence Certificate**

The success control takes place in the form of an examination performance of a different kind. This is composed as follows:

- 50% assessment of a written examination (60 min) during the semester break
- 50% assessment of an oral examination (20 min) during the semester break

To pass the examination, both examination performances must be passed.

**Prerequisites**

None

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course T-MACH-102089 - Logistics - Organisation, Design and Control of Logistic Systems must not have been started.

**Annotation**

The brick cannot be taken if one of the bricks “T-MACH-102089 – Logistics - Organisation, Design and Control of Logistic Systems” and “T-MACH-105181 – Supply Chain Management” has been taken.

**Competence Certificate**

The success control takes place in the form of a written exam, usually 90 minutes in length, according to § 4 Abs. 2 Nr. 1 SPO.

A *bonus can be acquired through successful participation in the exercise as a success control of a different kind (§4(2), 3 SPO 2008) or study performance (§4(3) SPO 2015). The exact criteria for awarding a bonus will be announced at the beginning of the lecture. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The bonus is only valid for the main and post exams of the semester in which it was earned. After that, the grade bonus expires.*

**Prerequisites**

none.

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course T-WIWI-106340 - Machine Learning 1 - Basic Methods must not have been started.
2. The course T-INFO-110630 - Machine Learning - Basic Methods must not have been started.

**Recommendation**

- Attendance of the lecture “Foundations of Artificial Intelligence“ (“Grundlagen der Künstlichen Intelligence“)
- Knowledge in python
- Mathematics-heavy lecture. The basics will be reviewed, but mathematical proficiency is helpful.
Course: Machine Learning 1 - Basic Methods [T-WIWI-106340]

**Competence Certificate**  
The assessment (Prüfungsleistung anderer Art) consists of the following assignments:

- 40% assessment of the final case study as individual performance,
- 60% semester evaluation which includes working on 5 case studies and defending those (For both assessment types, the best 4 of 5 tries count for the final grade.):  
  - 40% assessment of the result of the case studies as group work,
  - 20% assessment of the oral examination during the case study colloquiums as individual performance.

A detailed description of the learning control can be found under Annotations.

**Prerequisites**  
one

**Recommendation**  
Recommended elective subject: Probability Theory and Statistics

**Annotation**  
Students are divided into groups for this course. Five case studies are carried out in these groups. The results of the group work during the lecture period are presented and evaluated in writing. In the oral examination during the case study colloquiums, the understanding of the result of the group work and the models dealt with in the course is tested. The participation in the oral defenses is compulsory and will be controlled. For the written submission the group receives a common grade, in the oral defense each group member is evaluated individually.

After the lecture period, there is the final case study. This case study contains the curriculum of the whole semester. The students work individually on this case study which takes place at a predefined place and time (duration: 4h).

**Competence Certificate**

To prepare the laboratory tests, each laboratory group has to do some homework together before the experiment and hand in a simple copy to the supervisor immediately before the start of the experiment. The tasks for the experiment as such are processed and logged during the implementation. The protocol should be handed over to the supervisor immediately after the experiment has been carried out. Before each experiment, there is a written exam or oral (approx. 20 min., No aids) the content of the experiment.

**Prerequisites**

none

**Recommendation**

Knowledge of microwave measurement technology and RF components and systems is helpful.

**Competence Certificate**  
The assessment of success takes place in the form of a written examination lasting 120min. The grade corresponds to the result of the written examination.

**Prerequisites**  
none

**Modeled Conditions**  
The following conditions have to be fulfilled:

1. The course T-ETIT-100971 - Nanoelectronics must not have been started.

**Recommendation**  
Successful completion of the modules "Superconductivity for Engineers" and „Einführung in die Quantentheorie für Elektrotechniker“ is recommended.
7.179 Course: Nonlinear Control Systems [T-ETIT-100980]

<td></td>
<td></td>
</tr>
</tbody>
</table>

**Prerequisites**

none

**Recommendation**

- Students should be familiar with the content of the "Foundations of Artificial Intelligence" lecture.
- Good Python knowledge is required.
- Good mathematical background knowledge is required.

**Competence Certificate**

The success control takes place in the form of a written exam, usually 90 minutes in length, according to § 4 Abs. 2 Nr. 1 SPO. A bonus can be acquired through successful participation in the exercise as a success control of a different kind (§4(2), 3 SPO 2008) or study performance (§4(3) SPO 2015). The exact criteria for awarding a bonus will be announced at the beginning of the lecture. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The bonus is only valid for the main and post exams of the semester in which it was earned. After that, the grade bonus expires.
7.225 Course: Reliability and Test Engineering [T-MACH-111840]

**Competence Certificate**

The grade is composed of the evaluation of a final report following the practical part. The assessment criteria are as follows:

- Structure of the report
- Comprehensibility and comprehensibility
- Preparation of the tests
- Use of test and reliability methods
- Formulation and answering of test hypotheses
- Test evaluation, comprehensible results

Attendance and active participation in the lab is mandatory.

**Prerequisites**

none

**Recommendation**

We strongly recommend the attendance of the MSuP lectures. Students who have not (yet) attended are recommended to learn the contents in advance.
### Course: Renewable Energy-Resources, Technologies and Economics [T-WIWI-100806]

**Competence Certificate**
The assessment consists of a written exam (60 minutes, in English, answers are possible in German or English) (following §4(2) of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date. Depending on the respective pandemic situation, the exam may be offered as an open book exam (alternative exam assessment, following §4(2), 3 of the examination regulation).

**Prerequisites**
None.
7.227 Course: Robotics - Practical Course [T-INFO-105107]

### Competence Certificate

The assessment is carried out as an examination of another type (§ 4 Abs. 2 No. 3 SPO). It is composed of several sub-tasks.

### Prerequisites

Knowledge of the programming language C++ is required.

### Modeled Conditions

You have to fulfill one of 2 conditions:

1. The course T-INFO-104545 - Practical Project Robotics and Automation I (Software) must not have been started.
2. The course T-INFO-104552 - Practical Project Robotics and Automation II (Hardware) must not have been started.

### Recommendation

<th>2117072</th>
<th>Seamless Engineering - Logistics Robotics Workshop</th>
<th>2 SWS</th>
<th>Lecture / Practice ( / )</th>
<th>Furmans, Sax</th>
</tr>
</thead>
</table>

### Competence Certificate
The assessment of success takes place in the form of a written examination as well as an examination performance of another kind.

The overall grade is composed as follows:

- 50% assessment of an examination as individual performance as the conclusion of the lecture block.
- 50% assessment of colloquia as individual performance on defined milestones during the project work

### Prerequisites
None

### Recommendation
None

### Annotation
The course consists of two components. Theoretical knowledge and basics about structured system design are taught in lecture and exercise. In parallel, a practical part takes place throughout the semester. In this, the students design and implement a mechatronic system in small groups using industry-related hardware and software to deal with a given task in the logistics environment.

**Competence Certificate**
The performance evaluation takes place by means of an overall examination of the selected courses, the sum total of which fulfills the minimum requirement of course credits. The examination takes place in the form of submission of a written report (paper) along with an oral presentation of the individual work. Both are taken into account, while grading the examination performance. The overall impression will be evaluated.

**Prerequisites**
none

**Recommendation**
Knowledge of fundamentals of radio frequency engineering are helpful.

**Prerequisites**

"T-ETIT-101949 - Spaceborne SAR Remote Sensing" is not allowed to be started or to be completed.

**Recommendation**

Signal processing and radar fundamentals.

**Annotation**

Actual information can be found at the internet page of the IHE (www.ihe.kit.edu).
Course: Specialisation Module - Self Assignment BeNe [T-ZAK-112346]

Responsible: Christine Myglas
Organisation: Part of: M-ZAK-106099 - Supplementary Studies on Sustainable Development

### Type
Examination of another type

### Credits
6

### Grading scale
Grade to a third

### Version
1

**Competence Certificate**
The monitoring occurs in the form of several supplementary courses, which usually comprise a presentation of the (group) project, a written elaboration of the (group) project as well as an individual term paper, if necessary with appendices (examination performances of other kind according to statutes § 5 section 3 No. 3 or § 7 section 7).

The presentation is usually with the accompanying practice partners, as well as the written paper.

**Prerequisites**
Active participation in all three mandatory components.

**Self service assignment of supplementary studies**
This course can be used for self service assignment of grade aquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

**Recommendation**
Knowledge from 'Basic Module ' and 'Elective Module ' is helpful.
### T.257 Course: Stochastic Information Processing [T-INFO-101366]

**Competence Certificate**

Successfully passing the Tutorial is a prerequisite for taking part in the exam "Continuum Mechanics of Solids and Fluids" (T-MACH-110377). For students of Mechanical Engineering (BSc) that have chosen the Major Field "Continuum Mechanics" and for students of Material Science and Material Technology (BSc) the prerequisites consist of successfully solving the written homework sheets as well as the computational homework sheets during the associated computer tutorials.

For students of Mechanical Engineering that have chosen a different Major Field of students from different fields of study the prerequisites consist of successfully solving only the written homework sheets.

**Prerequisites**

None

**Annotation**

Due to capacity reasons it is possible that not all students of this course can be admitted to the computer tutorials. Students of the bachelor's degree program in mechanical engineering who have chosen the Major Field Continuum Mechanics (SP-Nr 13) and students of the bachelor's degree program in material science and material technology will be admitted to the computer tutorials in any case.

If additional places are available in the computer tutorials for this course, these will be allocated according to the BSc average grade.

Competence Certificate
Written exam; Duration approx. 90 min

Prerequisites
none

Recommendation
none
Course: Virtual Engineering I [T-MACH-102123]

**Responsible:** Prof. Dr.-Ing. Jivka Ovtcharova

**Organisation:** KIT Department of Mechanical Engineering

**Part of:**
- M-MACH-101283 - Virtual Engineering A
- M-MACH-105293 - Virtual Engineering 1

**Type:** Written examination

**Credits:** 4

**Grading scale:** Grade to a third

**Recurrence:** Each winter term

**Version:** 3
